NDT Scouting LLC is dedicated to providing year round coverage of one of the fastest growing events in sports: the NFL Draft.

Since inception in the fall of 2013, NDT Scouting has grown from a one person side project into one of the industry leaders in coverage, analysis and player projection.

With a presence at the East/West Shrine Game, the Senior Bowl, the NFL Combine and more than 40 total college football games over the course of the past several seasons, NDT Scouting hits the road just like any of the 32 franchise scouting departments would.

Founder and Director of Scouting Kyle Crabbs is joined by Assistant Director Joe Marino and National Scouts Jon Ledyard, Ben Solak, Jonah Tuls, Scott Bischoff and Brandon Thorn to offer readers the absolute best in Draft coverage.

In addition to the 2018 NFL Draft Prospectus and Joe Marino's 2018 NFL Draft Prospect Portfolio, fans can watch Kyle and Joe on Draft night provide their live reactions to all of the selection. In chorus with FanRag Sports, NDT Scouting will be hosting a live stream to analyze the picks live as they happen.

This production enters it's second consecutive year, interested views are able to tune in by going to either www.ndtscouting.com or www.fanragsports.com for Thursday and Friday evenings.

Welcome!
This year marks the 5th annual edition of the NFL Draft Prospectus, and things have changed quite a bit since I last published a copy. At this time last year, we were just starting our new ventures in a partnership with FanRag Sports. Fast forward a year later and NDT Scouting is bigger and better than ever before.

If you're new to the Prospectus, welcome to my pride and joy. This is the culmination of 10 months of hard work, long hours and many, many cups of coffee. My scouting process is centered on film study, with some complimentary weighted metrics aimed at serving as checks and balances for the players in question.

I have used this approach since the 2014 NFL Draft and feel strongly that this approach to player assessment can provide great context, allowing you, our readers, the most unique NFL Draft experience on the market.

With another 300 players at your fingertips, the 2018 NFL Draft Prospectus is my most developed work to date and features the players involved in what should be the most wild NFL Draft I've covered throughout the course of my 5 year career.

This amount of work does not come together without the help of a great deal of people, who you will learn more about in my thank yous and acknowledgements on our final page.

I would like to formally thank you for your investment in NDT Scouting and, without further delay, welcome you to dig in!

Welcome to the 2018 NFL DRAFT PROSPECTUS!
Sincerely,

Comparing Evaluation Values on 2015-2018 Prospectus Big Boards $\times 2018.00 \cdot 2017.00 \cdot 2016.00 \times 2015.00$

The 2018 NFL Draft faces some misconceptions, many of which were molded during the first few impactful months of the college football season.

Among them, that this class isn't very good. When comparing my evaluation scores (left) to the past three Draft classes, the only way this 2018 class fails to measure up is to the depth of last year. The top talents in the 2018 class are the best we've seen since 2014, when Jadeveon Clowney, Jake Matthews, Khalil Mack and Anthony Barr all sat atop my personal Draft board.

Of course the real value in that class came a bit later with Odell Beckham Jr. and Aaron Donald, but the point stands: the combination of Saquon Barkley, Quenton Nelson, Bradley Chubb, Tremaine Edmunds, Connor Williams, Baker Mayfield and others as impressive a group of top prospects we've seen since 2014.

And against an average class, the depth into Day 2 is fine as well. But 2017's mid-round depth is a class of it's own.

The Day 3 value of the 2018 NFL Draft class is strong, particularly the players scoring a 5 th round value. There are 58 players scoring with a RD5 value, their expectation lies as high quality specialists, spot starters or raw prospects with high upside. This includes notable prospects such as Wyoming QB Josh Allen, Florida State CB Tarvarus McFadden, Kansas DE Dorance Armstrong, Florida WR Antonio Callaway, Stanford DT Harrison Phillips and others. Each of these players at some point has been touted as a potential first round prospect, but such a declaration is centered on the upside of the prospect, there's no guarantee any of these players will find their lofty ceilings with so much development required.

The QB group is a special one. There's five high ceiling passers, Mayfield, Rosen, Jackson, Darnold and Allen. Each of the five are likely to go in the 1 st round, even if not all five should. The infusion of high ceilings is needed as the NFL braces for a changing of the guard at Quarterback.

The RB group boasts the most physically impressive back (or player) I've ever seen. Saquon Barkley is the cream of the crop, but Nick Chubb, Derrius Guice, Ronald Jones II and Sony Michel all have three down upside. There's a good deal of niche ball carriers as well and impressive pass catchers out of the backfield, great news for the teams trying to keep up with the recent trends of the NFL.

The WR group is lacking elite talent but has elite upside. Entering the NFL Combine, there were 6 receivers mathematically eligible to be declared WR1. The crown went to Courtland Sutton, whose ceiling I liken to Terrell Owens. Anthony Miller, DJ Moore, Calvin Ridley, Christian Kirk and James Washington were close and reflect the Day 2 value at WR.

The TE group has always been about one guy for me. Dallas Goedert never got the chance to test, but he's the next new age TE. There's some one dimensional prospects in the pool as well, blockers like Marcus Baugh/Dalton Schultz and receivers like Mark Andrews and Mike Gesicki will offer niche value all the way through the Draft order.

The OL group has a lot more high ceiling prospects than what I've seen from my colleagues. There's more immediate starters in the interior (Nelson, Wynn, Corbett, Mason Cole, Price, Hernandez, Braden Smith and more) than at Tackle.

The DL group is thin on the edges, particularly in top talent. It's Bradley Chubb and Harold Landry, then everyone else. There's talent in the pass rush pool, but the question is what red flags are going to insurmountable hurdles for prospects? The inside is much like the offensive side of the ball, where there are a lot of plug in starters. Vita Vea, Maurice Hurst, Taven Bryan, Nathan Shepherd and Da'Ron Payne are all disruptive front line defenders who could start early.

The LB group, to my eye, is one of the deepest in the class. There's a good deal of athletic defenders who can play in space, a development that is a sign of the times as more spread offenses put more stress and pressure on the athletes on the second level. Roquan Smith and Tremaine Edmunds are blue chippers who can be the face of a defense, but the depth extends well beyond them.

The CB group has a lot of scheme specific players, without a lot of universal defenders. The best bet for a player to plug and play in any system is Jaire Alexander, where as his fellow CB1 (they tied at 7.83) Denzel Ward has some size limitations that will handcuff him if a team hopes to play him in the face against bigger, stronger receivers.

The SAF group is better at the top than what we've seen in most seasons, although Jamal Adams may have something to say about that. Both Minkah Fitzpatrick and Derwin James are aggressive and versatile, they can add a fresh dynamic on the back end and offer a lot of versatility for defensive coaches. But don't' sleep on Justin Reid (Stanford) and Jessie Bates III (Wake Forest), who are long and rangy, both showing impressive ball skills of their own.

Leadership Metric:

Teams care about leadership. Team captains are a noted footnote on reports. Character and background are of course factored separately, but being recognized as a leader of the team and having experience with the game is vital to some evaluators.

## It's factored here

 between three separate factors: If elected captain, career starts and winning success.Winning is a culture.

## PSAR Metric:

In the past, I have conducted a Size metric and an Athleticism metric. Last year marked a change in that methodology; as I've normalized athleticism scores by using a player's historical size as a multiplier to their athletic prowess.

The "Physical Size and Athleticism" (PSAR) Metric calculates how well a player has performed against a historical data set of prospects at the same position through a number of NFL Combine tests.

Their size component is calculated the same way: where does their height, weight, arm length (as needed), etc. score in relation to the past decade plus of prospects at the same position.

## Prospect Summary and Tagging

A player's summary will include an NFL comparison, a distinction of best and worst traits, plus an explanation of what scheme and system each prospect would fit best into.

Positional bonuses are also assigned to the "premiere" positions in the game. High impact positions such as Quarterbacks and Pass Rushers are granted the highest bonus.

Red flags off the field are tagged as needed. I do not deduct points for a red flag, but rather acknowledge their existence as a potential catalyst for dropping in the Draft.

## Production Metric:

Productivity is a supplemental piece to my scoring models. In order to score a player in productivity, positional specific categories are collected in a per game average, as well as collecting each prospect's production against the three best teams on his respective schedule from each of the past two seasons. (Not applicable to offensive linemen)

## Film Assessment:

The film is the essential piece to each and every evaluation. Each position is scored in 10 position specific traits. These traits are listed in order from most to least important. A player's film score will generally set their tier as to what caliber player they project as moving forward; while the supplemental analytics provide fine details to separate players In the same film tier.

## Round Value:

There is a definitive difference between a round grade and a round value.

Round values are meant to reflect where in the Draft a player is a strong value pick. Teams picking 8-10 in the first round will struggle to find value for a Top 10 selection; for example.

## Quarterback Specific Evaluated Traits

| Arm Accuracy: How well does the Quarterback place the football? Does he set <br> receivers up for run after the catch? Can he accurately deliver on all 3 levels of <br> the field? | Arm Strength: Can the Quarterback deliver short, intermediate and deep throws <br> with strong timing and trajectory? Can he fit throws into tight windows with high <br> velocity? |
| :--- | :--- |
| Decision Making: Does the Quarterback make correct decisions before and after <br> the snap? Can he process coverage and correctly identify open receivers to <br> target? | Pocket Awareness: Can the Quarterback feel pass rushers while maintaining <br> eyes down the field? Can he manipulate pocket to extend plays and can he avoid <br> sacks in pocket? |
| Progressions: How well does the Quarterback progress from his primary targets <br> into secondary ones? Can he utilize the full field of play to identify a target and <br> throw? | Mechanics: Does the Quarterback display a short, quick delivery? Does he <br> properly stride into throws, transfer his weight? Does he face target and follow <br> through correctly? |
| Anticipation: Does the Quarterback throw receivers open and enter into <br> delivery before the receiver has completed his break? How quickly does he <br> process throws in his drop? | Footwork: How well does the Quarterback get back onto his throwing platform? <br> Does he throw from a proper throwing base? How quick is his foot speed? |
| Poise: How well does the Quarterback handle pressure? Can he deliver throws <br> under duress and can he rise to the occasion in key down/distance and game <br> scenarios? | Run Ability: Does the Quarterback give the extra element of being a threat as a <br> ball carrier? Can he extend plays with his legs? What kind of athlete is he? |

## FILM ASSESSMENT

Games: USC (2015), Texas A\&M (2016), Stanford (2016), Texas A\&M (2017), Memphis (2017), Colorado (2017), Oregon (2017), Washington (2017)

Arm Accuracy: Placement issues only arise when throwing Arm Strength: Has needed arm strength to both push the around pressure or forcing a ball under duress that should be eaten. Has terrific placement skills to all levels. Capable of throwing into holes in zone or threading vs. tight man coverage. Will lead receivers away from coverage.

Decision Making: Guilty at times of trying to do too much. When operating in a rhythm can be unstoppable as a drop back passer. Capable of dissecting defenses from the pocket, even against strong efforts in coverage. Situational awareness to know when to take risks.

Progressions: Full mastery of offense, from pre-snap to no huddle situations to working through field of play. Has frequently gone after middle of the field vs. split safeties, attacked deep side pockets vs. Cover 2 and isolated single defenders for hi-lo concepts. Advanced between the ears.

Anticipation: Will beat man coverage by throwing prior to receivers working out of breaks. Has good feel for when and where to put a ball to beat a breaking defender in zone or fit a tight throw around the bodies of several defenders and squeeze it in.

Poise: Relentless, killer mentality. Will make a poor throw or have target drop ball and come right back and attack again. Loves to work between the hashes and also in the intermediate areas of the field. Has made some clutch throws (but also some silly ones). Gunslinger approach.
ball with confidence down the field and drive throws into tight coverage and challenge defenders. Ball explodes off of hand and will carry pace through target with consistency. Top shelf arm strength.

Pocket Awareness: Does well to extend plays. Would much rather stay within the confines of the pocket but isn't afraid to climb the ladder to side step a rusher late to extend before looking to flip ball out to a receiver. Stands tall and tough in face of pressure when routes uncover.

Mechanics: Throwing mechanics are clean from a standing platform in the pocket. High release point and holds ball high on drop backs to protect from rushers. Can get complacent when rushing a throw and cost some accuracy but is typically very textbook in delivery.

Footwork: Drops are clean, light on feet and do well to collect off of back foot and drive into delivery. Does well to move feet in the pocket and get front foot striding to target. Has awareness to move around rushers before re-establishing base from ground up when pressured.

Run Ability: Is not a true threat with feet but has just enough athleticism to slip past a blitz and pick up key first downs with intermediate yardage for the line to gain. Mobility is more based on control in the pocket and moving laterally. Will throw with accuracy on the move.

## FILM ASSESSMENT

Games watched: Florida State (2016), Clemson (2016), Kentucky (2016), North Carolina (2017), Clemson (2017), Virginia (2017), Mississippi State (2017)

Arm Accuracy: Has issues with consistency on out breaking routes, will miss high and wide when throwing late. Needs to continue to hone accuracy on 20+ yard throws outside the numbers. Can thread the needle to any area between the hashes.

Decision Making: Can allow pressure to fluster and make some poor decision with the football. When unbothered or throwing from on the move is clean with targets, much more effective in dishing out to open receivers. Was more receptive to check downs in 2017

Progressions: Has been making more developed reads than given credit for. Offers experience with a lot of isolated reads courtesy of layered routes in hi/lo scenarios. Showed more rhythm as a passer in 2017 to work through progressions and throw at the top of the drop.

Anticipation: Can be late attempting some throws after break but has strength to mask those targets. Like many other areas, showed more confidence in pulling trigger on spot throws and timing oriented routes.

Poise: Throwing on the move and coming up clutch while protected are huge. Has made huge plays as a runner as well. Can struggle when boxed into the pocket to make sound decisions, can be quick to disperse the football prematurely and into danger.

Arm Strength: Has an absolute cannon for an arm.
Effortless in pushing the ball with pace down the field, capable of flicking the wrist and floating the ball deep down field with very little effort. Will beat tight windows and man coverage with power and zip on the ball.

Pocket Awareness: Can be magical in efforts to slip pass rushers. Seemingly has eyes in the back of his head to escape rushers closing from behind. Has ability to reset platform after juking and escaping an initial rush. Effective in slipping contact late.

Mechanics: Has made notable improvements in two seasons but still has some lapses thanks to casual throwing style. Will fail to work the hips through some throws, which forces the ball to sail and not be driven through to desired target with consistency.

Footwork: Needs to continue dedicating time to focus on consistent weight transfer .Ground up mechanics are one of core roots of lapses in throwing consistency. Has terrific ability to reset the feet out of a run to come to balance and throw off an established platform.

Run Ability: Is a magician with the ball in the open field. Explosive burst to blow past second level defenders and pick up large gains. Notable weapon with the ball as a runner, adds a whole new element to the running game. Knows how to diminish heavy hits and get down early.

## FILM ASSESSMENT

Games watched: Penn State (2016), Arizona State (2017), Notre Dame (2017), Washington State (2017), Stanford (2017), UCLA (2017), Ohio State (2017)

Arm Accuracy: Frustrating lapses of accuracy, stemming largely from undisciplined feet while working from the pocket. When standing tall is capable of making nearly any throw on the field, shows terrific down field accuracy and pinpoint strikes on timing patterns on the sideline.

Decision Making: Still learning to not take post-snap reads for granted. Can play loose with the ball and willing to take risks into tight man coverage. Has gotten stung trying to hit holes in zone while not accounting for defender reading eyes. Needs more consistency but will get hot, tear up D.

Progressions: Very effective at identifying rolling coverage before the snap and setting eyes away from the safety. Quick to jump on isolated routes. Works across the full field of play and is willing to use higher numbered progressions. Not always willing to settle for the check down.

Anticipation: Shows high aptitude at knowing what spot receivers are supposed to be at and throwing with accuracy as needed. Can be said for plays from the pocket and plays when moving and needing a receiver to extend the play. Accurate on come backs and slants against zone.

Poise: Calm and cool under pressure. Impressive maturity in key game situations, such as 3rd down and red zone passing. Has a good track record when working on the move and flushed off of spot. Directed several key come from behind victories throughout career.

Arm Strength: Arm strength is good but not great. Needs every bit of juice to help protect against prolonged delivery pattern. Can zip throws through the MOF in between tight zone spaces effectively to sneak in throws., Has needed power to throw deep.

Pocket Awareness: Seems almost oversensitive to rushers in the pocket. Is terrific to find gaps to slip out and throw from on the move. Will bounce around throughout the pocket, always light on feet and ready to slip rushers. Moves almost like a boxer within the confines of the pocket.

Mechanics: Delivery is long. Has pronounced hook through delivery and a long release time. Mental anticipation helps mask issue, though can get caught telegraphing thanks to release movement. Throws well on the move, squares the shoulders and uses frame to push through a throw.

Footwork: Feet are light but will make some throws harder on self by jumping around in the pocket and not fully setting the feet before making throws quickly. Needs to calm down feet and get more consistent stride into throws to protect from sub-optimal power on the throw.

Run Ability: Has underrated athleticism and ability to slip out of the clutches of defenders in the pocket. Has underrated open field speed but true value comes from working outside of the pocket and throwing while on the move.

## FILM ASSESSMENT

Games watched: Virginia (2016), Villanova (2017), William \& Mary (2017), James Madison (2017)

Arm Accuracy: Is much more consistent in the shorter areas of the field, where lack of arm strength does not hinger ability to place the ball. Has issues on far sideline throws, ball will sail and get away from him vertically. Misses a number of deep shots down the field.

Decision Making: Is sharp reading the field of play. Not often pressured into regrettable decisions, will pick apart teams without a pass rush to move off of set. Crisp in pass drop to make a decision and act with confidence at the top of drop.

Progressions: Experienced in an NFL style passing offense out of Richmond. Has receivers available and challenging all levels and areas of the field, has proven to be comfortable moving eyes and having to pick through defenders to find open receivers.

Anticipation: Is an effective spot thrower to beat zone coverages. Capable of threading the needle inside of 10 yards to zip throws as needed. Has ability to pull trigger on throws vs. tight man as well, will ID opportunities for back shoulder or $50 / 50$ placements.

Poise: Comfortable and confident when tasked with throwing on the move. Will stand in tough and address the rush before slipping off to the side to extend a play. Has made big throws down inside the red area after being forced off of platform.

Arm Strength: Ball takes notable time to arrive to destination when having to push. Shows enough juice to put the ball down the field but doing so with intent and accuracy are problematic. Will have throws jumped along the sideline without greater power.

Pocket Awareness: Shows some nice qualities to slide in the pocket late and avoid would be rushers. Has good lateral quickness in the pocket and has the ability to snap the feet back into position before looking to throw.

Mechanics: Snap out of release point is very quick. Ball shoots straight up before coming out of the hand, which allows for longer holds of the football before pulling the trigger. Would like to see a bit more downward push to finish release and help stay on top of the ball.

Footwork: Is light on feet and does well to stay collected. Will quickly get depth out of receiving the snap and hitch as needed into throws up the middle. Has good split in base to stay balanced and under control through release point.

Run Ability: Has modest mobility to pick up yardage after flushing the pocket and being tasked with running. Has ability to operate some zone read plays but should only be sprinkled in sparingly to responsibilities. Not a great open field athlete.

## FILM ASSESSMENT

Games watched: Morgan State (2016), Pittsburgh (2016), North Carolina State (2017), Cincinnati (2017), Florida Atlantic (2017)

Arm Accuracy: Needs to stay focused on keeping the football down, will miss throws high in the middle of the field. Has some flashes of awesome ball placement, especially when throwing on the move and utilizing natural arm ability. Can hit all levels of the field.

Decision Making: Takes calculated risks with the football. Often willing to throw into tight man coverage and challenge defenders into NFL windows with back shoulder throws and throwing away from defensive leverage. Crisp with initial reads if available after the snap.

Progressions: Has comfort to shift the eyes, will work across the field and has the willingness to work back to early reads with no one open. Has a good grasp on desired targets based on Safety rotation and coverage alignment, knows how to use eyes to create a window.

Anticipation: Has an NFL mindset. Pulls the trigger early with ability to throw to a spot and allow receivers to run into the location of the throw. Can beat tight coverage or zone windows with ability to see angles effectively while receivers are pressing through route stems.

Poise: Mentally tough. Stands tall in the pocket, surveying field of play fearlessly and has ability to take a big hit to hold for an uncovering receiver. Has made ample number of clutch throws on 3rd/4th downs to convert and keep possessions on schedule.

Arm Strength: Has ability to generate a lot of push on the football when trying to squeeze a throw into tight space. Will lose some velocity and have errant results on distance when forced to backpedal away from the LOS to avoid pressures.

Pocket Awareness: Has run into a number of sacks working from the pocket, is late to turn back after initially flushing for room to work and will step into pathway of rusher. Initial feel on throwing platform is good to step forward or laterally to avoid initial penetration.

Mechanics: Does well with delivery to not throw with a pronounced hook in motion, although platform and usage of the hips to throw the football are erratic. Inconsistencies with throwing posture and release are root causes of irregular accuracy.

Footwork: Would like to see more focus on stepping into throws and torqueing through the hips to bring trail leg through, would prevent tightness in the torso and allow a clean follow through to stay on top of the football. Balanced on throwing platform at the top of pass drops.

Run Ability: Has a fair amount of mobility to extend plays within the pocket and get away from a rusher. Doesn't have a lot of juice and won't churn out a lot of yardage against zero coverage to slip past pressure calls.

## FILM ASSESSMENT

Games watched: Colorado (2016), West Virginia (2017), Texas Christian (2017), Tulsa (2017), Oklahoma (2017), Virginia Tech (2017), Pittsburgh (2017)

Arm Accuracy: Has lapses of ball placement when trying to throw tight coverage along the sidelines. Has poor habit of missing high in the middle of the field. Nice touch and ability to loft passes between zone defenders with consistency.

Decision Making: Typically effective in taking what the defense is willing to concede. Eats up off coverage in the quick game. Shows a good handle for adjustments at the line of scrimmage to put team into correct play. Usually safe with passes to all three levels, has to see opening.

Progressions: Poor habit of locking into a read from the pre-snap. Knows what an ideal defensive alignment is and will get stuck on the primary if fed desired look. Has flashes of quick, confident reads to work eyes across the field of play.

Anticipation: Has a clean sense of releasing the football prior to receivers working out of the break. Placement consistency is still a work in progress but has shown promising comfort in pulling the trigger early.

Poise: Poor decisions and ball security are most prevalent when staring down the barrel of a blitz. Will hurry to get the throw out but does so at the expense of fully reading trap coverages and dropping 2nd level defenders in zone. Will sit and wait on hot read, even if not immediately available.

Arm Strength: Distance is adequate, but velocity on tight window throws dies when feet and base is not set as needed. Does not show arm torque to muscle throws out with heat under pressure. Defensive backs can get a jump on far sideline throws.

Pocket Awareness: Feels ghosts in the pocket. Has good ability to stand in firm and shrug off contact before pulling out of the grasp. Struggles with peripheral vision allowing a back door exit out the pocket, becomes frantic and eager to disperse the ball instead.

Mechanics: Functional athleticism can be a limitation once forced off of initial platform. Upper half gets handcuffed when momentum influences throw. Carries the ball securely but rotation through throws can let some MOF targets sail high, won't rotate down through the throw.

Footwork: Feet are a bit heavy getting out of snap and do not do well when tasked with snapping back into a different direction after initially setting feet. Will leave the feet open and cause the hips to get locked when trying to throw late to a deeper progression.

Run Ability: Is not a threat to break the pocket and gash defenders down the field if forced to leave the pocket. Would rather hold and allow a receive to work open, but is quick to get caught from behind and sucked down by secondary pursuit from pass rushers.

## FILM ASSESSMENT

Games watched: Miami (2017), Louisville (2017), Boise State (2017), Connecticut (2017)

Arm Accuracy: Has some inconsistencies with placement, stemming largely from a dynamic base that isn't always set properly when starting to throw. Has good touch and ability to drop ball over top of zone defenders. When feet are correct has very strong natural placement skill.

Decision Making: Will allow pressure to force some throws out that need to be eaten. Is a rhythm passer, is at best when back foot hits the ground and read is open as compared to standing and surveying the pocket. Makes good decisions on roll outs to use athleticism to advantage.

Progressions: Comfortable and confident working through the field of play. Does very well to pair drops with timing of routes and often stays on schedule with eyes to ensure release is in sync with the route.

Anticipation: Ability to see play developing in live speed is likable, has a sense for working on the move and letting receivers work open with eyes down field before throwing with touch. Hits some very nice window throws against zone coverage; throwing away from defensive leverage.

Poise: Tough as hell. Willing to stand in strong in the pocket before delivering the ball in key situations while taking a big hit. Has come up with some clutch throws in big moments as well. Needs to be more willing to eat the ball and take a sack, however.

Arm Strength: Has the needed baseline arm strength to challenge to all three levels of the field. Sneaky arm strength to get behind deep defenders. Gets nice push on the ball in the shorter areas to zip throws on time and beat tight coverage.

Pocket Awareness: Has a good feel for where rushers are and understands when feet need to move out of the way of a potential sack. Is light on feet and does well to slide and sidestep potential pressures while still sustaining eyes down the field.

Mechanics: Can be a bit loose with the ball at times, would like to see a greater sense of ball security in the pocket. Does well with release to snap ball upwards, crisply before pushing out of hand. Is well aligned through the upper half to optimize shoulder rotation through throws for power.

Footwork: Feet initially are great, does well to pivot and spring out of drop or slide feet and avoid a rusher. But once forced off of spot will allow feet to square into the LOS and times and needs to be aware of need to snap back into a throwing base.

Run Ability: Sneaky athleticism outside of the pocket. Is comfortable on the move to avoid rushers and has enough fluidity to slip out the back door of the pocket and make a blitz or man to man coverage down the field pay for a lack of contain.

## FILM ASSESSMENT

Games watched: Boise State (2017), New Mexico (2017), Texas State (2017), Colorado State (2017), Utah State (2017), Iowa (2017), Oregon (2017)

Arm Accuracy: Struggles with placement when pushing the ball on vertical throws. Does not show a great deal of consistency with trajectory to adequately reach targets pending coverage. Misses some elementary throws, threads some impossible needles. Very streaky.

Decision Making: Wires crossed too easily. Will fail to identify blitzes and won't replace defender with ball. Throws into coverage. Doesn't adjust placement in response to active defenders in area. Will struggle with more advanced routes, played with a lot of 2-3 man route combos.

Progressions: A lot of one read or half field reads present on film. Was not exposed to a high level of full field reads on successful plays. Throws with most confidence against low number of rushers and zone coverage.

Anticipation: Will deliver late due to habit of preferring to see receivers coming out of breaks before pulling the trigger. Doesn't feel tight windows well and will misfire a lot of throws needlessly. Point and shoot style passer as compared to timing/rhythm based passer.

Poise: Will get rattled under pressure. Needs to take the extra moment to collect from the pocket.
Toughness is undeniable in showing ability to absorb hits. Has not had constant success as a key situational player.

Arm Strength: Natural strength and ability to generate velocity on the ball is tremendous. True blue chip trait. Effortlessly can flip the ball $50+$ yards down field without having feet set or striding to the target. Will hammer in tight window throws as needed in tight coverage.

Pocket Awareness: Patient standing in tall until after first few big hits in the pocket, then will get anxious and rush delivery and mechanics. Does well to adjust platform late and vacate area after defenders have closed in to avoid sacks and extend plays.

Mechanics: Throwing delivery is fairly compact. Release point is high to avoid contested throws at the line of scrimmage. Does well one the move to posture upper body in way to generate needed rotation on throws and allow ball to reach target.

Footwork: Does well out of the gun and when working under center to get depth in drops, collect balance and get into a throwing posture. Often times will neglect feet when shifting off of initial read and fails to step to target when working through the field.

Run Ability: Very impressive mobility. Has been utilized successfully in QB run game via QB power and zone read. Size in the pocket is a handful for would be tacklers in the pocket. Capable of breaking contain and getting outside the pocket.

## FILM ASSESSMENT

Arm Accuracy: Makes receivers work extra to finish receptions, does not show reliable ability to put throws on the numbers. Has nice touch on vertical throws down the field but will consistently struggle trying to squeeze balls into tight windows.

Decision Making: Has been tasked with running a very simple passing offense at South Florida. Not required to make a lot of multiple reads. As a result, is consistent with quality protection of the football and will not actively put the ball in harm's way.

Progressions: More of a point and shoot style passer. Prefers to target isolation routes as compared to allowing route patterns develop to the heavy volume side of the field. Has not been asked to make NFL caliber layered reads at USF.

Anticipation: Anticipation is centered around knowing where the read is pre-snap. Does not throw the ball to a spot, is a point and shoot passer who needs to see receiver uncovered or out of break before gearing up for a big shot into the teeth of the defense.

Poise: Wants the ball, but too often will aggressively pull the ball down and use legs to try and tackle key downs as compared to letting routes uncover. Impressive toughness in taking big shots and continuing to play with control of responsibilities.

## Games watched: Florida State (2016), South Carolina (2016), San Jose State (2017), Temple (2017), Central Florida (2017)

Arm Strength: Has ample arm strength and no problem pushing the ball with pace or down the field vertically. Has good pop with the ball off his hands to diminish reaction time for defensive backs.

Pocket Awareness: Can be quick to flush the pocket. At times will trust legs over arm and identify a running lane against man coverage and bail on the pocket. Has good peripheral vision but fails to keep eyes up and down the field once pressured.

Mechanics: Will allow athleticism and quickness in the pocket to deteriorate mechanics and can be quick to pull the trigger after having let initial spot. Shows good balance and starting posture on drop back passes and does well to rotate through release for torque.

Footwork: Feet are light and transition out of mesh point well. Has a springy hitch step to collect and work into throws when having to climb forward. Needs to continue to develop more intent of aligning feet after flushing off of platform to improve accuracy.

Run Ability: Terrific runner. Great vision, balance and a decent level of burst to accelerate and break the first level. Has a sizable workload as a rusher and has not had any durability issues to date.

## FILM ASSESSMENT

Games watched: Washington (2016), Washington State (2016), UNLV (2017), Troy (2017), Missouri (2017)

Arm Accuracy: Has poor habits as a passer, will lose accuracy when trying to push the ball with pace, most notably when forced off of spot as a passer on the move. Will surprise with a strong throw into intermediates with pressure in face.

Decision Making: Makes some frustrating decision with the football when handling pressure Has a very methodical approach to handling quick game, will pick defenses apart if able to dissect at top of drops and pull the trigger on comeback routes and slants.

Progressions: Quickly works through reads on pass drops. Often times makes a quick decision to primary read if open and is quick to disperse the football in such instances. Struggles more with longer developing progressions to confidently work through the field.

Anticipation: Has a nice sense of timing when tasked with throwing within 10 yards of the LOS, will zip in a pass to a moving receiver in stride and shows ability to spot throw with visible passing windows. Does not, however, anticipate squatting defenders in zone to break on crossing routes.

Poise: Plays too risky with the football on anything outside of quick game. Needs to speed up the processor and slow down the feet, plays a bit panicked after taking first big hit from the pocket. Does not handle pressure well to navigate the pocket and extend a play.

Arm Strength: Does not have a desirable level of zip on passes to thread the needle into tight spaces reliably and without DBs having a chance to drive on the throw. Struggles to push the ball deep down the field with effectiveness.

Pocket Awareness: Takes far too many sacks. Has to increase speed of the internal clock to prevent defenders from pushing in the pocket and pinning in on platform. Has poor peripheral vision with eyes down the field to see and slide away from potential rushers coming in off the edge.

Mechanics: Has a perplexing habit to fall off the pitcher's mound on throws when forced to try to reset the feet. Will fade away from throws but still manages to place with accuracy in spurts, will lose any and all juice on the throw, however.

Footwork: Shows balanced drops and initial collection off of back foot but when needing to move will not reset the feet and as a result variance as a passer goes through the roof. Is not especially fleet of foot and will eat a lot of sacks due to inability to slide in the pocket.

Run Ability: Modest ability to flush a gap up the middle and pick up some cheap yardage against a blitz. Is not athletic with the ball in hands and is not going to make any defenders miss in the open field.

## FILM ASSESSMENT

Games watched: Washington (2016), Colorado (2016), California (2017), Southern California (2017), Stanford (2017), Arizona (2017)
Arm Accuracy: Can work effectively in the middle of the field but lacks the arm strength to drive throws with authority down the field. As a result far throws outside the number will die before reaching target. Will put throws behind receivers when trying to throw to moving targets.

Decision Making: Comes from a watered down offense that relies heavily on screens, short crossing patterns and spacing the field. Not asked to make a high frequency of layered field reads or throw into heavy traffic. Questionable decision making under duress.

Progressions: Willing to move eyes off of initial read but doesn't have a lot of hi-lo or layered reads and is content to take check downs and shallow crossers consistently. Has shown ability to process route combinations working middle of the field.

Anticipation: Often a point and shoot passer. Will hold ball and wait for read to uncover before working down to the check down/crossing pattern late and dumping off. Often times will allow zones to suck back up and challenge check downs. Shows good timing attacking between split safeties.

Poise: Gets rattled under pressure. Has ability to stand in and take a hit but after several bumps will start to see ghosts in the pocket and allow base and mechanics to break down without pressure.

Arm Strength: Lacking in ability to push the ball down the field. Vertical routes have high, arcing trajectory and hang for notable amount of time. Will have defensive backs jump come back patterns due to time from ball leaving hand to reaching target.

Pocket Awareness: Will take sacks by not moving platform as rushers collapse pocket around platform. Is not a player who can reset feet and move to extend plays: a traditional pocket passer. Would like to see more lateral movement instead of fading away from the LOS when pressured.

Mechanics: When getting a clean pocket will throw with a good release point and minimal hook in delivery. Does well to set and square to target. Will lose some economy of movement when winding up to throw further down field, fails to use legs and will muscle up top.

Footwork: Has a horrible habit of fading and sliding away from the LOS, needs to set the feet and stand firm under pressure with greater consistency. Step and stride are clean when delivering on time or without interior pressure to influence base.

Run Ability: Should not be considered a viable threat with legs. Does not have the speed, foot quickness or feel for pressure to slip the pocket and be considered a danger to make defenses pay playing man to man against offense. Passing threat only.

## FILM ASSESSMENT

Games watched: Pennsylvania State (2017), Oregon (2017), Ohio State (2017), Wisconsin (2017)

Arm Accuracy: Struggles greatly to throw the football away from defenders in man to man situations. Often overthrows vertical targets and will miss high over the middle of the field. Will struggle in all three levels with consistency to allow for easy receptions.

Decision Making: Does not read the field of play well, often misdiagnosing zone coverage and will throw into squatting defenders. Fails to see a buzzing defender working across the field when throwing into the MOF. Has been a high risk passer with many turnovers.

Progressions: Has worked in an offense that utilizes NFL route combinations. Processor can be slow and will telegraph throws in instances by locking onto and staring down an initial read. When comfortable to work off primary has nice results finding secondary targets.

Anticipation: Capable of throwing with timing, can zip throws into windows on slants, comeback patterns and in breaking patterns. Issue comes with accuracy, is willing to pull trigger early but doesn't have consistent success as a spot thrower to hit receivers accurately.

Poise: Does not handle pressure well. Will fail to stay collected and breaks down within the pocket. Will rush throws and does not illustrate control of game situations as a passer. Often spoon fed easy throws and screens in must throw situations.

Arm Strength: Has the power to push the ball with impressive velocity down the field. Capable of slinging throws $50+$ yards with pace. Willing to take tight window throws and can sneak a throw into tight spaces. Ball will get to target in a hurry.

Pocket Awareness: Willing to stand tall and survey the field but ability to extend plays with legs is limited. Does not have a natural feel for collapsing areas and will often look to pull the ball down late in an effort to protect from potential turnovers.

Mechanics: Will allow throwing base and alignments to break down with a longer time spent in the pocket. Has a minimal hook in delivery movement but ball doesn't always come out quickly, which puts ball security at a premium when starting to throw.

Footwork: Feet are collected and does well to stand tall in the pocket. Would like to see a greater awareness of striding through throws but does well to get traction towards target when uncontested. Gives ground under pressure and will throw off of back foot.

Run Ability: Has modest athletic ability, can win a foot race against defensive linemen if forced to get off of spot and leave the pocket. Doesn't look to leave confines of platform and extend plays with any amount of regularity.

## FILM ASSESSMENT

Games watched: Alabama (2016), Louisiana Tech (2016), Florida Atlantic (2017), Middle Tennessee State (2017), Georgia State (2017)

Arm Accuracy: High variance as a passer, be it off of a firm throwing platform or when forced off his spot. Lower body mechanics deaden in stretches and limit accuracy. Has arm ability to muscle some throws out and flashes with those hits natural placement.

Decision Making: Makes some pretty inexcusable decisions with the football, particularly on deeper passing and not able to lean on initial reads and quick game. Takes a high number of sacks as well, needs to be more aware of throwing the ball away.

Progressions: High volume passer, but gross majority of passes are quick game into the boundary: identifying one on ones and hitting quick passes in the flat or slant areas of the field. Is not quick to move off of initial read but will drop eyes if flushed.

Anticipation: Often has a visual mindset and must see an uncovered receiver to pull the trigger. Timing is good on the routes breaking back to the LOS on the boundary but MOF throws are a different story, approaches with a lot of leeriness and hesitation unless receiver has uncovered.

Poise: Gets flustered by pressure. Doesn't make sound decisions and will force the ball out, putting ball security at risk when forced to act quickly on feet. At times is willing to stand in vs. pressure, others will fade off the mound to avoid a hit and ball will sail.

Arm Strength: Has a very strong arm, is capable of driving throws to any area of the field as needed. Has nice trajectory in the intermediate areas to keep ball flat and keep pace running hot through the receiver to ensure ball doesn't die off near the target.

Pocket Awareness: Consistently miffed by ghost pressure. Will drift off of platform in the pocket and into the pathway of an upfield rusher. Has failed to ID a collapsing pocket and gotten knocked at the release point a few too many times as well.

Mechanics: Arm slot is often wild and all over the place. Too frequently will freeze up with flashing pressure and arm out a throw, needs to be a better Quarterback and less of a thrower. There's glimpses of good torso rotation and high release, but it's very intermittent.

Footwork: Footwork is a mess. Too often locks in the feet and stands flat footed on throws without stepping or striding to target. Pressure up the middle seems to be a catalyst for feet freezing. Has to be reworked from the ground up to present improvements.

Run Ability: Doesn't offer much as a runner. If anything erratic movement from the pocket nets more negative plays than mobility or ability to flush the pocket saves. Doesn't throw well from on the move, loses a good deal of accuracy trying to line up throws on move.

## FILM ASSESSMENT

Games watched: Ohio State (2016), Wisconsin (2016), USC (2016), Akron (2017), Pittsburgh (2017), Iowa (2017), Michigan (2017), Ohio State (2017)

Vision: Anticipation for developing holes when pressing into the line of scrimmage is very strong. Has good patience as well to understand when to slow play charge into the second level. Has good spatial awareness for lateral pursuit closing from the backside or the field.

Feet/COD: Has very active and powerful feet to drive off of foot and explode for high distance lateral cuts. Can completely vacate a gap when deciding to re-direct and go east/west. Does well to sustain speed if able to keep pads square for cuts and work upfield after cut.

Durability: Complete back who has handled any and every role. Three down player who consistently gets better throughout games, wearing out defensive players challenging one on one in the alley. Has not suffered any injuries of note over course of college career, clean bill of health.

Balance: Ability to stay upright and balanced through cuts is tremendous. Has rare ability to cover ground with cuts and immediately transition up field. Able to sustain contact both in the air and down low and still keep feet moving forward and recover for more yards.

Pass Protection: Frame and functional power should enable a seamless transition to the NFL level. Has good presence to step forward and be aggressive when challenging defenders as compared to catching bodies and conceding ground.

Elusiveness: Very rarely brought down on first contact unless able to be contacted at the mesh point. Blend of size, lateral agility, power, explosiveness and long speed is a once in a lifetime package. Has good creativity to start/stop and shake would be tacklers in one on one situations.

Receiving Ability: Very active as a receiver and became the focal point of offense in 2017. Consistently shows soft hands and does very well to see ball into hands, limiting drops to just a handful over the course of career. Active both in check down area and pressing vertically in the middle of the field.

Short Yardage Skill: Powerful in short spaces and explosive lower body power is supplemented by a shorter frame to run with leverage. Does well to drop the pads, run the feet and fall forward when needing an additional yard to convert for a fresh set of downs.

Football Intelligence: Natural field vision is rare, as is ability to create yardage when offered little initially at the line. Has natural feel for defensive flow and is quick to react to tacklers and counter with a move to force a missed tackle.

Effort: Is wise and selective in when to take contact and work for extra space as compared to getting down or out of bounds. Self preservation never comes at the extent of trying to maximize yardage and get the most out of every touch of the football.

## FILM ASSESSMENT

Games watched: UNC (2016), Florida (2016), App State (2017), Vanderbilt (2017), Notre Dame (2017), Florida (2017), Miss State (2017), Auburn (2017)

Vision: Excellent ability to anticipate alleys developing on the second level. Shows patience when pressing the line of scrimmage to allow for blocks to develop before stringing together cuts to force a missed step at the point of attack. Consistently pops out the back end of runs.

Feet/COD: Feet are smooth and cuts hard at full speed with confidence. Effective cuts both in the hole and behind the line of scrimmage to quickly get into a crease as available.
Impressive mobility and short area COD based on back of this stature.

Durability: Grinding running style, will wear down tacklers throughout the game and finish strong with powerful leg drive and intent to fall forward at the end of runs. Incredible durability to not miss time in 2016 after knee injury cut short end of 2015 season.

Balance: Has impressive ability to always stay upright on hips. Can cut laterally, jump cut, stop/start, or absorb contact and is never caught unprepared to take a hit and continue forward push. Must be caught down low to cut down in the open field; otherwise defenders will slide right off.

Pass Protection: Physical frame and notable intent to deliver a jarring hit do well to keep passer clean. Needs to be more consistent to stick in after first contact and not let more physical defenders create space and work forward into Quarterback.

Elusiveness: Has rebounded from ugly injury in 2015 to show dynamic lateral cuts and great strength/balance combination to overwhelm tacklers on the second level. Has good wiggle and a second gear to shake tacklers in one on one situations in the alley.

Receiving Ability: Has not had an active role as a receiver after catching nearly 20 balls as a freshman. Usage is more about rotation of teammates and game situation as compared to an inability to catch the football. Runs a lot of flat and check down reps when in as receiver.

Short Yardage Skill: Does well to get pads square and run legs when needing a yard. Powerful lower half poses challenge for tacklers trying to wrap around the waist or thighs; can produce overwhelming forward momentum if given opportunity to reach the LOS with a full head of steam.

Football Intelligence: Savvy runner that knows how to set up defenders in the open field. Is a headache on the second level with versatility of jukes, balance, size and awareness to head fake or contort body to create additional room to run while on the fly.

Effort: Grinder after first contact. Has relentless attitude to stick nose down and push through tacklers if needed. Will stay engaged in the game as a blocker, shows desirable intent to step up and challenge blitzers. Selective looking for big plays, will optimize sub-optimal runs.

## FILM ASSESSMENT

> Games watched: Texas A\&M (2016), Louisville (2016), Brigham Young (2017), Alabama (2017), Florida (2017), Arkansas (2017), Mississippi (2017)
> Vision: Has anticipation to brace for contact or adjust angles better than anyone in the class. Will anticipate and string together multiple cuts in succession to pick way through second level. Understands when opening is present to put the gas down and when to patiently slow play the line.
> Feet/COD: Steps are more dynamic and powerful than sudden. Feet are efficient but true value as a cutter comes from ability to plant and drive in wide or narrow spaces. Has good redirection as a one cut runner to turn up the field and get north south to hit a hole.
> Durability: Has done well to battle through some lingering leg issues throughout the 2017 season. Runs hard, capable of being a finisher late in games thanks to special balance and low pad level to punish second level tacklers. Three down player who could easily fill a workhorse role.
> Balance: Showcases terrific balance and ability to keep momentum moving forward while cutting and adjusting pathways to avoid defenders. Has a flexible base, is comfortable playing with feet away from underneath of hips to produce springy cuts.
> Pass Protection: Very strong lower body to shock free running blitzers from the second level. Has good habits of stepping up to challenge defenders as compared to being passing when tasked with a one on one assignment at the edge of the pocket.
> Elusiveness: Has very springy lateral cuts. Capable of vacating a space behind the line of scrimmage to uncover into a developing crease elsewhere. Does well to get skinny and lean through small gaps at the LOS. Will reduce surface area to absorb contact well.
> Receiving Ability: Has not been utilized as a receiver frequently. Majority of scouted targets have come from swing routes as a check down or designed quick passes. Capable of running quick routes in the short areas of the field if motioned out into an empty set.
> Short Yardage Skill: Effective on a number of levels. Foot drive in tight spaces is good to generate forward momentum. Has a good deal of leverage as a runner on account of pad level. Does well to pick spots and is apt and tucking a shoulder to step laterally if a crease develops.
> Football Intelligence: Has a natural feel for letting things develop as a lateral runner in the backfield. Patience is excellent. Spatial awareness and natural body control are strong to optimize every run and finish with momentum carrying forwards.
> Effort: Loves to challenge second level defenders one on one. Effective in keeping opponents on heels, will run over or around them. Stays engaged in the play, not seen loafing or pulling up short, will play through the whistle.

## FILM ASSESSMENT

Games watched: Auburn (2015), Georgia Tech (2016), Tennessee (2016), Auburn (2017), Florida (2017), Notre Dame (2017), Kentucky (2017)

Vision: Patience behind the line of scrimmage to press the line and allow a lane to develop. Effective squaring up the alley and breaking back across the grain. Does well to identify defensive flow on the second level and avoid collisions before able to break into space.

Feet/COD: Can at times overextend when pressing to the line of scrimmage to avoid ability to restart with quickness but has rapid steps to collect, redirect and spring into the open field. Effective steps out of stance to collect and gather momentum downhill on gap/power runs.

Durability: Has never been tasked with being a workhorse back, only eclipsed 200 carries once (2015). Rotation at RB has allowed for fresh legs late in games to help finish defenses, next level role may be best as the same. Has battled some dings in each season to limit participation.

Balance: Has high end ability to bounce off of contact and keep feet collected. Will high step or adjust feet to avoid garbage and keep momentum moving forward. Has a nice center of gravity when working through the POA and stay ready to cut to daylight.

Pass Protection: Has a good approach but hasn't shown consistent success stepping up to challenge defenders and seal gaps on either the inside or outside. Ideal role in pros would mirror that in college: early down back with some receiving reps.

Elusiveness: Very active with the free arm to challenge tacklers and stiff arm to avoid contact. Has great balance and ability to contort lower body to duck away from defenders at feet. Lateral quickness is good with foot activity to pivot away from a head on collision.

Receiving Ability: Has been given minimal opportunities as a receiver but reps have shots ability to run routes out of the backfield and have comfort extend for the football. Only logged 5 receptions over senior season.

Short Yardage Skill: Has good foot drive and ability to drop the pads low. Runs with more physicality than expected; built thick and capable of sticking nose up into gap with momentum to push the pile. Can react late and bounce with quick feet to avoid penetration.

Football Intelligence: Does well to identify when play has developed and opportunity to hit the hole hard downhill is present. Patient as a runner and has a natural ability to feel defenders in pursuit and adjust track as needed.

Effort: Has done well to run with physicality on each and every touch. Rarely fails to finish runs without falling forward, despite efforts to break contact in the backfield against penetration. Role has never been an issue, has always been prepared when thrust into larger role.

Games watched: Arizona (2017), Arizona State (2017), UCLA (2017), Notre Dame (2017), Ohio State (2017)

Vision: Has nice patience and willing to allow plays to develop between the tackles. Has ability to wait out defensive flow before hitting a quick lateral cut at the LOS and slip through for a big gain. Terrific feel for stressing defense with lateral speed before cutting up into a gap.

Feet/COD: Feet pound the turf on hard cuts, not afraid to drive foot into the ground and catch momentum. Active foot drive through contact to play forward and sustain push. More effective pressuring outside and knowing when to bounce back towards the sideline and decrease defensive angles.

Durability: Has been a hammer in the run game, showed impressive progression throughout final two seasons into a primary back. Heavy hitter between the tackles with aggressive pads and violent intent to impose will on defenders. Adds on additional YAC later into football games.

Balance: Great ability to power through arm tackles. Will shrug off high contact and pull feet from the grasp of defenders to get back into space. Feet are quick to snap back to balance after jump cuts to pivot out of a cut and find forward momentum yet again.

Pass Protection: Is not good at standing firm. Fails to use hands to establish a punch on defenders and will give ground with frequency. Needs to be more tied to the ground to not give up a big push on the inside. Will stalk down incorrect gaps stepping up inside as well.

Elusiveness: Nice blend of burst, balance, strength and quickness in tight spaces. Will contort base on the move to pull out of tackle attempts and continue press up the field. Has good wiggle and power combo to put defenders on heels trying to square up in the open.

Receiving Ability: Is not an effective third down option on passing distances. Used most frequently for check downs and swing routes into the flat but rarely targeted. Fights the ball when coming hot to cleanly see into hands and cleanly put away before transitioning into RAC mode.

Short Yardage Skill: Is not a brute but blend of athletic profile, mentality as a runner and short area acceleration allow for some effective pile moving. Patience will allow for some late alleys but is capable of flipping the switch and putting pads down for needed yardage with quickness.

Football Intelligence: Savvy back to manipulate the LOS. Knows how and when to bounce in and peel off of a press up the field. Effective putting the pedal down to gain the corner with timed acceleration. Ability to create as a runner off of contact with creativity is unique.

Effort: Has a strong motor on carries and effort releasing out of stance regardless of the play call. Fast to flow and get out as a check down option. Runs hard and will sell out in an effort to reach the needed yardage for key conversions and regular runs all the same.

Average Score:

Games watched: Georgia (2017), Alabama (2017), Missouri (2017), Mississippi (2017), Central Florida (2017)

Vision: Peripheral vision and ability to identify late developing creases at the LOS is strong. Will hold water and allow defensive flow to dictate before driving into an alley way to press up the field. Will be effective on inside zone schemes thanks to vision.

Feet/COD: Feet are not especially sudden, but very deliberate and controlled. Enables good balance prior to first contact courtesy of sustained leg drive and does well to adjust feet while taking on contact as a way to stay upright.

Durability: Was used as a workhorse back throughout 2017 season, tallying an impressive 285 carries in 12 games. Did suffer some minor injuries throughout final few weeks, which will be something that warrants consideration depending on team need for true bell cow back.

Balance: Very clean. Has no issue at all with absorbing contact. Is not the most fluid or flexible of backs but plays to strengths and abilities of body to contort and avoid hits, while still able to reestablish footing and press up the field for more RAC.

Pass Protection: Requires significant improvement. Illustrates the same patience of running style but never flips switch to deliver a blow to defenders. Does not possess desired result as a cut blocker either, does not play through legs and will let defenders step over or press down with hands.

Elusiveness: Is not the most springy or fluid of backs, but carries momentum well when playing forward into the LOS. Has nice balance and shifts frame just enough to escape heavy body blows and continue progress up the field. Modest jump cut ability to vacate space late.

Receiving Ability: High usage throughout the 2017 season, shows nice ability to pluck the ball and has no issue extending hands away from body to see in targets. Most active as a delay screen receiver to fake blocking prior to slipping out into the flats and becoming available.

Short Yardage Skill: Good blend of leg drive, power, forward lean and patience, which keeps defenders on toes and unable to sell out for gaps at the snap. Balance and ability to spin off bodies and fall forward was need on a number of occasions for conversions, consistently able to convert.

Football Intelligence: Illustrates a sense of comfort with the speed of the game. Has ability to slow play runs between the tackles but also understands when opportunities are present to hit the hole hard. Despite offensive system, has had high exposure to heavy boxes to anticipate and ID holes.

Effort: Capable of three down contributions, although pass protection is a glaring hole. Runs hard, has converted through contact on short yardage situations in enviable fashion. Looks to maximize yardage and willing to take contact in order to do so.

## FILM ASSESSMENT

Games watched: Georgia (2017), Southern California (2017), Miami (2017), Louisiana State (2017),

Vision: Will try to adjust rush track late at times with mixed results. Had a number of big runs come against advantageous box numbers and thin POA. Does show nice peripheral vision to pick up on defensive flow on the second level.

Feet/COD: Natural quickness is not especially high end, handcuffed by length of legs to stay in constant movement. Has some nice jump cut results thanks to powerful legs. Will not redirect with quickness and be able to hit holes to burst through.

Durability: Grind it out style runner who is most successful running north south and putting the pads down. Wore out several teams down the stretch this season, breaking bigger games into the second half and providing the needed physical running style to dictate pace of play.

Balance: Has surprised on a number of occasions with ability to spin out of a tackle and continue to gain yardage. Does well out of cuts work in a drop step to collect and prevent being of balance when trying to work back up the field.

Pass Protection: Big, long, powerful with a strong lower body. Shows good engagement in stepping up, won't wait for defenders to throw frames into his lap. Has to work on keeping the hips low to optimize ability of absorbing without collision causing him to give ground.

Elusiveness: Big body has found success running down hill and contorting lower body around potential tacklers. Has nice ability to collect out of a lateral cut and stay balanced. Build up speed, has long strides that need space to open up and help break big plays.

Receiving Ability: Reliable check down option. Has had favorable results out in the flat being isolated against a smaller skill player to make first defender miss. Has desirable hands and an abnormally large catch radius for a back, hard to miss in the flats.

Short Yardage Skill: Has a notable ability to keep footing, fall forward and twist over the top of defenders to help gain extra yardage. Has done well to put the pads down and absorb any initial push. Can get stuffed up if defense successfully creates a pile between the A-gaps.

Football Intelligence: Will need to prove no issues reading the point of attack as a runner, often times afforded the luxury of a light box in breakout 2017 season. Situational awareness on money downs is good to understand where needed yardage can be gained.

Effort: Good teammate, was used as the lead blocker on QB draw work and jet motion, working down the field 10+ yards trying to create space for runner. Runs hard with consistency, isn't complacent with the football.

## FILM ASSESSMENT

Games watched: Florida State (2016), West Virginia (2016), Toledo (2017), Duke (2017), Florida State (2017)

Vision: Has good reactive quickness when squaring up tacklers one on one in the alley way. Anticipation for cut back against the grain and lost contain is very strong. Between the tackles vision allows for sliding into gaps but more effective seeking home runs to the boundary.

Feet/COD: Natural foot quickness is very strong, both when collecting at the mesh point and when working around contact in the open field. Ability to stick foot in the ground and explode up the field is excellent, has a lot of spring in step. Likable ability to re-balance posture off of a cut.

Durability: Size and durability is going to be a question. Has been given a sizable workload throughout career but isn't a grinding RB and missed opportunity this season to put durability questions to rest after ankle INJ forced missing final 9 games.

Balance: Wonderful ability to transition out of a dead sprint and juke before recollecting feet. Has taken light contact and been able to spin off and keep feet for notable YAC runs. Dynamic open field athlete with home run potential on account of balance and burst.

Pass Protection: Soft in challenging defenders, not on account of effort or disinterest but rather frame is lean and not especially thick in the lower half. Has had success as a cut blocker to chop down free runners coming off the edge or through interior gaps.

Elusiveness: Very slippery. Shows impressive burst and long speed, balance, ability to force a false step in tight spaces and wiggle. Must be effective in forcing a missed tackle in space, does not illustrate a good ability to absorb contact and continue pressing up field.

Receiving Ability: Very good receiver out of the backfield. Shows good polish to create space, either against off coverage LBs on the second level or feigning contact and slipping out past a contain defender in the screen game. Has very good hands and ability to receive the ball.

Short Yardage Skill: Is not a hammer or grinder between the tackles. Will not have great success sticking nose down and trying to push the pile to convert short yardage situations. Simply lacks the leg drive and power behind pads to have sustained success in this area.

Football Intelligence: Seems to have the most success working outside the tackles, vision is very good in said situations. Has polish as a receiver, should have ability to immediately assimilate to the NFL game and contribute on third downs as a change of pace back.

Effort: Runs routes at the same pace, shows no signs or tip offs of play design or when he is a primary look. Effort in supplementary areas of the game is strong. Will look to bend back runs and turn up field but usually not at the extent of leaving available yards on the field.

7.20 N/A
make a hard cut by pounding drive foot into the ground. As a result, suddenness and ability to break off on hard angles is somewhat tempered. Adjustments in path don't happen with
suddenness. suddenness.

Durability: Just a one year starter but is most certainly a "closer" with running style. Wears out defenders and takes advantage of sloppy tackle challenges to slip out of contact later in games. Runs with good pad level and does well to protect body from absorbing hits.

Balance: Effective when running north/south to shrug off tacklers up high and continue momentum up the field. Stubborn with lower body to pull and drag wrap up defenders if legs are still given space to drive. Plays within physical limitations to prevent overextending and losing balance.

Pass Protection: Sturdy build will provide ample room for improvement. Can get crossed up with positioning if stressed with a delay or multiple defenders when tasked with protecting outside gaps. Needs to provide more of a firm punch with hands.
Vision: Has moderate success both getting in behind linemen and allowing push at the point of attack to produce a hole and having to peel back against the grain. Can be late when initial hole isn't produced to find space, however and can be delayed getting back into a forward gear.

Feet/COD: Runs with feel collected under base, is not one to

Elusiveness: Feet are smooth but not especially springy. Does not have a good second gear and will get caught from behind with some regularity. Does not appear to have a trump card in the open field, other than power behind the pads to run through defenders.

Receiving Ability: Does well to see the ball into hands. Reps and targets have been limited but can be effective in the screen game thanks to value of a physical frame in pass protection on passing down and distances.

Short Yardage Skill: Can get stuffed up a bit too easily in one on one or with garbage around feet. When afforded a full run into the line of scrimmage will be able to generate momentum and establish a forward push. Pedestrian foot speed will prevent secondary push if forced to come to a halt.

Football Intelligence: Knack for big plays is impressive, has impacted the game as a runner and also on special teams as well. Multiple return touchdowns as a return man, although role at the NFL level would be as a secondary option, ideally.

Effort: Engaged in all areas. Does not show disinterest or laziness on pass plays. Would like to see finishes on chunk plays to not assume he won't be caught from behind, but a minor gripe. Has good play speed and urgency.

## FILM ASSESSMENT

Games watched: Pittsburgh (2016), Pennsylvania State (2017), Wisconsin (2017), Maryland (2017)

Vision: Will miss opportunities to hit a hole preemptively, runs most effectively when seeing defensive flow and lane develop when pressing into the line of scrimmage. Has better anticipation and decisiveness the further way from the A-gaps runs are called.

Feet/COD: Feet are not overly quick or explosive. Runs with feet tightly spaced, enabling constant adjustments on the move to pick way through potential tacklers. Does not have the burst or lateral ability to slide out of a gap and transition into a forward step.

Durability: Impressive stretch of high volume workloads over the course of the past four seasons. Runs with low pad level to diminish big body shots. Has good leg drive but build and play strength will not allow for an every down grinder role at the next level.

Balance: Has strong balance on account of running style and staying overtop of feet as a runner. Takes contact well and shows good body control in situations where contact impacts below the wait to collect body and work to continue push up the field.

Pass Protection: Lacks the power in the lower half to absorb contact from blitzers or rushers in the pocket. Regularly collapsed and pushed back into the lap of QB. Needs to add strength if going to become more well rounded and effective in supplementary 3rd down role as blocker.

Elusiveness: Shifty but not overly slippery. Has quick feet and ability to start/stop in tight spaces. Has ability to drop the shoulder and press through a crease to burst through contact. Has fair speed. Will run through soft contact and assertive mentality will break some tackle challenges.

Receiving Ability: Terrific receiving skills out of the backfield. Has been flexed into the slot and run routes over the middle of the field, been used in the screen game and been featured as a check down option in the shallows. Clean hands catcher.

Short Yardage Skill: Does not have a great level of oomph or push in the pile to create hard yardage. Will get small behind the line and duck up inside of a lineman in order to pick up needed yardage and move the sticks.

Football Intelligence: Will not have a lot of success on inside zone, will be somewhat handcuffed to running plays that suit ability to read the LOS. Terrific receiving back, very effective to find space to uncover and make himself available for his QB.

Effort: Runs hard, with the intent to maximize touches. Has awareness to optimize yardage first and does well to continue to twist and fall forward in tight spaces as a way to finish off the run. Terrific teammate and college player with tireless approach and mentality.

## FILM ASSESSMENT

Games watched: Washington State (2017), Washington (2017), Oregon (2017)

Vision: Has a fair level of vision between the tackles, illustrates a feel for lateral cuts once pressed up into the line of scrimmage. Willing and able to crash hard downhill on gap power runs if initial lane is provided from the mesh point.

Feet/COD: Feet are effective and smooth but not especially sudden. COD skills are not quick and does not jump out of alleys, rather sliding with jump cuts to bounce and gather momentum to turn into an adjacent hole. Does not have plant/ drive ability to work up the field and burst through lateral hole.

Durability: Heavy duty runner between the tackles, capable of grinding out yardage in rare occurrences where team is competitive late in games and trying to dictate pace or close the deal. Great leg drive, pad level and power for a bigger frame to lean on defenders and wear out would be tacklers.

Balance: Surprisingly well coordinated for such a big body. Build is stocky and thick, not overly top heavy or unable to gear down or slide laterally. Lack of burst and explosive cuts does allow for some of natural composure as a runner in the open field.

Pass Protection: Heavy duty build with natural strength to go toe to toe with all comers off the second level. Would be well served to be coached up on protections as an interior gap blocker, although skill set will not be conducive to a lot of third down reps or every down role.

Elusiveness: Doesn't have a lot of wiggle but does know how to use head fakes to produce a false step and create a little extra space to work up the field. Breakaway speed is only modest, doesn't have a lot of long speed juice, nor burst out of a cut to pull away from a filling defender.

Receiving Ability: Former H-Back entering college level, effective hands. Has been used as a weapon to flare out into the flats or be motioned across the set and attack the short areas of the field. Can be flipped up on wheel routes against LBs and successfully create separation.

Short Yardage Skill: Powerful short yardage player with ability to drop the pads and churn out a tough yard. Has moved the pile with foot action and balance to spin and peel off of tackle attempts on multiple occasions. Has a quick press up into the teeth of the POA to gain momentum.

Football Intelligence: Transition to a full time RB is only a two year journey, but clearly has a natural feel for testing the waters between the tackles. Most success comes from inside reps where given ability to read inside gaps and make COD cuts as needed.

Effort: Smash mouth runner. Fun to watch press for yards and twist/spin/pinball off of would be tacklers. Throws weight around as appropriate, but ultimately can be relied upon to charge forward and finish runs.

- Three Cone Shuttle: 6.91

RB Combine Avg. (03-16): - Short Shuttle: N/A 4.35 RB Combine Avg. (03-16): - SPEED Score: Average Score: . confidence of a closer, punishes defenders by putting the pads down. Tread on the tires is light, less than 450 carries through four years of college.

Balance: Has some impressive reps collecting balance after reaching to catch a ball or pivoting away from a would be tackler. Has the natural athletic ability to extend plays and not let first contact be an issue. Strength to absorb first contact and finish forward is strong as well.

Pass Protection: Results are mixed, largely due to hand strike and consistency establishing first contact. Has a great frame for pass pro and shows good intention to step up and challenge blitzing defenders early in the play, but needs to quicken and clean hand strike.
Vision: Can be a half second late to see an open crease transitioning out of the mesh point and into attack mode. Slight hesitation will allow second level flow to pin potential long runs. Will stop feet when out of room at the POA and be slow to gear back up to speed.

Feet/COD: Feet get muddled working into the line of scrimmage unless able to step confidently into the gap. Has twitch out of a cut to be effective on outside zone plays. Will make lateral cuts work but is not going to quickly vacate a gap with lateral COD.

Durability: Has never been tasked with carrying the full load

## FILM ASSESSMENT

## Games watched: Texas Tech (2016), Oregon (2017), Stanford (2017), Utah (2017), UCLA (2017)

Elusiveness: Pretty potent mix of power, speed, explosiveness and agility, but must continue moving in order to make full use of athletic profile. Has wiggle, a devastating shoulder charge and makes hard (but not springy) cuts on feet. High hipped runner, won't turn on a dime easily.

Receiving Ability: Is a strong receiver out of the backfield. Usage in 2017 felt forced in comparison to 2016, with nearly 500 yards receiving. Has made some impressive receptions out away from the body and athleticism can be potent as an unoccupied check down target.

Short Yardage Skill: Has good lean, power and burst to push the pile. Will get stuffed up if defenders are able to push through the POA and create a pile on the floor; as lateral foot quickness limits ability to pivot late or cut out of harm's way.

Football Intelligence: Is still more of an athlete than a true technician as a ball carrier. Hasn't been afforded a lot of clean reps to run and when he has, hasn't been able to consistently get a feel for pressing into the LOS. Zone runs will require patience and development.

Effort: Irregularities in production do not stem from a lack of effort. Has been a fixture on the special teams units as well as a return player. Does well to make the most out of disrupted carries.

# KyleCrabbs 2018 NFLDraft Report <br> <br> Ito Smith, Running Back \#25 

 <br> <br> Ito Smith, Running Back \#25}

- Carries/
Start:
2016
Carries/
Start:
2017 Top Competition: Kentucky, Tennessee, Florida State

Start:

Games watched: Louisiana State (2016), Kentucky (2017), Tennessee (2017), Florida State (2017)

Vision: Has good patience to wait out a gap when pressing into the LOS. Has enough quicks and trust in lateral mobility to slip into a developing crease while stringing out the run. Has good anticipation for second level flow and will come to balance early to slip a tackle attempt.

Feet/COD: Feet are quick. Consistently balanced and shows good ability to extend the feet to collect momentum and stop before changing direction. Short area quickness is very strong thanks to natural quickness in the feet and mobility in the lower half.

Durability: Has a lot of tread on the tires but also does well to recognize contact and brace body. Runs low to the ground and is put together well to successfully absorb contact. Has proven ability to endure high work loads and runs hard through the end of games.

Balance: One of best traits, to consistently step with the feet and keep a dynamic base underneath hips and allow for cuts in a moment's notice. Has low hips to absorb contact on body shots and not be knocked off course.

Pass Protection: A for effort, F for results. Simply doesn't have the length, frame or power in the lower body to stave off rushers. Capable as a cutter but if asked to stand into an interior gap and take on a rushing LB head on is not going to be able to stun, anchor and absorb.

Elusiveness: Has good shiftiness and balance to his game but doesn't have a lot of explosiveness. More of a jitterbug than twitchy player to drive out of a hard cut. Long speed is not great and won't break off a lot of consistent chunk gains down the field.

Receiving Ability: Active receiver who should have no problem stepping into a receiving role. Hand size is a non-issue as a check down back out of the backfield and won't be harassed with regularly when trying to catch the ball.

Short Yardage Skill: Does not run with a lot of power, capable of getting pads underneath a single tackler but is not going to be able to consistently churn the pile unless given a lot of help from the rear. Does get small behind the OL to pop out the other side and lose LBs keying his flow.

Football Intelligence: Feel as a runner is effective and shows versatility to play in a gap or zone scheme, although foot quickness and vision lends best to playing in a zone scheme to be flexible and use reactive quickness to find additional running room.

Effort: Runs tough. Feet are constantly in motion and puts forward good effort in plays where not designated as a primary ball carrier.

## FILM ASSESSMENT

Games watched: Southern Cal (2016), Washington (2016), Nebraska (2017), Arizona State (2017), California (2017)

Vision: Does not do well when tasked with reacting to late movement at the line of scrimmage. Has tendency to press up into hole regardless of push at the point of attack. Too often guilty of running into the backs of teammates instead of hitting cuts into the second level.

Feet/COD: Struggles greatly with putting foot into the ground and springing into openings along the line of scrimmage. Turning the corner is a labor as well, issues appear to be centered primarily around tightness through the torso and hips. Struggles to produce steep angles and catch foot in the ground.

Durability: Struggled through injury in 2016 after two seasons of $250+$ carries. Does get better later in games thanks to "finisher" mentality and strength. Opportunities to carry the load have been ample throughout career, has frame to sustain pounding between the tackles.

Balance: Natural center of gravity is low; has some strong flashes of absorbing contact and keeping balance. Runs like a pinball when taking body shots, easily absorbing blows to the lower half. Does not sustain same center of gravity when forced to move laterally.

Pass Protection: Powerful frame serves well to address and attack defenders with purpose. Was largely untested in this area but has the physical tools required for effective role and niche if needed.

Elusiveness: Does not possess a great deal of wiggle or short area quickness but does possess notable power to drop the shoulder and work through soft contact or smaller bodied tacklers. Will create YAC on account of power when charging defenders square.

Receiving Ability: Has had success with cleanly catching the football; does have natural hands and ability to bring in a throw away from the body. Has in stretches been flexed out of the backfield to run routes as well.

Short Yardage Skill: Leg drive and frame promote low center of gravity, capable of falling forward in one on one situations in the hole. Does need to continue to work on patience in the backfield to not stonewall momentum by pressing into back of blockers.

Football Intelligence: Struggles with anticipation and finding space to maximize runs. Has not been tasked with processing full boxes often courtesy of spread offenses run out of Oregon in recent years.

Effort: Never lacking in effort. Runs hard and with intent to make tacklers miss; understanding when to throw free arm to negate a tackle effort and when to put head down.

## FILM ASSESSMENT

Games watched: Clemson (2016), South Carolina (2017), Louisville (2017), Arizona State (2017)

Vision: Often afforded clean spaces to work up into after receiving the football, but has illustrated a very strong ability to set up tacklers prior to first contact with subtle steps and create a favorable angle to cut back out of.

Feet/COD: Feet are light and carry weight extremely well. Is a twitchy runner between the tackles. Suddenness translates to working out in space as a route runner as well, has big time bounce out of a cut to accelerate quickly and create separation from defenders.

Durability: Light, lean frame is a cause for concern. Has a good deal of tread from 2017 but overall touches are extremely low. Has a light lower body and is not going to grind out a lot of yardage late in games to act as a finishing runner with high work volume.

Balance: Has terrific balance. Does well to stay collected after contact and continue pushing up the field. Has good body awareness to brace for contact before cutting or moving late to diminish contact on the body.

Pass Protection: Has performed admirably to step up into an interior gap and physically challenge blitzing LBs but does not have the frame for protection. Effective in effort but lack of anchor and strength in the lower body are barriers that will prevent a role from being given there long term.

Elusiveness: Has a notable amount of wiggle, will juke hard off the plant foot and get lateral width, carrying speed effectively through the cut to continue acceleration and create a chunk gain. Has great balance to pivot or spin off of contact and keep feet collected.

Receiving Ability: Highly used receiver in creative NC State offense. Often flexed around the set and afforded the chance to run routes in the shallows, likable experience and showcases great hands to cleanly see the ball in away from the body. No issues with trapping the ball against frame, clean receiver.

Short Yardage Skill: Limited leg drive, although intent to run hard and drive the feet has allowed for some nice RAC generation. Was mixed in during season as featured back, did not receive a lot of short yardage carries. Natural leverage due to frame can be an asset.

Football Intelligence: Versatility and usage in a number of ways has lent itself well to finding ways of contributing despite non-traditional player split. Natural skills and awareness in the open field are very effective, a bit quick to work into the POA, could afford additional patience vs. bottled up runs.

Effort: Notable contributor on special teams in addition to two way performances as a rusher and receiver. Utilized not just as a return man but also on punt coverage duties, making plays down the field to down balls inside the 20. Fun, toolsy player who hustles.

RB Combine Avg. (03-16): 9'9"

- Three Cone Shuttle: $N / A$
RB Combine Avg. (03-16): Short Shuttle: 4.34 RB Combine Avg. (03-16): SPEED Score: Average Score:

Vision: Appears capable of working through inside zone reps with ability to pick up on a developed lane to cut on shallow angles laterally. Is admittedly much more effective in gap/ power and when able to follow a pulling guard or fullback into the lead hole and power through a crease.

Feet/COD: Feet are violent and light when able to work in open spaces or on shallow angles. When forced to cut hard laterally or explode off of a cut does not have the same effect or ability to vacate with suddenness.

Durability: Questionable long term sustainability given running style and some dings already. Light college workload should help provide life at the NFL level and allow a grace period before hits really being to add up. North/south runner with a wearing style at first contact.

Balance: Runs on a more narrow frame, doesn't always trust feet to plant hard away from the hips to collect with suddenness. Ability to absorb contact and stay upright with body contortion suggests better ROM through lower half than is consistently illustrated.

Pass Protection: Stands in firm, has a sturdy frame and takes aggressive charges into the POA to ensure an active challenge as compared to catching blows. Needs to ensure feet stay moving and is able to stay framed after first hit.

Elusiveness: Has some surprising mobility and balance. Does well to contort lower body to step over and around defenders. Carries a lot of power to keep defenders off balance and dictate the tackle attempt in the open field. Lateral mobility is only pedestrian.

Receiving Ability: Only modest usage as a receiver, although remodeled frame did allow for some added reps out of two back sets in 2017. Has primarily been featured releasing out of the backfield, although reps featured flexing out wide have not produced much results.

Short Yardage Skill: Must be afforded a crease to put pads through, but will run through the pile in such instances. Will have a hard time with a pile of bodies around feet to stay upright and convert when having to redirect initial momentum and get started again.

Football Intelligence: Troubling trend of diminished carries, will need to re-affirm handling of playbook was not a root cause. Did look comfortable in power running schemes to follow blockers and allow runs to set up. Has good open field vision and can force a missed tackle consistently at 1st contact.

Effort: Has maintained a professional attitude towards carry log and market share, citing "stay out the way" as it pertains to letting fellow RBs be successful. Runs hard, does well to take first contact and fight for a crease, spinning off of would be tacklers.

## FILM ASSESSMENT

Games watched: Texas Christian (2016), Baylor (2016), Virginia Tech (2017), Oklahoma State (2017), Iowa State (2017),

Vision: Fails to pick up on late developing creases in peripheral vision, often times will run into back of blockers if no immediate hole has been produced. Open field awareness of tacklers in pursuit is much better than lane anticipation behind the LOS.

Feet/COD: Feet are capable of hard steps. Has a nifty jump cut in one on one situations. Lateral agility and burst enable created yardage after contact. Has good foot activity working to the LOS to stay balanced.

Durability: Is not a grinder, nor runs with the physical style required to break down defenders late in the game. Doesn't have powerful lower body and can run high cut at times, which will need to be monitored to prevent body blows from adding up and taking toll.

Balance: Looseness in lower body and foot quickness allow for some nimble cuts to be strung together and picking way through second level. Does well to collect off of lateral contact or spin off of arm tackles by smaller defenders before continuing up the field.

Pass Protection: Frame is lean and not ideal for working against NFL LBs in the pocket. Hesitant and fails to step forward and challenge with consistency to sustain integrity of the pocket when tasked with interior gap responsibilities.

Elusiveness: Has terrific wiggle, mobile lower body and steep angles allow for springy cuts and lateral agility. Foot quickness allows for hard shake and explosion into space. Has a good secondary gear to turn on the jets and break pursuit angles in space.

Receiving Ability: Has flashed some nifty hands on numerous occasions but has not been utilized as a piece of the pass game consistently. Has to make strides in protection to stay on field in more third down roles and majority of targets have come as a swing/flat target.

Short Yardage Skill: Has done well to improve leg drive on contact but is much more of a burst/agility runner than a power runner. Lack of flexibility to press ball into a late developing hole limits success in creating conversions without a hard push up field.

Football Intelligence: Has had a lot of success stemming from spread offense, not frequently asked to handle heavy volume box or make reads in the backfield. Will have an adjustment in relation to handling different looks in live action before running style can fully shine. Has some ball security issues.

Effort: Runs hard, looking to hit home runs once into second level and beyond the line of scrimmage. Will need development before tasked with a three down role, instead has look of an early down runner. Good teammate and has sprung into action to try to throw blocks to help teammates make big runs.

RB Combine Avg. (03-16):

- SPEED Score: Average Score:
total of 999 touches from scrimmage on offense. Has been a
grinder in many games, taking heavy workloads into games and using tireless running style to break down defenders trying to tackle repeatedly.

Balance: One of better traits thanks to low hips and center of gravity. Will absorb contact and look to pivot or spin off and pinball into open space. Cuts are always calculated, even if not the most dynamic to cover large areas of space and can collect off the cut and keep momentum forward.

Pass Protection: Doesn't have a great anchor or ability to strike on first contact, but does have the assertiveness to step up and challenge early to provide some cushion for passer in the pocket.
Vision: Often relies on blocking schemes up front to generate space for chunk gains. Is not a creative runner when pressing into the LOS, content to hit designated holes and take when offensive line has been able to produce with movement at the POA.

Feet/COD: Feet are not springy and fail to allow for sudden changes of direction. Lacks burst in step to put foot in the ground and get north south in quickly developing alleys for zone concepts. Has good foot activity in the pile to fight for yards.

Durability: Impressive long term starter at the college with a total of 999 touches from scrimmage on offense. Has been a

P

## FILM ASSESSMENT

Games watched: Florida (2016), Tennessee (2016), Mississippi (2017), Georgia (2017)

Elusiveness: Does not illustrate a great deal of lateral mobility or hard cuts. Has a low frame and has ability to sneak up on second level defenders entering the hole by hiding behind offensive linemen. Has modest balance to twist and absorb contact and fall forward.

Receiving Ability: Primarily a check down and short receiver, although no reason to doubt ability to catch the football. Hands, plus blocking ability offer a reasonable role as a third down running back at the next level.

Short Yardage Skill: Does not run with an exceptional level of power. Does have the needed leverage as a runner to get under the pads of defenders and is willing to stick face in the fire and work for a tough yard. Leg drive doesn't feature great power to push through flush contact.

Football Intelligence: Highly experienced player who has done well to make the most of a modest physical skillset. Does not have the ceiling of many of his contemporaries due to physical abilities but should come in ready to contribute on a niche level immediately.

Effort: Runs hard. Does well to challenge free running defenders in protection and put head down as needed when squaring up with potential tacklers. Carries out effort out of stance consistently, won't tell defenders when or where he is a primary.

RB Combine Avg. (03-16): -Short Shuttle: RB Combine Avg. (03-16): SPEED Score: Average Score:

Balance: Keeps balance against contact well despite high se frame, able to absorb a blow and sustain forward momentum. Has take an unimpeded shot in the backfield on multiple occasions and continue up the field to prevent a minus play behind the LOS.

Pass Protection: Terrific frame. Big body and steps out of mesh point on play actions effectively to square on free rushers. Has the anchor needed to settle against big, powerful defenders and would be an asset to the pocket/protection schemes. Is accustomed to blocker due to Wildcat packages.
Vision: Feel as a runner looks to be more effective if given a clean avenue through first contact, has good feel of the second level but can get bottled if not provided an easy first read into the LOS. Relied upon raw power to create openings in many cased before feeling a soft space in defense.

Feet/COD: Feet do not play with a great deal of range of motion, doesn't offer a lot of cutting ability to play and redirect hard. Instead, prefers to keep feet centered under the hips and trust in ability to slide laterally before transitioning back up the field.

Durability: Health concerns are a big uncertainty. Had 2017 concussion thrown in on top of 2016 knee injury that cost him final 8 games of season. Has not been given more than a handful of carries in a vast majority of career games at the college level.

Balance: Keeps balance against contact well despite high set no

## FILM ASSESSMENT

Games watched: San Jose State (2017), Southern California (2017), Oklahoma State (2017), Iowa State (2017)

Elusiveness: Does not have great long speed or short area acceleration. Has some modest lateral step mobility but lower body angles are not planting and cutting at high angles. Instead, is a pure bulldozer, will run over and off of bodies with violence and create yardage.

Receiving Ability: Usage has been sparing but does have experience rolling out of the backfield to attack both as a check down or as a receiver up the sideline on wheel routes. Lack of great long speed will prevent a lot of natural separation on down the field targets.

Short Yardage Skill: A big, bruising back who can be relied upon to get the needed yardage in a "must have" situation. Will make chicken salad out of chicken $s^{* * *}$ if pressured early in the backfield, able to spin, take contact, fall forward, and get a plus gain.

Football Intelligence: Still requires some development to read the LOS stepping out of the mesh point. Has not been able to stay fully healthy ever since exploding into record books with promising freshman season.

Effort: Runs hard, looking to fall forward and fight through contact. Active with the free arm to stiff arm or swipe against arm tackles. Ability to maximize yardage on any carry and keep the feet running is a key trait due to only modest explosiveness in short spaces.

Games watched: Baylor (2016), Georgia (2016), Iowa State (2016), Oklahoma (2017), Stanford (2017)

Pass Protection: Far too light and lean to be contributing as a pass protector. Does not address or approach blocks in a favorable way, often times trying to simply throw in a cheap shoulder and chip pass rushers on their way by. Will not be called upon for duty here.

Vision: Tendency to press up into the LOS too quickly and make angles steeper than they need to be for cuts. Has run into the backs of blockers both pressing the LOS and when out in the open field. Effective creating a false step to manipulate defenders in one on one.

Feet/COD: Feet are extremely quick and active but he needs to become more efficient with steps, gets caught galloping in place and will have athletic ability and quickness neutered by too many steps in place.

Durability: Very lean bodied runner. Doesn't run with a lot of power behind the pads and does not have a desirable build for a full time NFL RB. Lacks mass in the lower body and will be easily knocked off line by contact, isn't going to be able to handle a high volume of workload.

Balance: Has terrific balance in space, capable of picking way through high traffic areas and pinballing out into open space. Foot speed allows for regularly catching momentum at awkward angles and trying to climb up the field and into space.

Elusiveness: Very slippery in tight spaces but has poor habit of never gaining any ground while picking way through traffic, allowing defenders to close in from the back side and corral

$$
\begin{aligned}
& \text { with group tackling efforts. Good burst and long speed in the } \\
& \text { open field. }
\end{aligned}
$$

f

Receiving Ability: Natural receiver who has been flexed out into the slot and regularly found targets. Effective check
down receiver and has had success with delayed shovel/dra into the slot and regularly found targets. Effective check
down receiver and has had success with delayed shovel/draw concepts to break first line of defense and explode up the field for a chunk gain.

Short Yardage Skill: Offers nothing in this specific area of the game. Too impatient to let blocks develop before cutting out of the pathway of pursuit but too lean and lacking in lower body power to put the head down and run through tacklers at the POA.

Football Intelligence: Has benefitted from a lot of light boxes
with carries, seemed overwhelmed against more physical
defenses willing to load the box and take away easy running
lanes. Transition to a pro offense will be aided by ability to
contribute as a receiver early on.

Effort: Has very solid effort, although sometimes can be guilty
of trying to do too much. Will create some negative plays by
trying to peel back against the grain and give ground into the
backfield. Has to be more committed to a single cut and driving

RB Combine Avg. (03-16):
SPEED Score:
93.0

Average Score:

Vision: Is not particularly gifted as a ball carrier. More frequently makes good on touches to quickly press up into the line of scrimmage and look to create yardage with push and urgency. Has a modest lateral step to shift late if able to identify a crease.

Feet/COD: Feet show good leg drive, has desirable ability to stay pressing forward at the line of scrimmage and take on contact. Does not have a lot of lateral mobility or ability to cut and vacate space.

Durability: Big, powerful body with strength to pound on smaller bodies trying to fill the hole. Has never been offered a role as a grinder or high volume carry player, so often fresh and able to make the most of touches with aggressiveness. Not phased by the prospect of contact.

Balance: Carries weight very well for size, has ability to redirect and break off of route stems as a receiver effectively. Does not overextend as a runner, always feels to be in control to change directions, at times at the expense of burst.

Pass Protection: Sturdy frame and size enable for effective reps to eat second level blockers. Has a good nose for navigating the pocket as a blocker. Should be a strength of game in the long term.

Elusiveness: Runs with good power and balance but does not bring a lot of suddenness to open field situations and as a result will have issues forcing a false step in head up tackle scenarios. Does not have a great deal of long speed to break second level angles on a quick hitting play.

Receiving Ability: Is a crafty backfield receiver. Shows good timing to slip out into the second level with delayed routes. Effective false action and fake blocks before climbing up the field and hitting the seam. Has excellent hands and good size for contested targets.

Short Yardage Skill: Doesn't have great vision but in gap/ power situations in short yardage has no issues with getting square to the LOS, running the feet and creating a push behind teammates. Is capable of churning the pile and forcing movement of the POA.

Football Intelligence: Tweener athlete that should be considered a flex piece. Versatile and can provide 3 down value for teams. Can be flexed to TE for single back sets and then moved back into the backfield on short yardage reps. A true "football player" first.

Effort: Consummate team player in every sense. Does a lot of unsexy dirty work to help spring teammates and be used as a decoy frequently to create confusion for defender's eyes. Runs incredibly hard and shows good determination after the catch to get desired yardage.

Average Score:

## FILM ASSESSMENT

Games watched: Wisconsin (2016), Michigan State (2017), Toledo (2017), Southern California (2017)

Vision: Does not offer a lot of creativity when pressing up into the LOS. Will drop the head and try to press through immediate space and work up the field before looking to work to space. Appears to be limited as it relates to peripheral vision and seeing scraping defenders into area.

Feet/COD: Will not illustrate desirable short area COD skills to be able to pick way through a congested box. Has issues with getting momentum started again after being forced to come to a complete halt and try to slip past a shooting defender.

Durability: High level of production and usage at the college level. Over 1000 career touches from scrimmage is notable for longevity of career at the NFL level. Runs tough and is
willing to absorb contact in an effort to create yards and lean on defenders.

Balance: Ability to create a missed tackle is centered around being able to stay upright on feet, either on a misleading step or spinning off of contact and using balance to recollect and work up the field.

Pass Protection: Does not possess an anchor for challenging free runners, will step up to take contact but be collapsed and concede separation after first punch opening the door for a defender to step through the block and into the passing lanes of the QB .

Elusiveness: Is not particularly quick or sudden with feet, nor does he possess notable long speed to outrun defenders in the open field. Has fair levels of balance but isn't capable of pushing the pile if bottled up unless possessing a full head of steam prior to contact.

Receiving Ability: Quick to get out into routes, but gets off track if play is extended. Often times flips eyes back to the passer and will get caught drifting in space, would like to see a more concentrated effort to find a soft area to sit down into and make available.

Short Yardage Skill: Lower body strength is not a notable plus but if given space to get a full head of steam is capable of rushing into the pile and getting low to create some movement and churn out some hard yardage. Isn't going to overwhelm tacklers in one on one head up tackle reps.

Football Intelligence: Is not especially effective against top levels of competition, largely due to being physically overwhelmed and not showing crafty skills to create yardage against bigger, faster and stronger defenders than what he draws in the MAC Conference.

Effort: Strong effort player, have no issue with work to maximize runs and willingness to put the head down as needed to try to fall forward.

## FILM ASSESSMENT

Games watched: Michigan (2016), Pennsylvania State (2017), Ohio State (2017), Michigan State (2017), Wisconsin (2017)

Vision: Is most effective peeling back against the grain between the tackles. Has a good feel for over-pursuit and likes to bend back and bounce outside. Can get stuck waiting for alleys to develop if tasked with working to the corner on outside runs.

Feet/COD: Feet pound the turf hard when pressing into an undeveloped hole, will step hard and produce force to change directions. Is not the most fleet of foot and steps working through high traffic areas don't always clear potential low tackles.

Durability: Did well to stay healthy and play as more of a grinder in 2017. Doesn't have a lot of miles on legs in comparison to some contemporaries. Runs hard and can catch some second level defenders napping and punish to finish runs but does better avoiding contact than actively seeking it.

Balance: Has very good skill in sustaining balance while stringing together lateral cuts in an effort to pick way through the LOS. Foot quickness and some lack of flexibility can neuter ability to absorb contact and collect balance before working back up the field.

Pass Protection: Does not approach the role with very much gusto or enthusiasm. Will be quick to cut defenders working through an open gap, doesn't often show trust in anchor to absorb contact and eat up a bull rush.

Elusiveness: Often slips out of tackle challenges courtesy of nifty lateral cuts. Hard jump cuts but doesn't often pair a secondary move in the open field to get momentum working back up the field, will get wrangled up. Doesn't have a lot of looseness in the hips to cut on steep angles and carry speed.

Receiving Ability: Has proven worth as a valuable option out of the backfield with over 50 receptions in each of the last two seasons combined. Does well to get eyes up field after the catch and identify any open space to work to. Does well as a screen receiver, in the shallows as a check down and in the flat.

Short Yardage Skill: Has a fair amount of ability to duck in behind linemen and run the feet to push the pile. Is aided by a stocky frame to lean and push for extra space, but doesn't have lower body power to absorb head up contact and fall forward with consistency.

Football Intelligence: Natural feel is present as a runner to identify open space. Has good ability to pivot early in runs to help produce further yardage. Good awareness along the sideline to produce YAC as well.

Effort: Has some awful reps of going through the motions, largely on quick throws and pass protection reps when not challenged initially at the snap. Will need to address the importance in treating every rep as a live action play and produce more urgency as a supplementary player.

## FILM ASSESSMENT

Games watched: Arizona (2017), Tulane (2017), Prairie View (2017), North Carolina A\&T (2017)

Vision: Has good understanding of peel back opportunities on outside zone runs, has feel for defensive pursuit and understanding on when to bang runs back up in between the tackles. Can be guilty of getting a bit too greedy trying to stretch the defense and make a big play.

Feet/COD: Feet are very sudden and allow for a quick cut on a dime. Skills are centered more around quickness than explosiveness. Effective coming to balance in the open field in one on one situations.

Durability: Extremely small. Well built but goes down on contact easy and does not run the football with a grinding style. As a result, touches should be selective and should not be relied upon to be an every down back or a finisher late in games. More of a change of pace player.

Balance: Illustrates some very impressive balance to shrug off weak tackle attempts and toe the sideline. Has ability to sustain forward push while cutting and stay upright and gaining yardage. Loses footing on a direct blows laterally, however.

Pass Protection: Will offer nothing from a protection standpoint. Is inexperienced, short armed, not powerful in the upper body and would be grossly miscast playing within the pocket. Would not endorse a role that features any reps as a pass protector.

Elusiveness: Low center of gravity courtesy of frame and will jitterbug through high traffic areas. Effective forcing a false step in the open field but does not possess the explosive cut ability to quickly vacate an area. Start/stop acceleration is strong.

Receiving Ability: Awareness to make self available in extended plays has come in handy on a number of plays. Has a soft set of hands as a receiver, little issue pulling in check down passes with touch. Primarily utilized in the screen game and quick passing on extension of run game.

Short Yardage Skill: Does not run the ball with a lot of leverage, despite compact frame. Is more eager to leave feet and get vertical in an effort to avoid tacklers than put the shoulder pads down. Is willing to go toe to toe with defensive backs in the open field.

Football Intelligence: Plays a bit wild and will need to be more consistent making reads at the LOS, looks to hit too many home runs and as a result leaves some chunk yardage on the field in favor of bouncing outside and trying to pop a big gain. Outside zone and pass catching are best roles.

Effort: Needs to be much more aware of ball security, plays with the ball loose and exposed far too often. Contributor on special teams as well, dynamic punt and kick returner in the open field thanks to long speed and vision in open spaces to break a big gain.

WR Combine Avg. (03-16):

Games watched: Baylor (2016), Texas Christian (2016), South Florida (2016), Connecticut (2017), Houston (2017), Texas Christian (2017), Memphis (2017)

Route Running: Smooth at the top of routes and uses linear Vertical Receiving: Surprising acceleration and speed to burst to advantage to force early commitments from DBs in overtop coverage prior to breaks. Knows how to use hand to check potential bumps. Strong and effective playing through press coverage. Tree is largely vertical and back to LOS.

Hands: Is guilty of the occasional drop courtesy of moving eyes up the field prematurely. Strength in hands is present and notable to squeeze the ball despite being harassed at the catch point. Capable of playing with extension to receiver as compared to trapping into the body.

Contested Catch Ability: Size is an X-factor that opposing teams must account for at all times, specifically in the red zone. Has ability to elevate vertically and pluck the ball from sub-optimal position, courtesy of HS and college basketball background.

RAC Ability: Creative. Will use free arm, hard cuts and balance as a way to break back across the grain of defenders flowing in pursuit. Is a nightmare for defensive backs to challenge one on one after the catch courtesy of length and aggressive approach.

Football Intelligence: Has done well to develop throughout course of college career, was primarily a DB recruit out of HS. Route nuances continue to pop up throughout more recent film and is becoming more efficient in using size at top of routes, at the catch point and at the LOS.
carry up the field with quickness and overtake defenders playing off and with leverage. Has a good read on high arching throws to run under the football. Length adds extra element to catch radius.

COD Skills: Smooth and fluid but not especially sudden. Size is a natural restrictor to high COD. But running style features hard, violent cuts to force a change of momentum and will break pursuit angles after the catch. Carries speed through shallow breaks.
Speed: Has more than one would expect at first look. Acceleration is notable as well to gear up quickly and stack defenders early on in routes. Play speed allows for creating separation on all three levels of the field without issue.

Competitive Toughness: Lovely attitude to the game, will play snap to whistle on any and every given rep. Progression priority, run/pass, etc. do not influence a hard release off the line, and visible effort at any and all times.

Block Ability: Dominating presence on the boundary as a blocker. Feet move with intent to frame and strong hands are very difficult to shed in the secondary. Has walked defenders out of the picture on more than one occasion blocking up the sideline.

## FILM ASSESSMENT

## Games watched: Navy (2016), Western Kentucky (2016), UCLA (2017), Connecticut (2017), Navy (2017)

Route Running: Highly effective in creating space on sharp angled routes; high quickness in COD opportunities. Has ability to separate vertically and work behind defenders courtesy of skill on route stems to set up defenders. Effective head fakes and false steps to sell routes.

Hands: Terrific hands, overall. Able to palm the football and on multiple occasions has done so in live game action to add length to catch radius. Soft and able to cradle the football through contact; does not get separated from the football easily.

Contested Catch Ability: Is not the biggest or strongest, but still has a strong track record of finishing contested catches courtesy of body control, hands and football intelligence. Will not tip off ball location prematurely to defenders when tracking in the air.

RAC Ability: Pretty slippery in one on one situations. Has a knack of utilizing the free arm and forcing defenders to slide off of body if tackle attempt comes from off of the hip. Is not going to run through bodies but has good balance to shrug off soft attempts.

Football Intelligence: Patient in working off of the LOS and does well to fake moves across the hips of defensive backs to manipulate coverage and create clean breaks. Does well to not flash hands prematurely before extending or working back to the football.

Vertical Receiving: Has enough juice and burst to get hip to hip quickly against defenders trying to play up in face at the line. Knows how to bump defenders off of hip and create space at last moment. Length and catch radius for late adjustments to the ball are somewhat limited.

COD Skills: Jitterbug style athlete in short areas. Effective in shaking defenders one on one with jukes and forcing a false step. Utilizes feet and quickness to gain lateral width in avoiding a jam coverage attempt at the line of scrimmage.

Speed: Looks to have consistent speed, not just vertically but through route stems and also when tasked with getting up to top speed with quickness. Smooth athlete, illustrates a second gear and thus is not a build up athlete.

Competitive Toughness: Strength is not a staple of game but also not a liability. Simply a restriction based on stature; but considering size is pretty tough in all phases (contested catches, as a blocker, in run after catch situations and so on). Plays fearless over the middle of the field.

Block Ability: Is not notable in this area. Hand work and effort is strong; but physically doesn't stack up as anything more than a marginal blocker against NFL boundary cornerbacks.

## FILM ASSESSMENT

Games watched: Michigan (2016), Nebraska (2016), Texas (2017), Central Florida (2017), Ohio State (2017), Indiana (2017), Michigan State (2017)

Route Running: Has great quickness at the top of routes and is deliberate with release to get across the face of DBs and set up for break down the field. Uses arm over move and springy steps to get back across defensive backs and uncover on deep patterns.

Hands: Has only let a few throws eat him up with a late reaction. Bails out QB with good hands catches away from the body and has clean catch radius to extend for the ball. Will play ball aggressive when working back to the LOS. Soft hands when first seeing in the ball.

Contested Catch Ability: Lack of length and size are natural barriers, though leaping ability and hands will allow for plays to be made in difficult targets. Has a good level of concentration to not be distracted by hands but needs to try to win body positioning on routes square to LOS.

RAC Ability: Blessed with strong vision, good creativity, springy cuts and an explosive step. Balance and ability to shrug off arm tackles is supplemented by an active free arm and good spatial awareness to make the most of space along the sideline. High volume screen target.

Football Intelligence: Shows a lot of nuance. Route running is polished and feet are clean getting out of breaks. Has a good nose for breaking off stems against off coverage or zone to find space and provide an easy target for QB. Hard to teach knack for big plays.

Vertical Receiving: Has a great second gear. Play speed on clean footing is terrific and will easily roll past defensive backs if left one on one. Has good acceleration initially off of the LOS to force DBs to commit and flip hips early in the rep. Has ability to cleanly read the ball over the shoulder.

COD Skills: Is highly twitchy and has a great deal of short area quickness. Is sudden on hard breaking patterns with confident feet to pivot and drive off a cut. Likable open field ability, has top tier burst and explosiveness as a runner with the ball.

Speed: Ample speed to burn. Is a big time play threat in the open field courtesy of blazing top end speed. Juice is both in short and long areas, has no issue closing cushion on DBs against off coverage and getting from 0-60.

Competitive Toughness: Effort is strong. Has done well to supplement receiving role: used as a gadget player in special packages and also featured as both a punt and kick returner within the last two seasons, respectively. Is active and engages in role as a blocker on run plays.

Block Ability: Does not have notable length or blocking success but hands are strong and feet are fluid to attempt to shadow, room for growth is present with greater development on establishing first contact and successfully finding a hand fit.

## FILM ASSESSMENT

## Games watched: Colorado (2016), West Virginia (2017), Pittsburgh (2017), Texas (2017), Oklahoma State (2017)

Route Running: When pressing with full speed has a nice get off at the line to press vertical stems hard. Shows ability to head fake and sell false routes. Effective feet and good toe drag to decelerate and break hard. Needs to not round off tops of hard angled routes.

Hands: Reliable in catching the football away from body. Drops have been of the concentration variety, has been caught getting too quick to turn the eyes up field after the catch. Ability to pluck the ball with a late flash of the hands to prevent DBs from making play on extended hands.

Contested Catch Ability: Non-traditional. Plays much larger than size would suggest, but terrific key on the football should continue to produce successful high point receptions. Concentration with defenders flashing at the catch point is strong.

RAC Ability: Good balance. Has nice juice, although not a great deal of short area lateral quickness or wiggle through the hips to generate a false step in the open field. Thick, powerful body comes in useful shaking off soft contact at the catch point.

Football Intelligence: Nuance of route tree is just fine: effective on vertical routes, post patterns, out routes, comebacks with greatest consistency. Sense of timing both at the catch point and on full speed route stems is useful in catching defenders off guard for the ball arriving.

Vertical Receiving: Big time playmaker down the field. Has a terrific knack for stacking with hand usage at the point of potential collision and then quickly identifying the ball in flight to adjust pace and greet the ball cleanly over the shoulder.

COD Skills: Is not especially sudden when having to shift laterally or scale down, although has ability to make a defender miss with mobility in the lower body to alter and avoid contact. Carries speed well through route breaks but needs to recollect out of the break.

Speed: Top speed and initial acceleration off the line when utilized as a primary target is very good. Has fair amount of burst after ball is in hands to explode up the field and gain a strong chunk of yardage.

Competitive Toughness: Has developed some poor habits throughout time in spread offense. Complacent on the back side of the play. Would like to see more consistency in the urgency of route stems. Has been caught complacent on the play side of runs to the boundary as well.

Block Ability: Has not shown desirable traits, habits or skills as a blocker. Often times takes poor stalk angles and will let a defender plant and drive across his face in order to challenge the ball carrier fully. Does not show great hand usage for establishing controlled fit on defender in space.

Games watched: UCLA (2017), Arkansas (2017), Alabama (2017), New Mexico (2017), Wake Forest (2017)

Route Running: Has issues with defeating press coverage at the line of scrimmage, will get rerouted and knocked off course. Quickest on shallow angled routes, needs to quicken pace on hard angles when afforded space to corner and pivot. Needs more variety in vertical stems.

Hands: Guilty of some poor drops, but overall has good hand-eye coordination and has had success catching the ball away from his frame. Shows good ability to control body and still see ball in when working along the sidelines as well.

Contested Catch Ability: Lack of size is masked by terrific leaping ability and explosive athletic ability. Lacks length and can get easily bumped out of position by defenders when elevating for the football in the air.

RAC Ability: Successful screen and short area receiver, is the kind of player able to be manufactured touches and able to thrive in one on one situations. Has good strength through contact and great speed to break angles and bust out of containment.

Football Intelligence: Will need to add more versatility to a somewhat one dimensional route tree but has promise in said area. Great sideline awareness and ability contort/ control body to make the most of afforded real estate on the field.

Vertical Receiving: Has no issue pushing the pace and uncovering vertically against off coverage. Has plus speed and juice to blow past late reacting defenders in off coverage or deep safeties. Proficient at tracking the ball and adjusting to draw DPI or catch underthrown balls.

COD Skills: Has very sudden COD and rapid feet when working square to the LOS and pressing momentum up the field. Would like to see greater fluidity at the top of route stems. Slippery in the backfield to pinball through traffic and create false steps.

Speed: Straight line speed and acceleration skills are both notable plus traits. Has dynamic burst and will defeat lazy/ favorable coverage (off) immediately at the line of scrimmage thanks to $0-60$ speed. Will break pursuit angles in the open field and create extra yardage.

Competitive Toughness: Contributor in the return game as well as a receiving threat. Does not play with ability to dictate defensive backs but has enough play strength to occupy long enough to let ball carriers slip through spaces.

Block Ability: Surprising effectiveness despite lack of size and "oomph" at first contact. Knows how to work body into a position to force defenders to redirect and often times will eliminate from the play as a result.

Games watched: Clemson (2016), Florida State (2017), Colorado State (2017), Texas A\&M (2017), Tennessee (2017), Mississippi State (2017)

Route Running: Masterful at the line of scrimmage to beat press coverage at the LOS. Routes are nuanced, calculated and do well to produce false steps in the secondary and create larger windows. Creates space on all three layers courtesy of precise steps and speed.

Hands: Guilty of a handful of drops but has ability to extend away from body to pluck the ball out of the air. Not afraid to show hands away from body in traffic to snag a ball. Drops appear centered around eyes flipping up up the field prematurely.

Contested Catch Ability: Does not have a notably large catch radius, nor a body to absorb contact without being jarred from body position. Concentration is excellent when fighting off contact and attempting to catch contested targets. Has dynamic leaping ability to elevate vertically.

RAC Ability: Dangerous run after catch option. Has been featured in screen throws and shallow crossers and turned plays into big gains courtesy of balance, cut ability and vision in the open field. Will not run through contact and can easily be brought down with a slight ding.

Football Intelligence: Has gone from special RAC athlete as a freshman to a master of craft. Sense of timing on routes is effective to accelerate at the right time and has good reactive quickness to diagnose defensive leverage and adjust routes accordingly for optimal separation.

Vertical Receiving: Has a great second gear to kick in and chase down vertical throws over the shoulder. Patience at the LOS and awareness to temper release before turning on the jets allows for separation and ability to stack defenders in man or off zone.

COD Skills: Is a delight at the top of route stems and in space as a run after catch player. Feet are rapid and springy to create big cuts and sudden start/stop ability. Can explode out of route stems and establish space on in/out breaking patterns as a result.

Speed: Twitchy. Has great burst off of the line of scrimmage and even better second gear to accelerate away from defenders in the trail position. Capable of sticking foot in the ground and getting to high end speed in no time at all.

Competitive Toughness: Ability to play with physicality is admirable, but not a true strength of game. Has done well to excel and improve as a player in spite of suboptimal environment with a young, unpolished QB in each of the past two seasons.

Block Ability: Effort is strong. Consummate teammate to break down into the hash in effort to pin down defenders and spring running backs for big gains when bouncing outside. Does not have the functional strength to push back defensive backs and will break even on the boundary.

## FILM ASSESSMENT

Games watched: Louisville (2016), Boston College (2016), Alabama (2017), Miami (2017), Clemson (2017), North Carolina State (2017), Duke (2017)

Route Running: Wonderful nuance for a player of this stature. Plays with quickness, has loose hips and dynamic base to cut with suddenness and burst at the top of route stems. Feet are developed and enable crisp snap out of initial push up the field.

Hands: Strength in hands is notable and is capable of some stunning catches away from the body. Catch radius is massive and is in comfort to extend away from body to haul in the ball. Not easily dissuaded at the catch point by defenders.

Contested Catch Ability: Is a complete mismatch in the red zone and on back shoulder throws up the boundary. Has effective hand fighting techniques to jostle for positioning prior to the ball arriving on back shoulder throws. Lethal on fades, back shoulder throws and 50/50 balls.

RAC Ability: Balance and body control allow for a late twist out of contact. Uses free hand to catch momentum and regain footing. Has good acceleration after the catch and great strength to pinball smaller tacklers in the secondary for created yards.

Football Intelligence: Awareness along the sideline and ability to control body are very strong. Has good reactionary quickness to identify the football in flight with quickness. Developed route runner with polish to work around leveraged defensive backs and create space for breaks.

Vertical Receiving: Has required long speed to run away from defenders trying to challenge from the trail position. Has great ball tracking skills and pairs with a large catch radius to find positioning to address the football down the field. Aggressive to greet the football.

COD Skills: Much quicker than contemporaries at this size. Unique blend of skills thanks to looseness through the hips to plant hard and explode out of a break. Feet are smooth, not overly sudden.

Speed: Has a good second gear. Smoothness through breaks adds extra layer of pacing to routes to create early separation after snapping off of stem. Has breakaway speed when able to open up strides in the open field and fully make use of lengthy legs.

Competitive Toughness: Handful to bring down and to disrupt at the catch point. Size is simply overwhelming for many defenders, has "my ball" attitude and length to pair with it. Blocking efforts are notable, will trail defenders in the secondary to try to stay disruptive.

Block Ability: Better traits than results, currently. Has needed length, movement skills and strength to lock down defensive backs and seal off the boundary. Instead, is more content to stay framed between the defender and ball carriers.

## FILM ASSESSMENT

Games watched: Oklahoma (2016), Oklahoma State (2017), Memphis (2017), West Virginia (2017)

Route Running: Shows surprising subtleties to routes, effective head fakes and deliberate angles to break off a stem and work back into space. Issues are centered around movement skills, not development and technique as a route runner.

Hands: Very strong hands. Does well to maximize catch radius and has great habits to extend and greet the ball early in pathway as compared to letting into body. Knows how and when to adjust the hands based on the trajectory of the throw.

Contested Catch Ability: Is a nightmare assignment at the catch point due to notable size and strength. Uses frame to box out effectively and will extend to pluck the ball with strong hands. Not often uprooted from initial positioning to address the ball.

RAC Ability: Size and balance allow for some successful chunk gains after the catch. Has effective strength to shrug off lateral contact and keep the feet running. Will not break off big gains minus coverage busts due to lack of long speed.

Football Intelligence: Has polish. Shows good sense of route timing as well to keep footwork clean on route stems before snapping off and into space to uncover Awareness along the sideline has yielded some impressive highlight reel receptions.

Vertical Receiving: Has notable high point ability and effective size to bump defenders off of hip for late separation. Will not show effective ability to run past defenders and stack quickly when pressing down the field.

COD Skills: Very limited, looks tight and labors to try to juke or pivot with quickness. Needs to use length and strength to cross face of defenders as compared to sticking foot firmly in the ground and springing out of a cut.

Speed: Lethargic open field runner, struggles to accelerate off of the line and as a result will labor to force a commitment from patient DBs in off coverage. Does not have great separation skills and must consistently win as a size mismatch unless drawing LBs in the slot.

Competitive Toughness: Has good fight with the hands and intent to sweep off of a jam attempt at the line of scrimmage. Knows how to use size as a bump to establish separation before final cut. Is a handful to bring down at the catch point and after the catch.

Block Ability: Has great length, powerful hand grip and a very large frame to lock out and extend. Does well to sustain a wide base and not let quicker defensive backs slip through a block laterally and into pursuit of the football on outside runs.

## FILM ASSESSMENT

Games watched: Wisconsin (2016), Ohio State (2017), Michigan State (2017), Washington (2017), Michigan (2017)

Route Running: Runs wonderful routes from the slot, highly effective running the dig and slot fade. Has high end short area quickness and is very apt to step on the toes of off coverage to get defenders on heels before exploding out of breaks and into space.

Hands: Irregular and inconsistent. Even when able to corral throws, often times will misplace the hands and have to show great hand strength and concentration with the ball pinned against the body. That said, is effective pinning ball to chest when addressing the ball square to the LOS.

Contested Catch Ability: Good leaping ability and quality concentration to adjust late to throw with bodies flashing in front of face. Ineffective hands at the catch point make some throws more dramatic than they need to be, more effective catchpoint defenders will jar loose some attempts.

RAC Ability: Slippery at first contact. Is quick to flip eyes up the field after initially slipping past first would be tackler. Has good quickness and balance in tight spaces to maneuver around closing in defenders.

Football Intelligence: Highly seasoned player who has proven polish with terrific route running. Understanding of angles and space, how to use them to advantage and do so on the fly against live competition is very impressive. Should be an immediate contributor.

Vertical Receiving: Does well to track the football over the shoulder, has a strong feel for fading into open space while bubbling to the boundary. Has some good leaping ability to try to adjust late to poorly thrown footballs and can bail out QBs in such instances.

COD Skills: Very quick and nimble in tight spaces. Will show good burst, acceleration and sustained speed at the top of route stems, depending on the angle. Effective after the catch to sidestep first contact and step up the field to create YAC.

Speed: Has very good acceleration at the line of scrimmage, will quickly get up the field and in between levels of zone coverage. Ability to create big plays after the catch is complimented with quickness but overall long speed is not a notable strength.

Competitive Toughness: Plays best in space and when not forced to play off of contact. Will struggle some against patient press defenders but will also show ability to manipulate at the LOS and get loose. Effort after the catch is strong to create yards.

Block Ability: Does not offer a great deal of physicality or strength to sustain block attempts in the secondary. Often pressed off of spot and concedes space before trying to slide back in front of the block. Effort is strong, functional play strength is not.

## FILM ASSESSMENT

Games watched: Boise State (2017), Alabama (2017), Utah State (2017), Oregon State (2017)

Route Running: Illustrates a good level of twitch and quickness at the top of route stems. Has the short area ability to break off quickly on hard angles and establish space. Needs to become more effective working off of press and stacking defensive backs early in reps.

Hands: Has had hands fail on a number of occasions, does not always extend to greet the football away from body. Instead will try to cradle in gut and ball will roll around. Lack of high consistency with optimizing catch radius allows defenders to make plays on ball.

Contested Catch Ability: Tough and shows good concentration. That said, lack of extension and size of frame create some natural barriers to playing as a true strength. Can be enveloped on the boundary by longer corners, specifically on deep shots.

RAC Ability: Shows a nice blend of vision, strength, aggressiveness against smaller tacklers and quickness. Is not especially creative with ball in hands but will make a cut and get up field. Effective tunnel screen receiver to peel back and then transition up the field.

Football Intelligence: Runs a vast number of routes and has good timing to trust eyes after snapping off of stem to locate the football. Plays in an offense with timing to optimize separation on targets. Will need to work on concentration to avoid silly drops.

Vertical Receiving: Does not have the ideal long speed to run away from defenders on deep targets against man coverage. Initial burst and acceleration at line is much more effective than long speed. Has comfort in tracking the ball over shoulder and adjusting path.

COD Skills: Quick feet. Has good ability to sustain burst through breaks. Has effective push to work across the face of defenders when granted space. Light on feet to vacate as a runner and create some additional yardage.

Speed: Has enough juice to turn up in the open field and gash defenses with RAC. Speed shines only when given unimpeded space to accelerate and work. Much more quick as compared to straight line fast, specifically as a route runner in the intermediate areas of the field.

Competitive Toughness: Brings a good attitude to play, will not let a minus play turn over into the next play. Good effort after the catch, on ALL route releases and as a potential blocker to get in the way of defense.

Block Ability: Is not overwhelming but has a good set of hands and enough functional strength to latch onto defensive backs in the secondary and push to create enough delay to allow runs to the hash to get up field. Effort is strong to stay active in the play.

## FILM ASSESSMENT

Games watched: Arizona State (2017), UCLA (2017), Oregon (2017), Stanford (2017), Utah (2017)

Route Running: Runs routes with a lot of nuance on the stem. Will force false steps on down field routes with active head fakes. Does well to defeat press coverage and work across the face of defenders to get into a clean break. Works back to the line of scrimmage very well.

Hands: Hands are soft and do well to absorb the ball away from body. Uses every inch of catch radius. Has proven capable of challenging poorly thrown balls away from body to pluck out of the air and bail out his Quarterback.

Contested Catch Ability: Converts into a defender as needed to protect ball security. Does not sustain contact well at the catch point, will get bumped off of spot and can lose hand placement on the ball. Leaping ability is present to elevate in tight spaces and bring down a throw.

RAC Ability: Field vision and creativity with ball in hands is strong. Loose, pliable lower half to plant and cut hard. Has the needed burst to run away from defenders if left unoccupied. Surprising quickness to cuts, capable of stopping on a dime.

Football Intelligence: Natural feel for working in space. Set record for punt returns (9) and shows great vision and escapability. Toes the sideline incredibly well, shows sweet feet. Body control is terrific when addressing the football to greet the ball and work back to the LOS.

Vertical Receiving: More buildup speed but on pure go routes and posts will get ample speed to run away from defensive backs. Adjusts route pathway as needed when addressing the ball in the air. Will contort body late to keep defenders from contesting the throw.

COD Skills: Capable of a hard stop to break pursuit angles and create additional yardage. Carries speed on shallow breaks well and does have the needed hip drop and knee bend to throttle down with suddenness and snap off a hard break as well.

Speed: Deceptive speed courtesy of long strides in the open field. Does have the ability to close cushion in off coverage and force DBs to commit up the field. Second gear in the open field is notable and can allow for big plays in space or as a returner.

Competitive Toughness: Is not overly physical in any aspect but effort level runs high regardless. Has ability to contribute on special teams in addition to role as a receiver. Does not win with strength, would be wise to continue to add extra layer to game.

Block Ability: Will need to add some strength and improve angles if blocking acumen is to improve. Does well to slow play blocks at the snap but will get beaten inside when defenders drive to attack the play, fails to sustain hands and stay in front of the play.

## FILM ASSESSMENT

Games watched: Missouri (2017), Auburn (2017), Oklahoma (2017), Alabama (2017)

Route Running: Has good quickness on route stems, does well to whip off of trajectory and create separation into the field or working back to the LOS. Shows good fight to find favorable positioning on back shoulder throws and plays with good timing.

Hands: Terrific strength in hands to squeeze the football. Had a handful of concentration lapses that led to drops in the teeth of the defense. Strong fingers and illustrates a massive catch radius with strength to prevent DBs from batting out the football.

Contested Catch Ability: Vertical leap to elevate in tight spaces is fantastic. Hand strength and aggressive address of the football often yield wins in tight man coverage. Very effective in the red zone to use size and box out defenders effectively.

RAC Ability: Has good strength and vision after the catch. Won't break a lot of pursuit angles with speed but has balance and body control to twist, contort and collect before working back up the field. Aggressive to put the shoulder down and challenge tacklers.

Football Intelligence: Spatial awareness and body control are two terrific elements of game: knows how to navigate the sideline and also possesses good usage of feet to make sure tight window throws on the sideline can convert.

Vertical Receiving: Does not have a great second gear to stack defenders quickly on vertical presses up the field. Chunk yardage often comes from efforts after the catch instead of beating defensive backs, although has good route running to create a false step vs. off coverage.

COD Skills: Is not especially rapid but step economy is efficient to fake a hard step and sell with a head fake before whipping back into desired pathway. Has great body control in all phases of the game.

Speed: Long speed is not a great strength, will have issues with running directly past defensive backs. Fortunately does show some awareness of varying stems to prevent DBs from squatting on routes and taking advantage of speed disadvantage.

Competitive Toughness: Impressive motor for a receiver, did a lot of dirty work in run heavy offense. Frequently seen stepping down onto LBs and effectively throwing a shoulder. Plays with aggressive "my ball" mentality and wins consistently in contested situations.

Block Ability: Has strong hands and effective feet to step with defensive backs and mirror on the outside, effective strong side blocker to clear out space for backs to turn the corner. Crack blocking is another plus skill to step down and pin LBs.

## FILM ASSESSMENT

## Games watched: Stanford (2016), Southern California (2017), Miami FL (2017), Georgia (2017), Stanford (2017)

Route Running: Has some issues with hard breaks. Slants, posts and nine routes are terrific, showing good nuance with head fakes and angled steps to set up defensive backs for a big cut and explosion into the open field. Will use length to work through press but needs to be less passive at LOS.

Hands: Shows good ability to see ball in from over the shoulder on deeper developing routes. Has a poor habit of trapping the football into chest on targets when working back to the line of scrimmage, needs to improve skills in extending for the football.

Contested Catch Ability: Has great athletic ability and leaping skills to cut off defenders and make adjustments on the fly, but at times is too passive with catching the football to regularly box out and win needed positioning to finish plays.

RAC Ability: Has a good blend of size, acceleration skills, balance and cut ability once turned up the field to break some big plays. Capable of making big time cuts and ducking out of a space with quickness.

Football Intelligence: Must add polish to the finer points of game. Has immediately translatable skills but overall polish could negate high ceiling and potential to see the field on a regular basis in early development years of NFL career.

Vertical Receiving: Speed off the line forces DBs to respect juice and vertical element. Will still run past off coverage and create separation down the field. Tracks the football much better over the shoulder as compared to other targets.

COD Skills: Shows capable quickness on hard cuts at top of route stems but real value comes after the catch. Has terrific bounce and lower body flexibility as a north/south runner to transition into a big cut and attempt to sustain balance.

Speed: Has very good vertical speed and quick acceleration despite long strides to get up to a top gear and stack defensive backs quickly up the sideline. Should have an immediate role in the NFL based strictly on vertical presence thanks to speed.

Competitive Toughness: Would like to see some more strength elements to game. Instead of using size and athletic ability to advantage is often times passive on route stems or in contested situations.

Block Ability: Ineffective blocker on the boundary. Has great traits and size to clamp down on defensive backs but shows little enthusiasm to take on contact. Soft with hands and does not step through contact, is a catcher of bodies on the second level.

## FILM ASSESSMENT

## Games watched: Tennessee (2017), Auburn (2017), Alabama (2017), Chattanooga (2017), Notre Dame (2017)

Route Running: Ineffective trying to play through press coverage at the line of scrimmage. Needs to sharpen footwork and angles at the top of hard angled routes. Very effective on deep developing plays to accelerate after even with DBs and create late separation.

Hands: Has fought the ball on occasion when trying to reach back for throws put on the back hip. Hands are much more effective catching over the shoulder and seeing the ball in with touch than trying to greet the ball on throws into chest.

Contested Catch Ability: Has nice concentration skills and a notable wingspan to illustrate a high catch radius. Has won contested throws with high point skills but needs to be more deliberate working back to the line of scrimmage on out patterns.

RAC Ability: Has some good aggressiveness with the ball in hands to accept head up contact, but lacks that same toughness when taking contact laterally. Burst and straight line speed are best traits to win RAC yardage and create big plays

Football Intelligence: Still a bit of a straight line athlete as compared to a highly efficient route runner. Will win reps due to speed and based on coverage calls but to be a consistent winner will need to be focused on developing varied releases and manipulating DBs.

Vertical Receiving: Is easily best trait. Has good ball tracking skills over the shoulder and has had success with using size and length to bump defenders off of hip while attempting to see in throws down the field. Capable of taking aggressive route to the football on underthrown ball.

COD Skills: Has a fair amount of burst, looks to be a dynamic functional athlete. Has more burst and suddenness on shallow breaks and cuts vs. hard cuts or when forced to shift momentum drastically.

Speed: Straight line speed is excellent. Has good initial get off if granted a clean release and will kick into a second gear if picking up the flight of the football in the air on deep targets. Not the receiver you want left unattended slipping into space or holes in zone coverage.

Competitive Toughness: Needs to find more leverage and increase efficiency at the line of scrimmage against physical press defenders. Has impressive effort as a blocker and shows ability to dictate body positioning on back shoulder throws up the sideline.

Block Ability: Has shown excellent toughness and intent to fill on crack down blocks off the edge. Has better physicality than one would assume and takes good angles to get in between space defenders and the ball carrier. Can be asset as a backside blocker on counters and weak runs.

## FILM ASSESSMENT

Games watched: Iowa State (2015), West Virginia (2017), Texas Christian (2017), Baylor (2017), Texas (2017), Oklahoma (2017)

Route Running: Runs slant, post, back shoulder fade, out route and comebacks with most frequency. Has smooth feet but is not especially crisp at the top of routes to break hard and establish clean separation against tight man coverage.

Hands: Has let a handful of throws get away when transitioning from initial address of the ball to trying to tuck away. Hands are strong and shows comfort and consistency in extending to catch ball away from body. Capable of traffic receptions with defenders draped on frame.

Contested Catch Ability: Terrific ability to outmuscle defenders and hand fight down the sideline for positioning against tight man coverage. Can improve timing of flashing hands to prevent DBs from being tipped off on impending target.

RAC Ability: Big, strong and capable of out-muscling defenders at the catch point as a way of breaking out of the grasp. Free arm is active and frame has ample size to create missed tackles thanks to overall size. Isn't going to outrun many defenders in the secondary.

Football Intelligence: Coming from a high spacing offense, but shows ability to win in tight spaces and in the middle of the field. Would like to see some cleaned up routes in terms of when eyes flip back and making adjustments to defender leverage, will run routes into coverage at times.

Vertical Receiving: Shows effectiveness beating press man coverage and stacking aggressive coverage schemes. Does have enough of an upfield push against off coverage to strain defensive backs. Has a nice ability to track the ball over shoulder and adjust for receptions.

COD Skills: Is not especially fleet of foot but has effective steps at the top of routes to cleanly flip out of stem and into break. Balance is strong and strength allows for absorption of contact. Is not going to juke many defenders in the open field after the catch, however.

Speed: Sneaky burst when pressing clean off the line on vertical routes. Does have more build up speed and is more effective with separation on yards 10-20 than 0-10. Ability to break big plays is predicated on physicality after the catch, not speed.

Competitive Toughness: Impressive ability to impose will both at the line of scrimmage against press coverage and at the catch point when adjusting to the football. Has mentality and effort of a Tight End after the catch, bullies smaller tacklers.

Block Ability: One of the best blocking receivers in the class. Can lock hands on defensive backs on the boundary and will run feet and stay sticky until ball carrier works beyond the block. Patient in space to stalk before releasing at the LOS and takes good angles to greet blocks.

## FILM ASSESSMENT

Games watched: Memphis (2017), South Florida (2017), Auburn (2017), Maryland (2017)

Route Running: Is not notably polished at the top of routes and does not illustrate a great deal of suddenness to break off routes crisply. Is impressive with ability to create late separation with large wingspan. Found lots of production down the field stacking DBs.

Hands: Despite fringe size in hands has made some very nice catches away from the body, illustrating finger strength and concentration skills. That said, when taking contact or while having DBs rip at the ball at the catch point can have an issue with putting the ball way.

Contested Catch Ability: Has wingspan to go up and snatch the football away from defenders. Issues do arise to cleanly put the ball away and will not consistently play the ball with aggression, will fade away from launch platform and let DBs undercut.

RAC Ability: Strength, balance and active free hand are primary winning traits. Has vision and patience to wait out an aggressive charge into the catch area before creating a false step. Isn't going to work way out of tightly congested traffic areas.

Football Intelligence: Requires polish and nuance in a lot of areas of the game. Is a smooth athlete with plus physical traits and good ball skills, but likely will face a more steep transition to the NFL level than his contemporaries in the 2018 Draft.

Vertical Receiving: Has a big time catch radius and shows good skill in tracking the football to adjust pace of the ball and be in a favorable spot to address the football. Does not have great long speed but effective with hand usage to stack corners and get overtop of the defender.

COD Skills: Does not have a lot of twitch or suddenness in lateral situations. Burst out of the catch does not impress either, is a smooth athlete but suddenness and foot speed are not marks of play style.

Speed: Has a modest level of burst and straight line speed, isn't going to take the top off of defenses by running go routes and won't be a consistent big play receiver after the catch. Does not have a lot of short area explosiveness either to close cushion on off coverage.

Competitive Toughness: Doesn't run all routes at the same pace yet, will still roll easy out of some releases and fail to sell a target. Secondary effort on extended plays is a plus, will bump defenders and work into open space to provide a target.

Block Ability: Great length and combativeness with hands to attack defensive backs and establish a grip. Play strength is enough on the boundary to consistently anchor and prevent DBs from pushing through blocks and arriving at the LOS to challenge the ball.

## FILM ASSESSMENT

Games watched: Kentucky (2017), Tennessee (2017), Florida State (2017), Charlotte (2017)

Route Running: Takes advantage of a lot of clean releases off of the LOS. Physical to play through contact at the top of the route to create consistent separation. Hasn't run a multitude of routes and pretty consistently is aligned to the left side of the formation, will need to work on multiplicity.

Hands: May have the best hands in the class. Consistently plucks the ball out of the air, flashing hands late and is comfortable to utilize full range of catch radius to see the ball in. Not bothered by contested situations and track the ball very well to get surface area of hands on the ball.

Contested Catch Ability: Awesome receiver in contested role. Has size and will consistently box out defenders, forcing them to try to go through the body and extend to defeat length catch radius. Concentration and hand strength all combine for a potent mix.

RAC Ability: Has terrific body control, ability to adjust body and step out of potential tackles. Has great balance and strength to play "bully ball" in the secondary and impose will on smaller receivers. Has good field vision to break into open space.

Football Intelligence: Has been afforded some watered down looks coming out of college offense. Will likely face a transition window against more diverse coverages and when tasked with running a higher multitude of route concepts. Very strong body control in space, however.

Vertical Receiving: Showcases ability to get overtop of DBs and can separate down the field thanks to a second gear. Doesn't have great initial acceleration but does have needed size and catch radius to take the ball off the top of DBs helmets.

COD Skills: Is more power than quickness, doesn't have a lot of shiftiness or spring in cuts to be able to quickly vacate against a patient press defender. Has fair level of gear down quickness on hard route breaks to sink and flip eyes back to the LOS.

Speed: Doesn't have burner's speed and isn't going to win reps simply by running past people. Does have a second gear to kick in once tracking the ball in the air or after the catch but is by no means a speed threat.

Competitive Toughness: Physically imposing as a receiver, but overall has mixed results due to uninterested reps as a blocker, missed some opportunities to spring teammates down the field with an extra block. Very difficult to bring down after the catch and disrupt at the catch point.

Block Ability: Has all the potential in the world as a blocker thanks to thick, long frame. Effort needs to be improved to stay engaged in plays where he isn't a receiver and create a higher profile in the run game.

## FILM ASSESSMENT

Games watched: Texas Christian (2017), Oklahoma (2017), Oklahoma State (2017)

Route Running: Has nifty usage of quick feet and head fakes at the LOS to beat press coverage. Carries speed through the top of route fakes very well and is developed as a big play threat on the outside. Has capacity to add quick game packages to skill set.

Hands: Does have some lapses trying to catch cleanly with the hands, will double clutch some attempts. More confident catching the ball over the shoulder for bread basket receptions as compared to squaring up the football in traffic and seeing the throw in.

Contested Catch Ability: Not frequently tested with bodies hanging on body. Has a promising frame, bigger size than play style would initially have one anticipate. That said, is a big question mark of game but hand usage in tight areas will be a barrier to overcome.

RAC Ability: Has promising ability to make defenders miss in one on one situations courtesy of agility and short area quickness. Experience in the return game will be helpful for finding way through congested areas and picking way into open space.

Football Intelligence: Has currently a one dimensional role but offers upward mobility to be a more diverse and every down receiver. Spatial awareness as it relates to the football and tracking the ball in routes is effective, rarely makes life harder than it needs to be.

Vertical Receiving: Primarily a big play down the field threat coming out of a run first offense. Averaged over 24 yards per catch in 2017 and often times was able to capitalize on play action to out-leverage Safeties after stacking CBs.

COD Skills: Very nimble footed and illustrates impressive quickness to jitterbug in and out of potential cuts. Has good burst out of a cut to quickly accelerate and burst into open spaces and break pursuit.

Speed: Has good but not great long speed. Is more quick and twitchy in short spaces as compared to a long burner down the field. Does well to sustain acceleration and top speed when pivoting or cutting in space as a route runner.

Competitive Toughness: Usage has developed good habits to stay engaged in plays at all times. Is not going to be caught taking plays off and brings a good attitude to working on the boundary without a lot of targets. Useful as a blocker.

Block Ability: Scrappy guy, plays with good effort and motor. Is not going to wow with length but movement skills and effort are notable plus traits that will allow for effective framing of cornerbacks on the edge.

Hands: Is a clean hands catch, consistently pulled in targets thrown in general vicinity as catchable footballs. Not afraid to extend and expose body while going up to challenge the football, even in space, offering good concentration to reward passers.

Contested Catch Ability: Doesn't have great size but has willingness to extend high or extend towards the LOS to greet the football. Isn't going to be a player that boxes out defenders on hangs on through heavy hits. Does show good concentration.

RAC Ability: Isn't overly explosive but does have smooth COD skills after the catch to peel off trajectory and break first arriving tackle if sitting down against zone coverage. Has some nice functional strength as well to take arm tackles well and play through contact.

Football Intelligence: Savvy route runner, impressive ability to dart off stem. Has good understanding of finding soft spots as a receiver and making self available for his quarterback, will square into the LOS and flow, looking for space.

Route Running: Quick jitterbug type route runner, shows off great short area agilities in the middle of the field to break off of route stems and uncover for open targets. Good urgency at the LOS to slip away from contact and win early on in routes.

- in rotes

Vertical Receiving: Does not have the needed long speed to effectively stack defensive backs on the boundary, as such will see a lot of reps from inside, but can run slot-fade and get away from man coverage. Does very well to adjust to the football with torso and hands.

COD Skills: Nice short area quickness and effective economy of movement, doesn't waste steps and understands abilities to break off routes quickly. Can slide laterally but isn't overly explosive in said situations.

Speed: Long speed is only modest. Has enough get off to pull away and break some angles after the catch but will be caught over long distances from some member of the secondary if left out in foot race. Capable of carrying speed through breaks effectively.

Competitive Toughness: Tough, fearless mentality to play in the teeth of the defense. Can take a stick and pop back up without missing a play. Has nice concentration to not get frazzled by defenders shooting into catch area.

Block Ability: Tough, hard nosed interior receiver with admirable size for the slot, can feasibly lock horns with Safeties and Nickel DBs and provide enough of a hold to allow ball carriers to climb up to the second level.

Receiver
(+0.05)

WR Trey Quinn is a favorable projection to play in a slot role in the NFL. Quinn has the frequency of 3 WR sets. Look for Quinn to play inside and niche receiver.

## FILM ASSESSMENT

## Games watched: West Virginia (2016), Auburn (2017), Tennessee (2017), Kentucky (2017), Texas (2017)

Route Running: Primarily a vertical receiver. Has lapses getting off of contact and to landmarks on crossers and will have to adjust trajectory late. Footwork at the top of hard breaking patterns needs to be cleaned up for more consistency collecting frame and gearing down to separate.

Hands: Has some lapses of receiving the ball away from the body, will not consistently haul in targets when tested with throws away from the frame of the body. Has a predisposition to trap the ball on body if square to the line of scrimmage.

Contested Catch Ability: Does not play off of contact particularly well, functional strength is not present to shrug off defenders and elevate without having defenders negate some of athletic ability. Irregular hand usage further exacerbates issues.

RAC Ability: Physical. Aggressive with the free hand. Sudden and able to create false steps and break pursuit angles with a hard cut. Dynamic receiver with ability to take a short throw and break off a large chunk gain on any given rep.

Football Intelligence: Limited tree and too prone to allowing defenders to move off of spot and give up leverage on some routes. Is very good at strengths, very limited at weaknesses, so will need development to be a more consistent receiver and reach ceiling.

Vertical Receiving: Has ability to simply breeze by defenders in off coverage. Has terrific vertical skills and ability to read the football in the air. Shows quick twitch and acceleration to quickly close down cushion. Shows good suddenness on post and corner breaks to separate.

COD Skills: Very sudden. Shows great foot quickness and looseness through the body to generate lateral momentum into a cut while still carrying speed. Great ability to cut back against the grain and force a missed tackle attempt in space.

Speed: Top notch speed, is a true burner in both short spaces and when given the chance to fly down the field. Will catch zone coverage by surprise if Safety is not aligned shaded into the boundary to his side, has busted Cover 2 wide open in the honey hole more than once.

Competitive Toughness: Frustrating in some instances because aggressiveness and physicality of RAC reps doesn't translate to blocking and contested situations. Would like to see more application of that mentality to all areas of the game.

Block Ability: Shows good intent and effort but is too prone to relying on upper body strength to hold a block, will get folded at the waist and lose leverage before collapsing back into the LOS by cornerbacks on the boundary.

## FILM ASSESSMENT

Games watched: Arizona (2017), San Jose State (2017), West Virginia (2017), UCLA (2017), Brigham Young (2017)

Route Running: More smooth than explosive, but has effective feet at the top of routes to sit down quickly on curl routes. Effective creating inside release and breaking deeper routes off to run into space. Doesn't work frequently between the hashes.

Hands: Has needed ability and comfort to catch football away from body. Shows good concentration to see the ball into hands and not allow defenders to break through the thumbs and dislodge the football. Has a prominent catch radius.

Contested Catch Ability: Ability to adjust body frame and greet the football at extreme angles allows for some spectacular catches. Has needed length to out-jump defenders and enough toughness to hang in and not let defenders wipe out leverage at the catch point.

RAC Ability: Slippery on account of size and balance, but not necessarily fluidity or twitchiness. Will shrug off contact and do well to work eyes up the field and churn the legs to help make the most of receptions.

Football Intelligence: Surprised many with high impact season in 2017 after a summer transfer just before season started. Shows nice polish on routes and an awareness of soft areas up the sideline against zone coverage to provide an easy target for passer.

Vertical Receiving: Lacks true burner speed but has good acceleration and does show ability to stack defenders, even in off coverage. Would like to see earlier adjustments to the flight of the football to put in optimal position to register long receptions.

COD Skills: Doesn't have a lot of short area quickness on account of long strides but does have good balance and ability to drop the hips and decelerate with quickness. Does not showcase a great ability to create missed tackles with foot speed after the catch.

Speed: Long speed is quality but will require steps to get up to top speed, does not have suddenness releasing off of the LOS to quickly stack defenders in press coverage or run away from defenders and break angles in the secondary.

Competitive Toughness: Is not overly physical as a blocker or at the line of scrimmage; can get bumped off of set and will struggle to use size or length to dictate separation on route stems. Pesky and aggressive addressing the football, however.

Block Ability: Will not be an asset at current time. Fails to strike with confidence and pop in the hands to establish initial control. Needs to liven up the feet and work hard to stay framed on defenders on the boundary to keep alley clean for RB.

## FILM ASSESSMENT

## Games watched: Ohio State (2015), Maryland (2015), Ohio State (2017), Wisconsin (2017), Maryland (2017), Pennsylvania State (2017)

Route Running: Extent of route tree is somewhat limited but has shown success in vertical routes, comeback patterns and in breaking routes. Understands how to use length at the top of route stems to establish separation. Likable quickness on shallow breaks.

Hands: Terrific concentration and shows softness in hands to be able to cleanly receive the ball in contested situations. Hand size is strong to reach and pluck the ball, capable of doing so with one hand in full speed reps. Strength in hands to squeeze and establish control quickly.

Contested Catch Ability: Surreal ability to posterize defenders and get vertical at the catch point. Unbothered by defenders hanging on body or trying to rip at hands as a receiver. Will flash late and has great short area reaction skills to mirror the ball and get mitts on a throw.

RAC Ability: Has some nifty moves after the catch. Illustrates a powerful free hand, good peripheral vision to find space and the needed second gear to break away from soft challenges after the catch. Good balance to cut and tilt away from low tackle challenges.

Football Intelligence: Will need development from a route perspective. Could be handcuffed early in career but persistence can be rewarded with tremendous upside and high ceiling. Must carry speed through routes better and add more nuance to stems/routes to tree.

Vertical Receiving: Has a strong vertical presence due to length and catch radius. Can be problematic trying to cover in man to man due to size and ability to nudge and create tiny levels of separation to separate when pressing down the field.

COD Skills: Quickness is predicated on degrees of the cut. If tasked with a lateral juke or a shallow break out of a vertical route stem is plenty quick. Harder breaking routes require additional time to gear down and snap out of momentum.

Speed: Has more buildup speed than initial explosion but secondary acceleration is enough to separate from corners late to flip hips in man to man coverage. Has pleasant level of burst in the open field to make coverage busts pay for mistakes.

Competitive Toughness: Is a bully down the field. Will hand check defenders early on when playing in phase defenders. Has a my ball mentality and shows great aggression to attack the football. Looks to optimize catches and cut back into the middle of the field.

Block Ability: Needs to be better with initial stalk of opponents. Too frequently is lackadaisical in efforts to frame a block early, allowing defenders to shoot across face and get into ball carrier. Has a terrific frame for effectively walling off secondary defenders.

## FILM ASSESSMENT

Games watched: Louisiana Tech (2016), Western Kentucky (2016), Vanderbilt (2017), Syracuse (2017), Marshall (2017)

Route Running: Doesn't take stems with a lot of deliberate spacing when running routes down the field. Needs to be more aware of zone windows to sit down and provide passer with an easy target. Schemed a lot of easy looks as a volume receiver at MTSU.

Hands: Has been guilty of a number of drops, seemingly an issues over the middle of the field, will be quick to flip the eyes up the field instead of seeing ball into the body. Hand size will be problematic for catching consistently away from the body.

Contested Catch Ability: Will not be a regular contributor in this area. Lacks length, size, strength and ability to catch cleanly with the hands in order to win against defenders in tight coverage. Needs to be targeted with separation to offer regular results.

RAC Ability: Has a fair level of vision and ability to create yardage in shallow spaces. Effective screen receiver to quickly flip up the field and break initial pursuit angles before showing wiggle in the open field to bust off a chunk gain.

Football Intelligence: Is fairly raw. Guilty of false steps at the line of scrimmage. Struggles against press coverage and leveraged routes to consistently uncover and establish separation. Vision and ability to feel pursuit is a notable strength.

Vertical Receiving: Size, length and physicality all pose problems for separating from defenders on deep targets. Has to have ball put on the money in order to capitalize on targets. Has good initial burst off the line for free releases into the secondary.

COD Skills: Very agile and quick in tight spaces. Has good foot speed to step frequently and adjust trajectory on the move. Capable of some impressive stop/start ability in the open field with the football to force missed tackle opportunities.

Speed: Good quickness initially out of stance when not taking false steps to release up the field. Has good pace to break pursuit angles up the sideline when able to get into some green space.

Competitive Toughness: Tough, scrappy kid with competitiveness to play well above weight class. Has ability to influence the game with some manufactured touches thanks to ability with the ball in hands.

Block Ability: Is not going to offer any value as a blocker. Small, undersized slot player who will resort to cuts on the edge to help chop down 2 nd level defenders, but is not a sustainable model for blocking at the NFL level against bigger, stronger defenders.

## FILM ASSESSMENT

Games watched: New Mexico (2017), Washington State (2017), Virginia (2017), Oregon (2017)

Route Running: Has good quickness getting out of stance and has fluid route stems. Uses head movements to sell shorter routes while pressing up the field. Routes are primarily deep targets but has been used in screen game and in shallow crossers.

Hands: Has double caught some over the shoulders, would like to see a cleaner fit with initial address of the football. More comfortable as a body catcher when square to the ball and seeing the ball directly into the numbers.

Contested Catch Ability: Does not do well with contact. Has a good wingspan and leaping ability but inability to shake contact and handsy defenders will negate body positioning or attempts to catch the ball. Plays higher above the rim than measured size if able to adjust in space.

RAC Ability: Has good vision, illustrates ability to pick through an initial wave of pursuit in the screen game to escape the flats and get up the field. Long speed won't regularly break pursuit angles in the secondary and doesn't shrug off contact or arm tackles.

Football Intelligence: Has the mentality of a much smaller receiver. Needs to adjust play style some to add more of a size element. That said, has good open field instincts and has a likable habits on route stems to attempt to set up defensive backs.

Vertical Receiving: Has better initial quickness than actual long speed, but dynamics on stems set up defensive backs for a false step or errors in drops. Has great length and is comfortable tracking the ball over the shoulder, allowing margin for error over top if DB is stacked.

COD Skills: Has a good level of short area quickness, feet are fluid and allow for hard breaks and change of direction. That said, step area requires a bit of space so tight fits with high traffic can cause the feet to slow and be more deliberate to pick way out of opposition.

Speed: Has only modest straight line speed, has good ability to stack press coverage in space and separate within the first 10 yards but will not continue to pull away from defensive backs in the deeper portions of the field.

Competitive Toughness: Has to get stronger physically. Can get walled off of routes and totally eliminated down the field by stronger, aggressive cornerbacks on the boundary. Goes down easily on contact and needs to be more effective with hands at the top of stems to finish separation.

Block Ability: Has an effective frame to be a viable blocker on the boundary but functional strength is something of a work in progress. Needs to develop body in order to reach capacity in this area.

10'01"

- Three Cone Shuttle: $\quad N / A$ WR Combine Avg. (03-16): N/A - Short Shuttle: $\quad N / A$ WR Combine Avg. (03-16):

Hands: Body catch. Will needlessly trap screens and in breaking routes into body. Fights the ball away from frame and will have a hard time getting hands around the nose of the throw. Will give up contested catch situations by not extending for the ball.

Contested Catch Ability: Has a dynamic skill set, is a plus athlete with the ability to leap and catch throws if placed high over top of head. Is not especially physical at the catch point and ineffective wingspan to maximize catch radius will hurt conversion percentage.

RAC Ability: Vision can be problematic, often times does not see defensive pursuit closing in and will over-extend plays trying to create big space. Athletic skill set is dynamic and able to create a big play with balance, quickness, long speed and more.

Football Intelligence: Has a fair level of polish as a route runner. Understands how to lead a defensive back into a break and makes efforts to work into needed body positioning. Isn't a player to do a lot of the little things right: hands catches, blocking role, RAC instincts, etc.
$\square$

Route Running: Smooth and sudden at the line of scrimmage. Has crisp breaks off of shallow route angles. Capable of getting on top of defensive backs in off coverage with quickness and forcing hard commitment up the field. Has most success on deep developing patterns.

He

Vertical Receiving: Has the needed long speed to separate while tracking the ball in the air. Picks up ball in flight well and is effective in running underneath the ball before transitioning into catch.

COD Skills: Sudden. Jitterbug type athlete in short spaces. Shifty cuts allow for a quick juke in the open field. Has effective lateral cuts to plant and vacate the area as a ball carrier. Carries speed well through tops of route stems and can snap out of high speed.

Speed: Has ample speed to burn. Quick acceleration skills of the line of scrimmage to get up to top gear and close cushion against off coverage. Has the ability to turn on the jets and run away from defensive backs after the catch as well.

Competitive Toughness: Initial effort is often not followed by ability to finish the play. Can be applied to second effort routes, as a blocker and more. Will contribute (and arguably most valuable) as a special teams player in the return units.

Block Ability: Is not a physically notable presence on the boundary. Will take an aggressive charge and first punch but lacks the hand power and the oomph to back up initial effort with sustained blocks.

## FILM ASSESSMENT

Games watched: Stanford (2017), Texas (2017), Ohio State (2017), Arizona (2017)

Route Running: Carries delayed route stems deliberately and has effective ability to accelerate late out of breaks in order to establish separation. Has full tree at disposal. Does not have needed ability to press through contact at the line of scrimmage.

Hands: Guilty of some frustrating drops and poor ball security at the catch point. Concentration drops are a problem after dropping the eyes at the catch point. Has issues with cleanly receiving the ball away from the body as well.

Contested Catch Ability: Has very little length, poor play strength and does not have ability to jostle for positioning without being removed from desired space. Catch radius is limited and failure to cleanly receive the football handcuff catching away from the body.

RAC Ability: Shows good creativity after the catch but frame is not lent well to absorbing contact and protecting the football. Has a quick accelerator to get out into space and has lateral quickness and wiggle to create a false step.

Football Intelligence: Crafty receiver with an eye for adjusting routes with sight and work into soft spaces. Has deliberate route stems with fakes and quickness to create separation. Good field awareness as it relates to the sticks.

Vertical Receiving: Doesn't have great long speed but acceleration out of stance is good and knows how to change speed to create separation. Effective mostly against zone coverage when fading across the MOF and uncovering.

COD Skills: Has quick, jitterbug skills to dance in and out of spaces and separate on routes. Has good ability to break an initial tackle challenge. Feet are sudden and is able to collect and redirect. Has good ability to contort body and shift to avoid a tackle attempt.

Speed: Has better play speed than timed speed. Has good acceleration to create space but is not a true burner with explosive vertical speed. Will still run away from defenders if able to create separation prior at the catch point.

Competitive Toughness: Physicality is limited. Struggles with contact and fighting through active hands by defenders. Runs hard, shows intent to fight for additional yardage. Will allow flashing defenders to influence sight lines and attract the football.

Block Ability: Trojans actively took him off the field on obvious running downs. Will not offer value on running downs or screen passes at all. Non-physical, poor length and is lazy and haphazard with challenges trying to cut down low.

## FILM ASSESSMENT

Route Running: Quick at the top of breaks, particularly on shallow angled routes. Is not going to have success beating patient, physical CBs in press coverage, offensive system has masked from press reps and having to fight off of contact to get out into secondary.

Hands: High volume receiver who showed little issue with catching ball, even when challenged with a receiver on the hip pocket. Has a limited wingspan, however, so some throws may not reach the hands if not placed well.

Contested Catch Ability: Not a physical receiver. Shows good concentration and will see the ball into the hands if given space to do so but is not going to successfully jostle for positioning nor box out defenders collisioning the body as the ball arrives.

RAC Ability: Handful to box in, understands the value of spinning and twisting out of contact and diminishing surface area in contact to slip off. Shows nice balance when taking contact to keep footing. Very shifty receiver in small spaces to pinball into a missed tackle.

Football Intelligence: Comes from a wide open spread that has not yielded a lot of translatable coverage looks. Natural instinct in the open field as a runner is a plus, as is experience as a special teams return player.

Vertical Receiving: Quick to get up the field and shows good understanding of how to adjust release pre-emptively to avoid zone defenders off the ball. Tracks the ball well into body. Does not have a notable amount of length to high point or attack poorly thrown balls.

COD Skills: Very sudden in tight spaces. Impressive ability to sink hips low and get weight to come to a stop in the open field. Some inefficiencies as a route runner limit burst out of hard breaks back to the LOS.

Speed: Good open field speed, will run away from defenders in the secondary and break pursuit angles if given the ball quickly on the boundary. Big play receiver when not redirected and allowed to run free through the secondary.

Competitive Toughness: Game is centered around not having to deal with contact. Defenses dedicates to playing up in face and dictating coverage early will negate a lot of routes and throw off the timing with Quarterback. Is not a valued blocker or presence on the 2nd level.

Block Ability: Lacks size, strength, length and experience as a blocker. Will have a hard time effectively deterring flow in the secondary and as a result is handcuffed with usage in full time personnel groups.

## FILM ASSESSMENT

Games watched: Pittsburgh (2016), Florida State (2016), Stanford (2016), Louisville (2017), Duke (2017)

Route Running: Smooth coming out of breaks, regardless of angle. Shows good, quick need and an understanding of how to carry momentum through route breaks. Effective on sharp angles to snap head around and create separation.

Hands: Can get deterred by defenders flashing in front of face or contacting body at the catch point, fails to have steady hands to see in throws in such situations. When uncontested shows soft hands to greet the football away from body.

Contested Catch Ability: Lacks needed size, strength, hand/eye coordination and length to be a consistent winner at the catch point. Lets too many targets get derailed by contact as the ball arrives.

RAC Ability: Is smart to get upfield and make the most of any afforded space. Will make defensive lapses pay but is more of a straight line runner than a creative RAC weapon. Athletic ability limits upside in this area as well.

Football Intelligence: Very clearly a student of the game thanks to family lineage (father Ricky played 17 years in the NFL). Crafty route runner to set up defenders in space and had good timing with QB Mitchell Trubisky before
abbreviated final season.

Vertical Receiving: Does not have the long speed to be a true vertical threat, fails to step on the toes of defenders and force an early commitment when pressing up the field. Does not have the catch radius to elevate or adjust to poorly thrown balls down field and negate length.

COD Skills: Is much more effective pressing up the field and snapping off routes as compared to trying to create missed tackles or extra yards after the catch. Does not have explosive traits but rather quick/active feet in order to dart out of a space.

Speed: Underwhelming in any area other than when given a free release off the line of scrimmage and rolling through uncontested route breaks. Is more quick than fast and does not appear to have a needed second gear to kick in when uncovering with the ball.

Competitive Toughness: Plays fearless getting off the line and working into the secondary, but fails to carry over mental toughness into physical application. Can get bullied at the catch point. Does not have a lot of strength to run through poor tackle attempts.

Block Ability: Lacks size and strength to be truly effective in this area. Issues are not an indication of effort level, will bust tail trying to wall off defense. As a result, will have some success but sustainability of challenging defenders on the second level will be hit or miss.

WR Combine Avg. (03-16): N/A

- Short Shuttle:
4.57 WR Combine Avg. (03-16): $\quad N / A$

Games watched: Texas Christian (2016), Virginia Tech (2017), Kansas (2017), Baylor (2017), Oklahoma State (2017)

Route Running: Featured as a boundary receiver to the right in offense, is only acclimated to facing certain releases based on alignment. Struggles with more physical receivers in press, taking too long to release off line. Has a good set of feet to gear down and break sharply on routes.

Hands: Guilty of far too many drops. Has had a blend of concentration drops and misses at the catch point by allowing defenders to break focus. Will follow up a drop with a spectacular catch with a good adjustment. Will be up and down.

Contested Catch Ability: When able to cleanly put hands on the football will make some excellent catches and shows ability to high point the football effectively on vertical plays to prevent contested targets. Needs to gauge when to transition into a defender with more consistency.

RAC Ability: Doesn't have a lot of wiggle to generate forced missed tackles. Has a moderate level of balance and strength to run through late contact in the open field. Second gear is enough to create some distance after securing the catch.

Football Intelligence: Appears to be the beneficiary of some easily crafted releases and looks due to offensive system; is taxed when put in true press and isolation without having counters to create separation. Will require transition window due to scheme changes.

Vertical Receiving: Has made some big plays working up the sideline; having most success against off coverage to quickly close down cushion and force and early commitment from DBs. Has effective tracking skills when looking over the shoulder.

COD Skills: Looks to have most suddenness on slants and posts, where sharp head snap enables ability to get across face of defenders breaking inside. Lateral quickness and agility at the line of scrimmage is not a notable strength.

Speed: Has the acceleration to pressure off coverage and has enough long speed to separate on deep nine routes down the field and/or separate after the catch. Play speed on route stems is strong, does well to climb off the LOS with pace before getting into breaks.

Competitive Toughness: Effort and release can be variable, given reads and play design. Needs to play with more intent to receive targets on any given play. Shows good intention to gain extra yardage after the catch as a receiver.

Block Ability: Has a good intent but isn't able to keep blocks consistently. Can be guilty to stopping the feet and allowing defensive backs to work across face and into pathway of the football.

## FILM ASSESSMENT

Games watched: Pennsylvania State (2016), Miami FL (2016), Oklahoma State (2017), Miami FL (2017)

Route Running: Has not been utilized as a route runner with consistency. Limited targets and reps out of the slot to get into soft spaces or run crossing routes in the shallows for cheap RAC yardage. Will be required to build from the ground up as a route runner.

Hands: Hands are adequate to receive the football cleanly on clean targets. Capable of addressing the ball cleanly from either stationary targets or while seeing the ball in on the move.

Contested Catch Ability: Should not be relied upon to be a receiver in traffic. Capable as a screen receiver to hold water and allow defenders to vacate and replace behind the initial wave at the LOS but does not have the frame or strength to play well with defenders on body.

RAC Ability: Is "quicker than a hiccup". Will run circles around first man down on coverage units and consistently shows great field vision to set up approaching defenders and establish room to work preemptively.

Football Intelligence: Ineffective route runner due to inexperience and exposure. Is used to finding manufactured touches on offense as a motion player. Has very good read on the field as a returner and the gift of anticipation in the open field.

Vertical Receiving: Has all of the speed in the world needed to effectively push past nickel defenders in the vertical game. Needs to add nuance and not be content to run straight lines as a means of manipulating defensive coverage and opening throwing windows.

COD Skills: Is a jitterbug in tight spaces. Has good spring off of steps and visible acceleration out of a cut to break away and create space. Has slipped tight quarters before with sudden feet, good balance and short area agility to create a crease.

Speed: Is a game breaker with the ball in the open field. Has a second gear and immediate acceleration skills to get up to top speed and put defenders in the dust behind him. Has a good deal of quickness and pace through pivots and cornering as well to always play fast.

Competitive Toughness: Key contributor on specific play packages but true value is in the return game. Fearless open field runner and calm under the football to see into hands before looking for room to run. Is not a player to run through contact as a route runner.

Block Ability: Small, lean frame and doesn't illustrate a lot of desirable lower body power. Often used as a dummy to preoccupy defenders in run game as a false motion defender and suck pursuit away from pathways of the football.

- Three Cone Shuttle: $\quad N / A$ WR Combine Avg. (03-16): N/A
- Short Shuttle: N/A WR Combine Avg. (03-16):

Hands: Hands are sticky and do well to greet the football away from body. Is not a player content to let ball get into frame, which protects contested catches and allows for some difficult receptions. Late body adjustments to the ball do well to get hands in proper positioning on time.

Contested Catch Ability: Concentration and hands are plus traits, but struggles with ability to get separation or sustain positioning if contacted from the side when trying to see in the ball. Size is a natural restriction, one that prevents upside or growth.

RAC Ability: Vision will allow a good pathway to get out of catch and into role as a runner. Has done well to optimize bubble throws to make first arriving defender miss before turning up field and making the most of additional available yardage.

Football Intelligence: Has made some silly mistakes as a senior, still green to a starting role as a receiver and needs to be more self aware of hand fighting and placement of free arm when trying to fight off tackles.

Vertical Receiving: Can get behind slot defenders when tasked with running corner routes or attacking Cover 2 zone; but pure straight line speed is not a strength and is lacking in the length to separate and/or use length to create space at the catch point.

COD Skills: Doesn't showcase explosive cuts but short strides and step frequency do allow for quick darts off of stem and ability to cut back across the grain against pursuit with consistency.

Speed: More quick than fast. Second gear is pedestrian at best but initial acceleration is strong to get off the line of scrimmage and pressure off coverage. Doesn't have breakaway speed and shouldn't be considered a huge RAC threat in the open field.

Competitive Toughness: Gritty receiver unafraid to extend body and put self in precarious positions when addressing the football. Doesn't have any apprehension looking into the middle of the field and trying to provide a sit down target in linebacker territory.

Block Ability: Tenacity and effort only take help so much; simply lacks length, size and strength to be able to prevent defensive backs from pushing back the block and preventing ball carriers from getting a soft corner on boundary runs.

## FILM ASSESSMENT

Games watched: TCU (2016), South Dakota State (2016), Villanova (2016), Western Illinois (2017), Northern Illinois (2017), Youngstown State (2017)

Route Running: Has done well to add extra bumping of defenders off of hip throughout two seasons as breakout star. Gears up well on vertical stems and crafty to attack DBs in off coverage before breaking off. Needs to clean up speed and feet at top of routes to uncover with snap.

Hands: Has some of the best hands of any skill player to pass through the draft in recent years. Tremendous ability to pluck the ball out of the air and has softness to corral throws with consistency. Utilizes huge catch radius with either one or two hands, depending on ball location.

Versatility: Is a headache to account for: has been used flexed in the redzone, put in the slot, playing from inline and as a move piece in the backfield. Capable of filling multiple roles in an effort to get routes isolated as a mismatch weapon.

Contested Catch Ability: Wins with terrific, strong hands and a big time leaping ability. Has filled out frame admirably and plays fearless when contacted as a receiver. Background as a basketball player serves well as a "low post" receiver to shield the ball with body.

RAC Ability: Has good long speed to make defenses pay if unaccounted for or if able to split the safeties up the middle of the field. Has good open field vision. Active with free arm to stave off contact and keep body clean in an effort to spring past the first tackler.

Power at POA: Has the functional strength to effectively wash and wall off defenders on the edge; but feet betray ability to create leg drive. Has the size required to grow into a more effective inline role but immediate playing time is better served in space in this regard.

Competitive Toughness: Physically dominant on the FCS level. Runs through tacklers in the secondary. Will bully defenders at the catch point and overwhelm with a rare combination of size, strength, flexibility and explosiveness.

Flexibility: Ability to length body and contort hands to high point throws is impressive, rarely impeded by pads. Would like to see a greater awareness of sinking hips at the top of routes to decelerate on hard breaks with more quickness. Has loose core to turn back and receive the ball.

Balance: Issues arise as a blocker when attempting to drive defenders off the line of scrimmage. Feet will narrow and spin or slip off of blocks as a result. Shows nice body control in the short areas of the field to change trajectory and continue up the field.

Football Intelligence: Is guilty of playing a little too loose with the football at times when trying to slip contact, needs to put the ball away. Has savvy routes attacking off coverage and illustrates excellent reaction time and ball tracking skills.

## FILM ASSESSMENT

Games watched: Ohio State (2017), UTEP (2017), Texas (2017), Oklahoma State (2017), Georgia (2017)

Route Running: Has good spatial awareness to understand how and when to adjust into soft spots in the middle of the field. Has active route stems to keep defenders honest to fake a break into the MOF. Carries pacing well on quick break style routes.

Hands: Has the occasional drop, often times appearing to be the byproduct of flipping eyes up the field prematurely. Has been responsible for some terrific catches at the tips of catch radius, has hands needed to be a reliable safety net for QB.

Versatility: Upside is certainly present as an in-line player, possesses the needed frame and strength to be a fixture as a traditional TE. Big slot role is best current fit, proves to have value as a second level blocker and a receiver in the short areas and up the seam.

Contested Catch Ability: Knows how to use big body to shield defenders and jostle for positioning while tracking the ball in air. Has done well to create space at the catch point with size and has little issue using length to high point throws.

RAC Ability: Has modest straight line speed, enough to break intermediate plays down the field if left unattended or able to slip a tackle at the catch point. Very active with the free arm and is consistent in making the first arriving defender miss.

Power at POA: Effective, although not tested from an in-line role with much frequency. Instead is often flexed into the slot and tasked with playing against second level defenders. Shows needed strength to hold firm against some box defenders, however.

Competitive Toughness: Will routinely flip up the field in an effort to get out in front of runs or short passes and be a supplemental blocker. Plays fearless in high traffic target situations, willing to extend and reach for the football even when hits are imminent.

Flexibility: Has modest mobility through the hips, is more noticeable in tight spaces. Good ball skills are supplemented by free shoulders to reach high and extend for the football. Has good torso mobility to give a potent hand swipe and slip away from small contact.

Balance: Terrific in open field situations, carries frame well and is smooth working through route breaks to carry speed. After the catch shows good slipperiness to stay on feet while stop/starting his way through traffic as a means of breaking pursuit angles.

Football Intelligence: Savvy player in space. Has feel for uncovering in key game situations as well, clutch receiver with big plays. Understands angles and how to make the most of RAC opportunities.

## FILM ASSESSMENT

Games watched: Texas A\&M (2016), Georgia (2016), South Florida (2016), Missouri (2017), Arkansas (2017), Georgia (2017), Florida (2017)

Route Running: Has a good sense of tempering route speed to allow zone coverages to suck away from desired area by route combinations. Shows confident cuts at the top of route stems. Will snap head out of breaks to allow for timing pattern success. Effective down the field.

Hands: Terrific concentration and hand-eye coordination to adjust to the football. Hands are soft to cleanly haul in passes but also strong to make the ball stick when contested or jarred at the catch point. Has made a high frequency of one handed receptions in space on inaccurate throws.

Versatility: Has been serviceable as an in-line player but value will be tempered, at least initially, at the NFL level. Has mobility to play as a receiving threat right away and has the size to be effective both in the red zone and in the MOF.

Contested Catch Ability: Catch radius is massive. Former baseball player works like a power forward to box out defenders. Is subtle with hand fighting to jostle for position while reading the ball up in the air.

RAC Ability: Can be an overwhelming presence in the secondary. Will drag defenders trying to jump on back from behind. Nasty stiff arm and not afraid to put facemask in the chest of tacklers squaring up in the secondary. Has a nice second gear to break angles from LBs on short receptions.

Power at POA: Has done well to develop blocking abilities and deliver blow to defenders at the LOS. Has functional strength required to win reps but is not overwhelming and doesn't showcase lower body power to uproot in short yardage situations.

Competitive Toughness: Would like to see a greater intent to follow up if missing initial assignment. Plays with urgency initially at the snap and will win some reps as a blocker simply by quickly getting off the line. RAC monster with a bully mentality.

Flexibility: Body control is spectacular, especially when high pointing the football. Utilizes every inch of frame to extend for the football. Shows good hip drop both in space as a route runner to gear down and as a blocker to stay over feet and not get thrown forward onto toes.

Balance: Can get re-routed if working out of stance across the middle of the field by LBs squatting in zone. Foot activity and natural base are strong to stay upright on feet. Can get overwhelmed and collapsed as a blocker in both run and pass protection by defensive linemen.

Football Intelligence: Still in development as a player after two years of minor league baseball. Has made terrific strides to be more effective as a base blocker since 2016. Will still have lapses in protection assignments or miss a shooting gap defenders as a blocker. Receiving IQ is high.

## FILM ASSESSMENT

Games watched: Boston College (2015), Louisville (2016), South Carolina (2017), Florida State (2017), Clemson (2017)

Route Running: Gifted route runner courtesy of fine footwork and football intelligence. Natural receiver and has a knack for making subtle adjustments to find needed extra space on the hoof. Quick to snap head around and establish space on hard angled routes.

Hands: Has little effort to see the ball into hands; even on difficult reception opportunities. Has often come through with ball throw behind or away from body; squeezing effectively while going to the ground to sustain possession through the end of the play.

Versatility: Is a player worth being moved all over the football field. Can work from the backfield as a receiver or blocker. Effective releasing into secondary from the slot. Has skills to create yardage after the catch with quickness or strength.

Contested Catch Ability: Isn't especially long and at times will have to fight through contact to get hands on the football. But hand eye coordination, concentration and body mobility do allow for wins as defenders greet the ball at catch point.

RAC Ability: Effective in multiple ways but is without a trump card in any one particular area. Has ability to break tackles with balance, kick into high hear, or put head down, depending on game situation. Most importantly, has self awareness to know how to attack each reception.

Power at POA: Scrappy. Can be effective out in space to pin linebackers or seal the edge with a crack block. Traditional in-line usage is out of the question due to stature and lack of power to hold ground against $250+\mathrm{lb}$ defensive linemen.

Competitive Toughness: Plays fearless, although will be limited by stature at the next level. Willing to work over the middle of the field and take body blows. Scrappy in blocking situations in the flat to stay sticky and sustain hand fit on defenders.

Flexibility: Terrific ability to contort body and adjust to the football. Capable of playing low to the ground based on not just stature but ability to lean, drop hips and get center of gravity down.

Balance: Natural athlete with ability to stay upright. Has good, low hips as a runner and is able to cut back across his momentum and sustain speed.

Football Intelligence: Versatility has led to exposure in a lot of different roles. Has been terrific in anything put on plate, from blocking in the backfield to route running to carrying the football. True "football player" through and through.

## FILM ASSESSMENT

Games watched: Notre Dame (2016), Toledo (2017), Florida State (2017), Syracuse (2017), Virginia Tech (2017), Notre Dame (2017)

Route Running: Does not show a great deal of creativity getting up the field. Straight line runner and most effective breaking into soft spaces against zone coverage. Can be effective in bumping off defenders and continuing up the field in man to man. High quality check down receiver.

Hands: Soft, reliable hands. Will extend away from body to greet the football and does so both in uncontested targets and tight spaces. Effective tucking the football away quickly after the catch and transitioning into a run after catch player.

Versatility: Effective as a traditional in-line tight end. Has quality results as a blocker and has done so while being tasked with handling role from in-line, H-back, flexed and other positions. Dangerous RAC athlete thanks to good athletic profile.

Contested Catch Ability: Has not been frequently tested in contested areas, more of a zone beating receiver. Does have the hands and frame to succeed and absorb contact from defenders in order to gather the ball. Needs to be more effective beating tight man coverage to increase volume.

RAC Ability: Potent blend of size, burst, balance and vision. Challenges defenders in short areas with an aggressive charge. Free arm is accurate in staving off contact. Can drastically stride to adjust for contact or avoid tacklers before collecting and continuing up the field.

Power at POA: Has good push at the point of attack. Does well to play with square and balanced feet to consistently adjust to force applied from defenders. Will effectively seal against second level defenders shooting through a gap.

Competitive Toughness: Plays with a good motor. Effective both in opportunities in the run and pass game. Will look for work as a supplemental pas protector. Can be found pressing to help push the pile late if catching up to the play as a trailing player.

Flexibility: Shows excellent lower body mobility and comfort playing with active, engaged feet. Will toggle steps to stay framed and engaged with defenders. Has good looseness in the open field to aid in efforts to create missed tackles and establish extra yards.

Balance: Can occasionally get caught with a heavy blow and get knocked off of set. By and large shows good reactive control to stay upright against power rushes or hand counters. Patient in space as a freed blocker. Takes on contact well as a runner.

Football Intelligence: Would like to see role as a receiver continue to open up with more subtlety to routes; can use head fakes and false steps to force commitments from defenders. Has filled numerous roles well and shows good reliability as a blocker to execute assignments.

Games watched: Oklahoma State (2016), Ohio (2016), Toledo (2017), Wyoming (2017)

Route Running: Needs to be more aware of selling stems and create more false steps from defenders in the secondary. Has a good ability to play through contact both at the LOS and the catch point alike. Active in downfield targets and has ability to hit seam hard.

Hands: Has very good hands, showing good concentration skills and quick reactionary quickness to react to a ball coming in hot and still receive with the hands. Has effective strength in the hands to prevent defenders from jarring the ball loose on contact.

Versatility: Flexed out frequently and given the chance to operate as a true receiver. Is one of the better two way TEs in the class, capable of playing inline, out of the backfield as a motion player or flexed out wide. Has been given reps as an isolation receiver in the red zone as well.

Contested Catch Ability: Highlight reel catches are impressive and will be more productive when given better balls on back shoulder throws and fades. Size and length is a good mismatch if able to isolate on Safeties in the secondary.

RAC Ability: Has some fair juice in the open field but isn't notably explosive. Has little wiggle or ability to create a false step, a similar trait to initial route running ability. Good strength to shrug off light contact and continue up the field.

Power at POA: Has a great base, shows good footwork to keep defenders framed. Initial engagement is strong but does not illustrate a great deal of secondary push. Will sustain blocks long enough for plays hitting the LOS on time to press through unbothered.

Competitive Toughness: Does not possess great functional power and can struggle at times to jostle for positioning at the catch point when trying to adjust to poorly thrown balls. Hard worker at the catch point to optimize catch radius around and through contact.

Flexibility: Great body control and mobility both when engaged initially on blocks and as a receiver. Has effective hip roll at punch to play with some pop in the hands. Loose frame allows for late adjustments to a ball when tracking.

Balance: Plays with control when squaring up defenders. Does well to gear down and address a block with patience and not throw body into hits. Needs to try to be more under control when elevating and trying to get vertical for 50/50 throws to maximize athleticism.

Football Intelligence: Basketball background is evident and lends well to receiving skills. Has done very well to develop as a blocker and illustrates impressive every down abilities. Should be able to step in and contribute as a blocker immediately with situational receiving reps.

## FILM ASSESSMENT

Games watched: Virginia Tech (2016), Texas A\&M (2016), Georgia Tech (2017), Florida (2017)

Route Running: Doesn't show a lot of suddenness at the top of routes but has good athletic ability to carry routes up the seam. Doesn't have exceptional long speed but capable of quickly slipping past LBs on the second level to hit a chunk gain.

Hands: Consistently capable of reaching out to pluck the football, showcases an impressive catch radius, especially considering had measurement. Soft hands do well to haul in errant throws and finish contested catches in high traffic targets.

Versatility: Has modest abilities from a flexed position, although athletic ability is not a primary strength. Would be a strong option for a depth piece and can be relied upon for execution of responsibilities in the box consistently.

Contested Catch Ability: Has very good concentration to not be bothered by bodies crossing in front of the ball during targets. Has good size and notable ability to play long to attack the football with aggressiveness.

RAC Ability: Doesn't show a lot of creativity after the catch. Lacks a high level of burst to pull away from defenders in and after the catch but has good vision to make the most of afforded space.

Power at POA: Good posture and balance as a drive blocker off the line of scrimmage. Rolls hips through contact well on fold blocks to create push and collapse linebackers filling into gap. Needs to avoid overextending after initial contact against heavier defenders.

Competitive Toughness: Tough over the middle receiver. Mixed results as an inline blocker, best as a fold blocker from a flexed H-back position. Active and engaged as a blocker with consistency despite lack of usage in the receiving game.

Flexibility: Shows good ability to contort the body and make most of frame in effort to elevate or extend for errant throws in area. Has good roll through the hips and is capable of unlocking at first contact to put power through the body of defenders.

Balance: Needs to continue to dedicate efforts to keeping width in the feet to prevent spinning off of blocks. Can afford to play with pads lower to prevent being knocked out of desired trajectory on routes by contact running through the teeth of the defense.

Football Intelligence: Highly seasoned athlete with a lot of experience and exposure to NFL competition at Tennessee. Has a consistent approach and by and large can be relied upon to make primary play without busting, particularly with flexed blocking between the tackles.

## FILM ASSESSMENT

Games watched: Florida State (2016), Vanderbilt (2016), Michigan (2017), Georgia (2017)

Route Running: Is lacking in the burst, quickness or power to consistently beat man to man coverage. Valuable as an underneath receiver to work around zone coverages and sit down in space. Willing to work the MOF and does so with confidence and speed.

Hands: Very low drop rate, has reliable hands in a vast majority of situations. Drops increased slightly in 2017 but still should be considered a hands catcher who can cleanly put the football away. Catch radius is not especially large, however.

Versatility: Flex/move piece despite sprinkling of in line reps at the college level. Does not have the functional play strength to line up and blow defenders off the LOS. Moderate value as a short area receiver and create some yardage.

Contested Catch Ability: Does not illustrate ideal length or frame to be a red zone contested catch receiver at the next level. Tough receiver who is willing to take contact and see the ball into hands.

RAC Ability: Smooth runner with the football. Has some nifty first defender counters to create a missed tackle. Does not have notable explosiveness or power to create through contact. Has a modest ability to create short area yardage but expectations should be limited to such.

Power at POA: Is more of a steering blocker than a power blocker. Does not show a great deal of pop in hands to jolt and reset the LOS, but is capable of staying sticky courtesy of foot activity and hand grip to contest and throw blocks.

Competitive Toughness: Is largely a finesse player. Fearless working over the middle of the field, however. Can run drag routes without letting squatting second level defenders from influencing ability to carry speed or track the football.

Flexibility: Has a fair amount of looseness through the lower half. Has ability to pivot and peel back to greet defenders shooting gaps or space outside the hashes as a blocker.

Balance: Will get pushed around in heavy traffic areas. Likable balance in space as a blocker to square up second level defenders, can sit down and get framed on a defender and throw blocks against fast flow.

Football Intelligence: Has done well to maximize a skill set that features a lot of modest traits, athletically. Vision of the field and ability to get into position both as a blocker and potential receiver are appealing, especially in such a chaotic offense.

## FILM ASSESSMENT

Games watched: Ohio State (2017), Virginia (2017), Georgia Southern (2017), Pennsylvania State (2017), Michigan State (2017)

Route Running: Needs to do better with effort on all routes; telegraphs plays as a non-factor. Is not super quick at the top of routes but rather can overwhelm defenders with size at the top of stem before bumping off and creating Separation.

Hands: Soft hands, does well to extend and catch the football away from his body. Has little in the way of limitations when adjusting body to get both hands around and square to the football. Has good hand strength to finish receptions when going to the ground.

Versatility: Most favorable role is as a flex receiver; has been hidden in formations as an H-back and found success releasing into the secondary. Has size and fluidity to be effective as a "big slot" or flex Tight End. Needs to be utilized as a receiver, however.

Contested Catch Ability: Has desirable size and does show good toughness to use frame and box out defenders. Catch radius will prevent defenders from playing through hands easily and cause headaches if trying to come back through body to contest the throw.

RAC Ability: Doesn't have a dynamic second gear but does show enough long speed to make defenses pay if able to find a soft space up the seam. Toughness is present when attacking smaller defenders one on one and attempting to run through tackles.

Power at POA: Can be effective against more limited defenders; but if asked to work as a inline blocker is going to struggle greatly to maintain integrity of the pocket. Does not play with good hand strike or lateral footwork to stun and frame defenders as a blocker.

Competitive Toughness: Motor is an issue. Guilty of rolling out of stance and casually working through routes when tasked with clearing out MOF. Does not play with a notable presence as a blocker and is guilty of getting beat across face inside on run reps.

Flexibility: Loose torso and upper half to contort body and optimize catch radius to greet the football. Hips still carry somewhat tall at the top of breaks, which can negate some of quickness to create separation when not able to bump defenders.

Balance: Does not have foot activity needed to stay upright and balanced when attacking the point of attack or when playing in pass protection. Too quick to get out overtop of toes and overextend.

Football Intelligence: Needs a lot of work as a blocker; consistently beaten and/or out of position. As a receiver, has a good nose for finer points of route running and understanding how to optimally use body type and play style to win.

## FILM ASSESSMENT

Games watched: Southern California (2016), Southern California (2017), UCLA (2017), Notre Dame (2017), Texas Christian (2017)

Route Running: Uses size at the top of short routes in the MOF to bump and create space to uncover. Is not especially sudden and does not illustrate consistent ability to stretch the field. Needs to be tasked with working inside 15 yards of LOS and being a power receiver.

Hands: Reps are limited but has had a few drops when forced to adjust to poor throws, needs to ensure reception before lifting eyes to look for potential contact in high traffic area of the field.

Versatility: Has the feel of a TE2, will never by a dynamic receiver. That said, has room to grow as a receiver by cleaning up hands and in the right system can be a consistent chain mover for his QB. Can run block and pass protect effectively.

Contested Catch Ability: Is a bit of a projection, but ability to body defenders at the top of route stems and bully smaller defenders suggests there's value here if hands are able to stay clean to the football. Highly effective bouncing off a leveraged defender late in the route.

RAC Ability: Is not going to be able to generate a high amount of yardage on own, instead will turn up field, run hard and make the most of touches to gain what is available. Doesn't show a lot of wiggle and has only modest straight line speed.

Power at POA: Terrific push at the point of attack. Shows good hand strike, placement and base of support to stay balanced on blocks and stay on blocks. Leg drive and natural anchor are strong, will sink hips and absorb DL rushes without issue.

Competitive Toughness: Second effort blocks have saved many runs gone awry. Will peel back and make self available as a cut back blocker on outside runs. Functional strength and power are notable and is an asset working from the inline alignment.

Flexibility: Shows impressive mobility throughout the lower body to keep base wide and sustain feet tied to the ground. Notable roll of hips through contact to punch, collapse and generate movement at the point of attack. Does look stiff out in space trying to run routes up field.

Balance: Established base is strong, allowing for consistent application of power through feet at the POA. Does show some lapses when trying to press for a landmark, will overextend or leave feet to cut low and get in the way. Absorbs contact well, both as blocker and out in space.

Football Intelligence: Very polished player inside of 10 yards. Wins with angles, body positioning, hand usage and a great base. Should be able to get a lot of reps as a blocker early on in NFL career thanks to highly effective skill set at the LOS.

TE Combine Avg. (03-16)

Games watched: Boston College (2016), Michigan (2016), Alabama (2017), Clemson (2017), North Carolina State (2017)

Route Running: Is not a man beater on routes, lacks the juice and fluidity in breaks to be able to snap off of push and cause separation against athletic LBs or nickel defenders. Shows awareness to bump tight coverage at the top of breaks.

Hands: Is not the most natural catcher, shows a tendency to trap the football. That said, is a sure receiver that hasn't experienced many drops during time with the Seminoles. Has made a handful of tough catches but often receives throws on the body.

Versatility: Tasked with a lot of motion and changing angles on blocks. Has been effective in doing so but would not be a favorable projection to flex into the slot and run routes, as many of today's modern TEs do.

Contested Catch Ability: Does not have a great deal of length illustrated on film, many receptions have come uncontested slipping past the second level on delayed releases up the field. Has not created separation consistently and therefore worrisome projection vs. athletic defenders.

RAC Ability: Unspectacular after the catch receiver. Has good physicality and awareness to turn eyes up field and run into contact to fall forward and make the most of open field. Doesn't have any notable wiggle or burst to win yards with finesse.

Power at POA: Is able to create nice push down into the POA and soften edges in the run game as a down blocker. Has nice pop in the hands but can get caught carrying hands too low prior to first strike. Thick trunk/torso and has requisite strength to play effectively at POA.

Competitive Toughness: Tenacious to try to stick to defenders as a blocker, will show admirable recovery ability after taking a blow and losing footing. Has stout skills in pass protection. Has frame needed to sit in the middle and uncover vs. zone before taking body shots.

Flexibility: Doesn't show a great deal of flexibility through the hips to change directions and flip back to the field once committed directionally. Has high hips and pads at the top of route stems, limiting suddenness and ability to quickly change direction.

Balance: Has good recovery balance after taking contact from defenders due to hand strength to stay engaged and effective center of gravity. Plays with active feet to keep momentum once able to create push and collapse the POA as a drive blocker.

Football Intelligence: Crisp and effective in assignments as a blocker. Has good vision and anticipation to step into blocking assignments and cause a steeper angle for defenders to attack in pass pro. Movement blocker able to identify defenders on the fly.

## FILM ASSESSMENT

Games watched: Texas (2016), Southern California (2017), Miami FL (2017), Stanford (2017)

Route Running: Does not have a lot of fluidity throughout the top of routes, is more of a bruiser who will bump defenders off of hip at the top of breaks. Does have a modest ability to separate against LBs and use size to bump late prior to flashing the hands.

Hands: Showcases strong hands, particularly in the middle of the field to flash hands and gobble up the football when afforded the chance. Has soft hands and is comfortable extending away from the body to finish receptions.

Versatility: Is a traditional inline blocker and will only provide a marginal value to the game as a receiver. Is not a receiver who can be flexed outside or tasked with playing one on one reps as a receiver in the red zone. Blocking first role is most favorable.

Contested Catch Ability: Big body and knows how to optimize frame to shield throws and cradle the ball, preventing defenders from ripping it out. Has good hands and concentration to hold steady at the catch point.

RAC Ability: Is not going to be a player who can turn the ball up the field and break pursuit angles. Is a bit lumbering in the open field and does not have a great deal of lateral quickness to step out of tackle attempts.

Power at POA: Terrific balance and posture control to stay square on defenders when blocking from an inline position. Effective strength in the hands and foot speed to run defenders off of the LOS and continue to sustain push up the field.

Competitive Toughness: Tireless worker as a blocker to stay engaged through the whistle. Has made a positive impact on team despite run first mentality and poor quarterback play, not once allowing situation to negatively impact efforts before the whistle.

Flexibility: Showcases some rigidness at the top of route steps to struggle to peel off of a break and snap the head around with quickness to flatten routes and uncover. Shows great lower body mobility to throttle and mirror as needed from an inline position.

Balance: Blocking posture is excellent courtesy of foot action, width in base, functional strength and ability to sustain posture (core strength) while moving with defenders. Can easily be chopped down in the open field after the catch, however.

Football Intelligence: Plays to strengths, although receiving skills do have room for growth in an offense that will prioritize moving the chains via the middle of the field. Great awareness of body positioning and illustrates good control at the LOS to established needed positioning.

## FILM ASSESSMENT

Games watched: Memphis (2017), Memphis (2017), Maryland (2017), Southern Methodist (2017)

Route Running: Still developing in terms of release timing and how to use false stems to create additional space when releasing up the field. Has good acceleration to pull away from box defenders on vertical style routes. Runs everything in straight lines.

Hands: Flashes an impressive and natural ability to receive with the hands. Still requires polish as it relates to extending away from body to catch the football and not flash hands prematurely at the catch point.

Versatility: Has athletic ability to become a viable receiving threat, although physical prime has been entered without much in the way of polish to pair with. Projects most favorably as a flex only receiver or H-back type as compared to playing in line.

Contested Catch Ability: Does have a nice catch radius and large frame. Would like to see additional strength flashed at the catch point to prevent defenders from getting into the body so easily. Can allow a defender into the hands when forced to make catches in tight spaces.

RAC Ability: Has great burst and will pull away from defenders of his stature in the open field. Has good deal of quickness and ability to collect balance without contact and redirect momentum up the field. Has functional strength to run through soft tackle attempts.

Power at POA: Shows subpar ability to dictate and control the line of scrimmage. Is too loose with blocking stature and as a result will get beat to the punch and lose first contact. Fails to show ideal lower body power to push off of the LOS when engaged.

Competitive Toughness: Effort is strong, as is background story and perseverance to change sports. Physical power and skill dictating power both on route stems and as a potential blocker are only pedestrian. Is most effective as a screen blocker in space.

Flexibility: Has natural mobility and a clean ability to play with low hips. Movement inefficiencies are not a problem of physical restrictions but rather a lack of developed intent behind movements.

Balance: Natural athlete who shows well in the open field. Has no issues with staying balanced on route stems and running down the field. Has visible issues with trying to stay upright and stay in front of defenders, particularly in the box.

Football Intelligence: Very green. Has to completely overhaul approach to route running when working against leveraged defenders in order to increase win percentage. Ineffective as a blocker due to poor control and patience.

## FILM ASSESSMENT

Games watched: Rutgers (2017), Washington State (2017), Pennsylvania State (2017)

Route Running: Does not showcase a lot of quickness on route releases. Lethargic in space and does not create separation as a route runner. Does show awareness to sit down in holes vs. zone and become available for his quarterback.

Hands: Limited targets but does not appear to have any issues with receiving the ball with hands. Has a nice catch radius despite a lack of great length to play the ball away from chest.

Versatility: Does not currently bring any notable receiving skills to the table. Would provide value as a short yardage blocker and TE2 in a traditional sense. Lacks the athletic ability to offer a lot of additional upside to game.

Contested Catch Ability: Shows awareness of the value his frame can provide. Body bumps defenders when sitting down routes and has the frame needed to create softness against squatting zone defenders.

RAC Ability: Will not provide any notable burst or creativeness to create additional yardage. Can serve as a chain mover but lacks needed athletic ability to be a mismatch or dynamic receiving threat.

Power at POA: Very effective in-line blocker, capable of winning reps against end defenders on the line of scrimmage and will collapse the POA with a strong punch. Likable framing of blocks with wide set feet and effective mobility when square to the LOS.

Competitive Toughness: Very physical player. Ability to play in-line is a key trait when compared to his contemporaries. Functional strength is excellent to bring early value to his NFL franchise. Second effort push makes space to collapse the edge.

Flexibility: Bit of a lumbering presence when out running routes. Does not show great lower body mobility to fluidity to break off a route stem and snap head around to create any viable separation against LBs in man to man.

Balance: Work as a blocker from the LOS is terrific, showing strong lateral mobility, foot activity and functional strength to prevent being collapsed. Sustains blocks with a lot of consistency.

Football Intelligence: Former defensive line convert, played first two years at the college level at defensive end before flipping to TE in 2016. Will need to learn more nuances to separate against man coverage.

## PRODUCTION SUMMARY

52 receptions, 688 receiving yards, 7 receiving TDs

TE Combine Avg. (03-16):

Route Running: Plays a bit awkward, running upright and too frequently running into contact on the second level. Will do well to sit down and make self available on short area routes. Has only decent COD at the top of a hard break, more of a post/drag/fade receiver.

Hands: Has double caught some targets, looks to be an issue of concentration and fully seeing the ball into frame. When not pressured to flip the eyes up the field will be much more consistent to see the football into the hands and finish.

Versatility: Purely a receiver, will not inspire or provide results as a blocker despite favorable length and frame. Certainly has upside to develop and become a more well rounded blocker to turn into an every down player, but is a long ways off.

Contested Catch Ability: Inconsistencies with hands show up when tasked with having to try to concentrate on the ball while being collisioned at the catch point. Has thick frame but can still get uprooted and pushed around when trying to cradle the football.

RAC Ability: Straight line burst is potent to turn up the sideline and pick up chunks of yardage. Will zip past pursuit angles courtesy of short area acceleration. Doesn't have a lot of wiggle or lateral mobility to slip past potential tackles in tight space.

## FILM ASSESSMENT

Games watched: Wisconsin (2016), Southern California (2017), Michigan State (2017), Central Michigan (2017)

Pass Sets: Has terrific feet in kick slide but has a bad habit of allowing defender's punch to collapse the outside foot, softening an angle to turn the corner. Very light and nimble on feet, has mobility for deep pass sets and quickness for slide protections to prevent defenders crossing face.

Length/Extension: Has needed length to play OT, would like to see strikes throw a touch sooner to help maximize anatomical advantage of longer arms. Plays with terrific strength with hands away from frame, will snuff out defenders with grasp in both zone run and pass pro.

Balance: Has very strong center of gravity thanks to wide base. Natural power allows for sustaining width in the feet while playing against contact. End result is very infrequent reps spinning off of contact or not being able to sustain hand grip.

Hand Technique: Hands are extremely powerful, but does need to watch grabbing cloth too tight to the armpit, has some questionable reps in regard to holding. Hands do well to flash tight to center of strike zone and possess solid natural pop.

Power at POA: Is a people mover, but also has mobility to work across the body of defenders and turn out in zone runs. Has a good deal of linear pop, will utilize the posterior chain to jolt defenders on contact and collapse the line of scrimmage.

Football Intelligence: Will get caught sporadically late on a stunt and be late to peel back to the second defender. Has understanding of athletic ability and optimizes it with good angles and aggressive play down the field in the run game.

Functional Athleticism: Has the ability to climb the ladder, get out into the boundary as a puller or hinge and get width on zone runs. Mobility for size is pretty special and placement in a true zone run heavy system would optimize ability to play with power on the move.

Anchor Ability: Heavy hips and powerful legs allow for absorption of contact, even after conceding first contact to defenders rushing from wider angles. Is very stubborn at the point of attack, rarely bubbled backwards and forced to give ground.

Flexibility: Should not have the ability to move in the ways body does for stature. Is highly loose, natural athlete in the open field as a space blocker and has no issue with getting hips open to the boundary in deeper pass sets. Shows good coil through the hips and knees to explode into contact.

Competitive Toughness: Team leader, has good habits after the snap: will go out of way to help up teammates. Functional strength is a huge asset between the snap and whistle. Has good hustle to run up the field and look for extra blocks to pick up on big runs.

7.80

OT Combine Avg. (03-16): $\quad N / A$

- Short Shuttle:

OT Combine Avg. (03-16):

Pass Sets: Has a strong cadence off the right side. Shows comfort and control in feet to work off the LOS and gain depth while framing pass rushers appropriately. Covers notable ground on first drive step out of stances to steeping edge angles.

Length/Extension: Surreal length and has done well to consistently optimize extension skills. Will extend arms and run rushers past the peak of the pocket with little issue, creating a firm edge to the pocket and giving QB plenty of room to step up.

Balance: Utilized wide base with effectiveness, has no problem with shifting weight to either foot and driving through step to keep posture tall and balance under control when pressured.

Hand Technique: Hands are powerful, does well despite long length in wingspan to strike out with good timing. Sinks in a strong hold on defenders when working tight and shows understanding of how to push/pull defenders and generate turn at the POA.

Power at POA: Will uproot defensive ends in the run game with effectiveness. Will drive the feet and keep defenders frames well, is not often caught spinning off of a block with narrow feet.

Football Intelligence: Very likable usage of athletic ability to subtly manipulate defenders at the POA and win favorable body position. Takes good angles working on 45 degree pass sets and when tasked with cutoff blocks on the first and second level.

Functional Athleticism: Is not the most sudden mover, but does move with fluidity and grace. Does not labor when isolated to work back inside and slam shut vs. inside moves. Effective staying sticky after point of first contact due to active feet.

Anchor Ability: Powerful lower half. Has strong core and no issue with eating up power rushes if tested by interior defenders in pass protection. Natural strength is notable and paired with a strong set of feet in protection to stay tethered to the ground.

Flexibility: Pad level can be an issue at times but by and large has the strength to mask it. Has good bend in the knees and is able to sustain a wide base of support when on the move in pass sets to keep balance and ability to redirect vs. rushers in space.

Competitive Toughness: Has good peripheral vision to identify late rushers or opportunities to pick off defensive flow. Plays with a great level of functional strength and ability to bully rushers if tested with power.

## FILM ASSESSMENT

Games watched: Oklahoma State (2017), Texas (2017), Ohio State (2017), Texas Christian (2017), Iowa State (2017), Georgia (2017)

Pass Sets: Is most effective on lateral sets or shallow pass Football Intelligence: Is very disciplined in drops, mitigating foot speed and allowing length and natural responsibilities, rarely caught leaning and not ready to fulfil anchor to absorb defenders and steepen angles for cornering. Does well to keep leverage inside out and will sustain post leg up field to keep inside gap shut.

Length/Extension: Has vines for arms, will ride out rushers along the outside and natural length is consistently enough to keep defenders from flattening quickly. Can improve strike accuracy to optimize length but shows great recovery skill with wingspan.

Balance: Can get knocked off trajectory due to a narrow base at times. When trying to handle speed rushers will let feet narrow and as a result can be susceptible to power rushes. Has a natural anchor to recover in such situations but will inevitably give ground.

Hand Technique: Needs to clean up the strike zone, will often catch jab on the top of defender's shoulder pads as compared to on the numbers. Does well to rework hands into a favorable position and shows a great deal of hand strength once a fit is established.

Power at POA: Plays like a sledgehammer at the POA. Consistently blows out of stance on drive plays and washes out defenders. Has excellent ability to yank defenders out of position with hands and wall off gaps in cut off situations or reach blocks.
primary responsibility in protections. Will take inside rusher, knows when back has protection on gap inside or out. Handles stunts well.

Functional Athleticism: Is pleasantly mobile when getting out of stance. Has been used as a puller in power plays to far side of field, does well to get into alley and turn up to seal out defenders. Has great ability to stay sticky on second level defenders due to size and athletic ability.

Anchor Ability: Heavy, powerful lower half. Has great natural strength and will win reps other tackles will not just on account of the power in frame. Will stonewall B-gap defenders when blocking down in slide protections. Will handle head up power rushers with ease.

Flexibility: Does not play with an enviable pad level due to stature. Has a modest ability to hinge the hips and greet wide angled rushers. Does illustrate ability to drive out of kick step and keep feet out from underneath of hips to play with a solid base.

Competitive Toughness: Mean, nasty mauler and plays with a large presence both as a pass protector in help situations or when emerging on the second level. Strength is staple of game and can be a valuable tone setter for a gap/ power team.

## FILM ASSESSMENT

Games watched: Western Oregon (2017), Simon Fraser (2017), Central Washington (2017), Senior Bowl (2018)

Pass Sets: Has a great cadence in feet. Trusts footwork to carry to needed framing of pass rushers. Illustrates desirable foot quickness to get depth and drive out of stance in a hurry as needed. Sustains a balanced posture and does well to keep tied to the ground.

Length/Extension: Showcases requisite length to play tackle but more importantly does very well to sync up strike timing and catch defenders entering area at optimal timing to offset forward momentum of defenders.

Balance: Feet are constantly in motion and consistently on the ground. Has some of the best mirror ability in the class to stick with defenders in open spaces. Does well through contact to keep the feet moving and transfer initial blow into forward momentum.

Hand Technique: Hands are compact and land in the breast plate of defenders with good consistency. Has terrific ability to uproot defenders trying to disengage from the block and has a notable number of knockdowns directly attributed to hand usage to tug off base.

Power at POA: Initial explosion out of stance is primary key to establishing push at the LOS. Would like to see some additional upper body strength added through weight room work, is underdeveloped in the upper half RE: body composition.

Football Intelligence: Level of competition concerns are mitigates with strong Senior Bowl, but not fully alleviated. Has proven to mentally handle bigger/faster/stronger athletes but much of domination on tape came down to balance and hand power vs. outmatched defenders.

Functional Athleticism: Very fluid in space. Quickness and effectiveness can be attributed to balance and base to always stay in control of body. Effective extending up to the second level and picking off LB flow on the backside. Can be used as a space puller to get out in front of runs.

Anchor Ability: A bit light in the trunk, which will need to continue to be addressed. Carries a lot of weight below the waist, so hip drop is present to sink and absorb a power rush. Needs to continue to work and remold upper body strength to alleviate strength concerns.

Flexibility: Has nice lower body mobility, consistent in steps and does well to isolate the legs in pass sets while keeping spinal posture tall on the hips. Has ability to bend the knees and sink the hips in order to sustain leverage in pass sets.

Competitive Toughness: Plays bigger than size on account of balance, hand efficiency and movement skills to out-leverage defenders. Likable tenacity as a run blocker to stay in the face of defenders and offer little window to step laterally and escape.

## FILM ASSESSMENT

Games watched: Texas A\&M (2017), Colorado (2017), Memphis (2017), Stanford (2017), Arizona State (2017)

Pass Sets: Foot cadence is strong. Would like a bit more initial drive out of stance with first kick but overall frames defenders well out in space. Needs to get hands synced up with rest of the body to optimize play. Good angles out of stance to greet rushers.

Length/Extension: Has terrific length, every trait needed to be highly effective away from the body. Hands can carry low and strike late, which gives up chest and exposes some anchor issues due to leverage of a high pad level. Needs to improve extension and strike timing.

Balance: Can get knocked around some due to frame, is top heavy and doesn't carry a lot of mass from the waist down. Has a strong base to stay balanced and sustain blocks but can give up space if taking of heavy contact and lose ability to drop hips and anchor.

Hand Technique: Hands are active and engaged to work for a more favorable hand fit throughout protection reps. Has awareness to attack at the wrist and left to rob rushers of leverage. Needs to improve initial strike and height of hands to carry and be ready to throw.

Power at POA: Terrific push when able to fire off the ball. Effective in both man to man and double teams to create movement and be a reliable POA resetting blocker. Strength stems from momentum and total body strength, masks lack of leverage issues effectively.

Football Intelligence: Angles in both run game and pass set are strong. Processes stunts and double teams well to identify and attack a fresh face if poking nose into responsible gap. Still a bit raw technically from the waist up, however.

Functional Athleticism: Has a touch of stiffness through the hips but in linear situations and when climbing to the second level can be an asset in the run game. Has enough foot quickness to mirror and stay balanced on defenders rushing off of the edge.

Anchor Ability: Strength lies in the hands and upper body. Will not show top shelf ability to drop the hips and eat up power rushers, instead needs to win with first strike to negate forward push from defenders trying to collapse the pocket and bull to target.

Flexibility: Shows some tightness in the hips, particularly when trying to sink. Will pop tall out of stance when trying to get lateral width, struggles to hinge cleanly without having to turn the body.

Competitive Toughness: Mean. Is consistently able to win reps thanks to hustle, athletic ability playing forward and usage of the hands. Given and winning tough assignments with far reaching landmarks.

## FILM ASSESSMENT

Games watched: Boise State (2017), Southern California (2017), Colorado (2017), Michigan State (2017)

Pass Sets: Effective initial drive out of stance due to light feet. Has the needed step frequency to gain distance and not be pressured up field by a vast majority of pass rushers. Has effective angles and trusts feet to carry out of stance and into space.

Length/Extension: Has requisite anatomical length but does not show desirable habits and skill in hand usage to throw strikes early and set the tone of reps. Needs to tighten punches into center of body and extend through with greater intent.

Balance: Can be quantified two ways: balance in open space is very strong. Quick, swift feet and carries frame well. Balance in tight quarters when absorbing contact is problematic, will get knocked around and catch hands too frequently.

Hand Technique: Hands are carried low in pass sets, needs to posture with a more favorable position to prevent giving up a big blow with consistency and allowing pad level to be jolted. Aware of need to rework hands after first punch, does well to find a grip after impact.

Power at POA: Does not offer a great deal of push in the run game. Would be more effective as a zone blocker due to lack of lower body power and poor habits with hands to strike and create initial push forward into the defensive side of the LOS.

Football Intelligence: Has terrific playing experience, usage in Air Raid offense has allowed for development of some good habits as a pass protector, although striking and hand usage are going to be problematic until development takes place.

Functional Athleticism: Easy, free moving athlete with short area quickness to be implemented in the run game. Can get out of stance and into pulls as a boundary runner with effectiveness as well.

Anchor Ability: Is far too soft in the trunk and ability to drop the hips. Needs to spend notable time addressing weak core and lower body, will get bubbled too easily and will concede space by untying both feet to the ground in efforts to regain leverage.

Flexibility: Has little issue with reaching and extending feet out away from hips to gain depth in pass sets. Comfortable driving off of inside leg on quick sets as well. Hips are loose as a puller and could have success consistently hinging and opening to the boundary.

Competitive Toughness: Will get pushed around with too much frequency. Unfavorable play strength negates a lot of great initial traits and baseline skill set. As a result, favorable projection with weight room work.

OT Combine Avg. (03-16):
$N / A$
$29.50^{\prime \prime}$
N/A
8'07" 8'5"
Power at POA: Will not consistently generate push on account of foot activity and width of base, has a hard time getting stars aligned to get everything behind blocks and create big movement. Much more effective against defenders of smaller stature.
Hand Technique: An area of continued development. Still needs to work on accuracy of hand placement and know when to pull away from a block to avoid potential holding calls. Has become better with using length to an advantage instead of catching blows.

Pass Sets: Struggles on account of limited foot speed to gain depth in kick slide and protect against faster pass rushers without having to bail out his base. Has made notable improvements on the edge since 2016 conversion from LG to show nice cadence of feet in shallow sets.

Length/Extension: Does possess length to be used as an asset. Will extend arms when pressured in deep sets to run rushers beyond the peak of the pocket. Has ability to play with lateral range with hand is extended away from body to stave off defenders shooting gaps.

Balance: Plays on a narrow base as a drive blocker, will lose footing and fail to maintain block. Cadence in controlled pass sets show good weight distribution, although once locked up with defenders will untether the inside leg and soften post stance.

Football Intelligence: Can stand to improve angles when releasing onto the second level to work into position to pick off backside flow. Promising upward trajectory as pertains to hands and feet, suggesting good retention and coachability.

Functional Athleticism: Struggles to gear down and mirror in space, but has a nice release out in front of slow developing plays. Adequate lateral mobility but foot speed is a consistent issue that causes missed blocks and overrunning potential second effort plays.

Anchor Ability: Plays with high hips, needs to be able to sink and absorb contact cleanly through the ground. Has been caught untied to the ground and will give up notable ground against bull rushes if not quick to throw hands and stun a forward push .

Flexibility: Shows need to keep hips and pads tied together, is not capable of a whole lot of independence between the upper and lower halves. Hip drop needs to be improved to prevent the need for much more lower body and core strength.

Competitive Toughness: Likable effort levels to find work if left unoccupied by pass rush initially. Does well on screen plays and short passes to zip down the field in an effort to create a big play block.

OT Combine Avg. (03-16):

Pass Sets: Is a complete shot in the dark. Hasn't been asked to play as a pass protector and first extended looks at the Senior Bowl illustrated promise but a long way to go as it relates to development.

Length/Extension: Has requisite length to play OT at the next level and is eager to throw the hands and bully defenders. Has no issue with attacking early in a rep thanks to aggressive nature and defeat a charge into the backfield.

Balance: Is very difficult to get unglued once set with hands and able to create the first step of forward push in the run game. Looks to be on uneasy footing when playing laterally or in a pass set, feet are guilty of narrowing and limiting base.

Hand Technique: In-line usage is terrific. Settles into a firm fit on the breastplate of defenders and will keep the elbows tucked to sustain strength in the back. Needs to reel in punches on the second level, looks for knockout blows instead of latching firm.

Power at POA: Has overwhelmed many comers with ability to roll, latch and drive the feet. Effective gap/power blocker to create movement and collapse defenders effectively. Can be tasked with washing down, driving off the line or turning out.

## FILM ASSESSMENT

OT Combine Avg. (03-16): $\quad N / A$

- Short Shuttle:

OT Combine Avg. (03-16):

Pass Sets: Illustrates suboptimal depth in pass sets, especially for frame. Needs to get more drive out of initial step to prevent hinging to greet rushers too early and provide a soft inside angle to passer. Will need to improve hand usage and timing as well.

Length/Extension: Has tremendous natural length, but ability to implement is shaky. Prefers to play with hands tight to the chest and is not often seen extending the arms to run pass rushers past landmarks on boundary rushes. Will need to develop comfort and use length to advantage.

Balance: Would like to see a more fluid base, often times is caught leaning or fails to run the feet through contact as a way to keep hips overtop of center of gravity. Gets busted with a narrow base in pass sets and can be collapsed or turned out by a heavy handed rusher.

Hand Technique: Hand timing is off. Fails to capitalize on natural length and stun early in reps, instead will catch defenders and try to synch in tight and keep defender in close quarters. Does not often illustrate pop or press in drive block situations.

Power at POA: Modest success but has notable room for improvement if able to clean up the hands. Will never be a powerhouse due to leverage issues but with length and spatial mobility should have ability to run defenders off the line with more success than currently packaged.

## FILM ASSESSMENT

Games watched: Baylor (2017), West Virginia (2017), Baylor (2017), Oklahoma (2017)
Football Intelligence: Long tenured starter at LT, but technical development is still a marked issue that will need to be addressed. Is not an "instant" prospect but does have some useful tools that do warrant consideration for investment.

Functional Athleticism: Mobility is a non-issue, especially when tasked with playing forward. Lateral quickness is present in tight quarters, can get width out of stance in an effort to gain an angle on a defender working inline at the LOS.

Anchor Ability: Leverage can be something of an issue unless set firmly into the ground. Does have flashes of a strong, wide base and hips anchored low to the ground, but struggles to find this posture when forced to work on an island in protection.

Flexibility: Fails to unload the hips and roll through contact when blocking off of the LOS. Inability to coil through contact negates potential for road grading tendencies, instead relies on stickiness to stay engaged with blockers.

Competitive Toughness: Needs to play with more aggression. Mentality with the hands often comes across as passive, if able to have fire lit under butt and play with more urgency can see better consistency and results.

## FILM ASSESSMENT

Games watched: Kansas State (2016), Rice (2017), Arizona State (2017)

Pass Sets: Has experience as a protector from both inside and outside. Has light feet to gain depth as needed and accelerate to carry defenders out of pathway to the QB. Needs to improve initial angles to widen on desired sets and eliminate soft angles to the passer.

Length/Extension: Has adequate level of length and showcases working knowledge of how to implement, capable of throwing a strike as defenders enter vicinity as a pass rusher. Needs to know when to disengage and reset, however .

Balance: Will overcommit as a pass protector. Fails to showcase required foot activity once engaged with defenders and is too quick to fold at the waist and chase after defenders in space. Finishes too many plays on the ground.

Hand Technique: Does not possess a lot of natural power in the hands, is not a player that is going to be able to dictate reps and negate rushers without having body and pads behind the hands. Needs to tighten up strike zone and prevent hands from getting grabby outside the breast plate.

Power at POA: Is not a smash mouth blocker. Will have some success with defenders trying to pull away from grasp and uncover quickly to scrape. Will get stood up in some one on one situations as a power/gap blocker at the POA.

Football Intelligence: Well seasoned player with experience at every position along the offensive line except for Center. Has good sense of timing and ability to sell false reads to influence flow on the second level and create natural gaps in the defense.

Functional Athleticism: Has some success as a quick puller to fold around a down block and turn back up into the alley and challenge filling defenders. Has modest mirror ability but showcases poor balance when left on an island and forced to mirror.

Anchor Ability: Light in the trunk. Does not carry a notable amount of weight below the belt and will struggle to eat up bull rushes from accurate counters that rely on strength and lower body power. Will be collapsed into the lap of passer too easily.

Flexibility: Hips appear to play a touch tight and struggles to disassociate from the shoulders when tasked with taking deeper pass sets, instead will drop entire frame and square to rushers, which allows for inside counters and a late ability to try to pin inside.

Competitive Toughness: Plays with good effort, visible effort to stay out in front of outside runs down the field. Is a player who will look for work if left unoccupied and take advantage of reps to knock defenders off course with a late challenge.

## FILM ASSESSMENT

Games watched: Miami (2016), Northwestern (2016), Pennsylvania State (2017), Virginia Tech (2017), Miami (2017)

Pass Sets: Has difficulty cleanly driving out of stance to gain depth in pass set. Will false step, fail to gain depth and be forced to flip hips up the field and out of a leveraged position on deeper pass sets. Fails to use aligned angles to steepen track of pass rushers.

Length/Extension: Illustrates great wingspan for the position, although utilization is a work in progress. Has to become more aware of when to strike with the hands and consistently generate a stun as compared to catching bodies. Will extend arms to run rushers past the pocket.

Balance: Is more compromised with base the higher the traffic in area is. Will get knocked around and collapsed with a defender in face, but when isolated in pass protection in space or as a blocker detached from the LOS will carry frame well on balanced feet.

Hand Technique: Has very little idea what to do with hands. Placement is high and wide, hands are not thrown with power and too often catches defenders. Struggles to work into a fit position, instead with leave hands and end up lassoing the body of defender.

Power at POA: Is capable of generating some movement but needs to continue to work on established base in tight areas. Feet will deaden and fail to carry through initial forward push and finish reps when locking horns with heavy hitters up front.

Football Intelligence: Only converted to playing offensive tackle as a freshman (played TE in HS). Developmental curve has a ways to go still, is raw in many technical components of the position.

Functional Athleticism: Is terrific out in space. Natural moving athlete, has little issue picking off second level flow in the run game or pulling to get out in front of a play with quickness. Has mobility to work down the field without any issues.

Anchor Ability: Is very light in the trunk. Will get bubbled backwards and give far too much ground against twitchy speed to power rushers. Needs to dedicate time to the weight room and add lower body power and functional strength to skillset.

Flexibility: Has no issues with mobility. Can hinge and open the hips with little effort out of stance to quickly get out in front on boundary runs. Would like to see more coil through the hips when rolling through into contact.

Competitive Toughness: Does not play with physicality at the point of attack. Has some flashes of impressive burst and movement skills to win positioning but overall is too passive and lacking in strength needed to play at an especially high level.

## FILM ASSESSMENT

Games watched: Western Michigan (2017)

Pass Sets: Shows desirable ability to get depth in pass sets and has good cadence on deeper drops to stay in line with protection schemes. Will labor after contact to sustain positioning, stops the feet and will drop the head. Gets caught leaning.

Length/Extension: Has terrific anatomical length but doesn't appear to have any idea how to use it. Too prone to catching with hands and does not dictate reps. Will bail out of poor contact reps by extending and riding defenders out of vicinity.

Balance: Lack of core strength and inability to keep the feet tethered to the ground result in a lot of reps where he is hinged in place, spinning off of blocks and providing a direct pathway to the football for defenders.

Hand Technique: Hands are often late to punch and arrive outside the numbers. Underwhelming effort to punch and play with aggression, stemming directly from poor usage of hands and failure to optimize ideal length for the position.

Power at POA: Does not illustrate baseline strength required to play in the NFL. Frame is light and lean, paired with poor usage of hands and inability to unlock the hips and roll through contact.

Football Intelligence: Flashes of fundamentals are countered with consistent lapses in execution after contact. Shows promise from athleticism and initial effort perspectives but NFL will eat him alive unless he's able to totally overhaul his efforts after first contact.

Functional Athleticism: Has the look of a good natural athlete, but functional skills are a different story. Robs self of good mobility and foot cadence with poor angles. Has strong foundation to build upon.

Anchor Ability: Hip drop is in need of work, does not roll hips into contact and instead arrives at the block upright and unable to recover or bend. Core strength is a huge problem as well, does not have needed strength to cover up for poorly timed punches.

Flexibility: Hips are carried high at all times, an issue that shows up when trying to anchor in pass pro, redirect when engaged, roll through contact and collapse the LOS in drive block situations or when trying to peel back and pick up a shooting defender through a gap.

Competitive Toughness: Plays soft. Does not run the feet on contact and failures in technique across multiple levels cause issues with functional strength and ability to sustain blocks.

## FILM ASSESSMENT

Games watched: Notre Dame (2016), Hawaii (2017), Boise State (2017), Washington State (2017)

Football Intelligence: Long time starter who has a terrific
dedication to a strong posture and good core recruitment, dedication to a strong posture and good core recruitment, consistently in a position of power. Body control translates to positioning at the POA as well. Sees shooting gap defenders at the LOS very well.

Anchor Ability: Occasionally guilty of taking a false step on first impact, splitting the feet and opening door for a collapsed shoulder. Natural strength and leverage with hip drop is strong, will absorb interior bull rushes effectively with lower body sink.

Hand Technique: Has big mitts that are quick to reload and look to shoot a second punch if no grip is established. Ability to transition and re-land hands in short time while on the move is effective in turning out and uprooting defenders.

Balance: Can play a little too wild at times thanks to quickness and athletic ability, needs to hold water just a bit to prevent overrunning blocking landmarks. Framing of blocks and foot activity is very strong to hold steady and sustain after contact.

Functional Athleticism: Shows good mobility to climb the ladder and combo block. Foot activity is terrific after contact to stay engaged on a block. Moves well in space, although can improve patience in space prior to first contact with defenders.

Pass Sets: Starter at Left Tackle and could feasibly start there in a pinch. Feet are light and active but steps do not cover a notable amount of space to protect the edge. Has a habit of crossing over the feet and chasing when pressured with speed off the edge.

Flexibility: A bit boxy with frame, will move best with the hips and shoulders aligned together. That said, offers great hip roll in linear contact to blow up defensive linemen and shows great lower body mobility to catch with the foot and bow the back to absorb power.

Power at POA: Is an absolute dog at the POA. Ability to run the feet, keep a wide base and stay framed on defensive linemen yields great results in establishing push and creating creases at the line. Natural strength paired with athletic ability is a potent mix.

Length/Extension: Area of influence as a blocker in lateral situations allows for a clean advantage at first strike, will punch, reload and throw again as defenders attempt to work into adjacent gaps.

Competitive Toughness: Tenacious, relentless blocker once able to establish forward push. Has routinely walked defenders out of the picture and continues to fight with the hands for favorable fittings. Has good natural strength and stocky build.

## FILM ASSESSMENT

Games watched: Ohio State (2016), Alabama (2017), Virginia Tech (2017), Auburn (2017), Syracuse (2017)

Functional Athleticism: Does not illustrate high levels of lateral mobility, foot activity or nimbleness in space as a means of mirroring defenders away from the line of scrimmage. Is a surprisingly strong puller, takes clean angles and accelerates quickly.

Football Intelligence: Has good patience at the line to hold ground and stay in position if left unoccupied. Has good awareness of blitzers and stunt work at the LOS, peripheral vision is effective.

Anchor Ability: Natural strength is supplemented by a strong, squatty frame. Plays with natural leverage but mistimed hands and deeper drops can result in collapsed pockets at times. Will handle second level defenders with ease.

Hand Technique: Sustainability of blocks is limited by poor ability to create a firm and clean hand fit on defenders. Punch is good and often shows timing to make the most of wingspan as a way of creating first contact. Hand activity after first punch needs more intent to sink in a grasp.

Balance: Struggles when moving laterally or conceding too much space to re-collect. Defenders able to jolt the pads will win the rep. When playing with established feet will make the most of strong, thick base to stand in firm and stay square.

Pass Sets: Is best in short sets. When tasked with taking depth will get caught with weight distribution back on heels and absorb contact and be collapsed. Snap sets and quick sets allow for established base and sustainability of a deep pocket.

Flexibility: Has a fair amount of looseness. Is able to roll hips through contact and start momentum with the feet to drive off the line. Has good hinge to get width as a puller. Recovery balance is negated by ability to drop a foot to catch base after absorbing a punch.

Power at POA: Grinder in the run game, effective in head up situations to create push and make gaps. Foot speed can temper ability to finish after initial push but often shoots out of stance to reset the line of scrimmage and establish space.

Length/Extension: Has requisite arm length to play effectively and with good timing should have no problems getting popped before strike lands on opposition. Needs to improve ability to play with strength and confidence with hands away from chest.

Competitive Toughness: Would like to see a bit better intent to work down the field on quick hitting plays to help potentially pick off flow and spring a big play. Effort on interior runs is strong to prolong blocks for as long as possible.

## FILM ASSESSMENT

Games watched: Alabama (2016), Missouri (2016), Mississippi (2016), Sam Houston State (2017)

Functional Athleticism: Effective in releasing in straight line situations. Very sudden with initial burst out of stance, overwhelming many defensive linemen in the process. Lateral mobility is modest and restricted by foot speed and hip hinge.

Football Intelligence: Skills as a combo blocker are very strong. Shows good awareness of body position to slide and slam door shut on inside gap before peeling off and picking up a second defender. Mauling mentality can be counterproductive and waste steps in some instances.

Anchor Ability: Strong as hell. Love the way hands sink in tight and absorb a power rush when tested with bull rushes. Has very powerful upper and lower half, offering clean ability to corral a heavy handed rush and sit down to prevent conceding extra space.

Hand Technique: Hands are powerful not just with punch but with grip. If isolated in space and mistime punches and lunge at a target, but issues would be mitigated if moved inside for full time usage as a Guard.

Balance: Can play a bit top heavy in stretches and can have issues with keeping weight back on the heels to stay patient and not chase the block. When upright on heels offers a terrific base of support and can hold firm while bowing the back to anchor.

Pass Sets: Was restricted at LSU while playing as an offensive tackle. Struggled with speed and trying to gain depth with pass set. Projects much more clean inside, where anchor and power are more accentuated and he will be less stressed to find depth in pass sets.

Flexibility: Tightly wound, works as a singular plane blocker. Will not open favorably and would be limited as a puller due to tightness trying to get lower body aligned to the LOS. Struggles to disassociate each half of the body to keep landmarks and gain more speed as a player.

Power at POA: Blows the doors off of gaps when uncovered or stepping down into a gap as a drive blocker. Lower body power and a potent punch yield great results and can often times be found working over defensive linemen $5+$ yards off the of the LOS.

Length/Extension: Does not showcase a notable wingspan. Short, compact punch but offers tremendous power in short space to stonewall rushers if able to keep strike zone aligned. Torques to turn out defenders with hands but has issues working hips across to finish with lack of separation.

Competitive Toughness: Nasty, nasty dude. Will overwhelm defenders who are late to throw the hands and has gone out of way to bury defenders who have lost footing or are on the way down to the turf.

- Short Shuttle: OG Combine Avg. (03-16):
4.83
OG Cole

Pass Sets: Shows a dynamic and fluid base. Has success with sustaining width through the ground up and able to slide and step with pass rushers in the pocket. Does need to find center and play with more control of body.

Flexibility: Has a lot of hip and torso flexion capability, can peel open out of stance as a puller or bend back late against momentum to pick off a shooting blocker into the LOS. Has great mobility through the lower half to play with suddenness and redirection ability.

Power at POA: Despite a lean frame, packs a nice punch when playing forward thanks to explosiveness and movement skills to generate a lot of momentum early on in reps. Has uprooted one on one assignments when catching defenders flush with the hands.

Length/Extension: Does not illustrate the desirable length to play flexed outside despite sparing experience on the outside. Has some inconsistencies with first punch due to wildness of body.

Competitive Toughness: Impressive quickness and twitch as an athlete. Has a great motor and good enthusiasm to come out the chute and get after defenders. Relentless approach to continue to press for real estate and play forward with consistency.

## FILM ASSESSMENT

Games watched: Miami FL (2016), Texas State (2017), Idaho (2017), Senior Bowl (2018)

Balance: Shows good ability to double back and pick off defenders trying to cut underneath blocks but would like to see better angles to not test the balance so much. Issues are illustrated on both the first and second level when playing in the open field.

Functional Athleticism: Has good acceleration out of stance and can catch some second level defenders by surprise. Ability to play out in space can actually be a detriment in some instances, as he will overrun some plays with quickness.

Football Intelligence: Highly seasoned college player on the interior but has some needed technical brushing up, although jump from App State to the NFL should provide improvements in coaching and help clean up movement economy.

Anchor Ability: Functional strength is something of a question, was given fits by more powerful interior offensive linemen at Miami and the Senior Bowl. Lean frame, would benefit from continued dedication to weight room and building up the lower half.

Hand Technique: Illustrates some looseness in hands, needs to carry hands in tighter when looking to establish first contact to prevent clapping at shoulders. Hands showcase good strength once established on the breastplate.

## FILM ASSESSMENT

Games watched: Louisville (2016), South Carolina (2017), Florida State (2017), Notre Dame (2017)

Functional Athleticism: Has required lateral mobility to seal a gap in slide protections, but isn't going to move the needle for work on the second level or as a puller. Tight hips and lumbering status in the open field, better off left in the phone booth.

Football Intelligence: Highly seasoned player. Not easily crossed up with bodies twisting or stunting at the POA, will hold ground and pass off as needed. Is still a little too lopsided as a blocker, much more favorable in controlled conditions.

Anchor Ability: Very difficult to collapse, has a terrific base in pass protection with wide feet and naturally thick lower half, operates with a lot of mass tied low to the ground and is difficult to uproot as a result. Can be countered if forced to come across body on inside moves.

Hand Technique: A little aimless in stretches with trying to land, particularly when backing away from the LOS and tasked with playing backwards. Nice natural level of pop to jolt pads.

Balance: Will struggle to move the feet with pass rushers once engaged and can be shed if caught with a well timed counter move or a fleet footed rusher to cross the feet over and create false steps. Stays square when walking defenders off of the LOS and out of the POA.

Pass Sets: Foot speed is not desirable but does show ability to take crisp angles and if protected to a side had length needed to shade and filter rushes. Quick sets create dilemma for interior rushers, who must then force a miss with hands because collapsing is very difficult against heavy base.

Flexibility: Tight in lateral situations, struggles to hinge and open up the hips to get width or out in front of a boundary run. Much more effective when tasked with coiling the hips and running the feet through contact, effective explode through the lower body when tasked with going straight.

Power at POA: Has good ability to transition first strike into forward push, will run the feet on drive blocks. Lack of general quickness will rob of ability to truly convert push into an open gap but will consistently reset the line of scrimmage.

Length/Extension: More length than what one would expect for a player of his stature, an added bonus that alleviates concerns centered around frame and stature. Punch timing could afford some improvement to optimize strikes and negate rushers.

Competitive Toughness: Stout player, but needs to be kept within means. Asking to mirror quickness will reveal some issues that are hard to reconcile, only effective if able to stay established on a square base.

## FILM ASSESSMENT

Functional Athleticism: Fairly stiff through the hips and will labor in efforts to step out of stance and hinge to attack pulls with swiftness. Has a fair level of lateral mobility but loses integrity of posture when taking contact in such situations.

Football Intelligence: Well seasoned starter, plays well within means to avoid overextending frame or taking poor angles to a defender. Has been astute in protection roles to avoid missing assignments. Play against light boxes has been an advantage to winning positioning.

Anchor Ability: Has a fair level of upper body strength but lack of natural leverage in the lower body is problematic due to tightness. Is most effective with a quick set to prevent defenders from building momentum when attacking into the LOS.

Hand Technique: Hands are active, compact and do show a fair level of power. Reset ability is present as well, catches hands tight on the numbers in drive block instances. Does well to feel a defender during stunt pass off and ride out through the gap to prevent slip ups.

Balance: Lateral balance and consistency is not sustained when tasked with pressing quickly, foot quickness is a natural limitation that will betray quick reacting eyes at times.

Pass Sets: Is an effective shallow set pass protector. Has wide frame to occupy a gap. Foot quickness is an issue if tested up the field with burst. Balanced in efforts to pass off defenders against stunts and sees the LOS well.

Flexibility: Uninspiring with ability to disassociate between the hips and pads, is a linear player who is at best playing in straight lines. Hips sit high on feet in shuffle and pass sets, which will compromise ability to drop the hips and anchor vs. power.

Power at POA: Does well when able to fire out of stance and play forward and reset the line. Shows good punch and weight distribution out of stance to ensure momentum is carried forward. Has effective hands to turn out defenders and win needed gaps.

Length/Extension: Lack of length can be problematic, especially if tasked with player a lot of zone concepts. Does not have the extension stills to control defenders at the end of leash with wingspan.

Competitive Toughness: Can get collapsed if taking on bull rushes from powerful opposition and lack of length to strike first with consistency further complicates the matter as a pass protector. Good push up front in one on one drive block situations to create a crease.

## FILM ASSESSMENT

Games watched: Wyoming (2017), Nebraska (2017), Northwestern (2017), Boston College (2017)

Functional Athleticism: Modest lateral mobility, moves better when in sync with teammates than when isolated as a space puller or trying to mirror defenders and control an area. Does not have a lot of dynamic mobility or burst out of stance.

Football Intelligence: Highly seasoned blocker with experience all over the offensive line. Can be a utility piece if needed and used as depth to fill in as needed. Can get lost in space looking for defensive flow and not impact any defenders on a given play.

Anchor Ability: Core strength is not strong. Build is not going to offer much in the way of growth in size, so may be best served as a help player in the middle as compared to drawing a lot of one on one assignments in pass protections.

Hand Technique: Hands do stay active and work hard to stay in control of defenders, won't settle for a poor grasp. If hands are stripped off body of defender will work to reestablish a fit that allows for effective control and keep chest in front of body.

Balance: Gets rolled back with far too much frequency. Plays without a great level of lower body strength and anchor, will let a solid punch from defenders really disrupt base and ability to stay upright.

Pass Sets: Quick setting interior blocker with a poor habit of letting weight roll forward onto the toes. Needs to show more bend to drop the hips and anchor effectively instead of bowing the back to absorb push.

Flexibility: Plays very rigid in the core. Does not show a lot of sink or hip drop to re-anchor once conceding momentum. Has a visible lift in pad level when hinging to try to pull out of stance. Struggles with initial reach of steps out from under the hips.

Power at POA: Effective when tasked with working across the face of blockers and walling or when combo blocking to the second level. Best push comes in lateral outside zone looks, won't offer a lot of pop or push if trying to create a gap and drive off the ball.

Length/Extension: Does not possess a great deal of length but has shown ability to play with hands away from the torso. Will use grip away from the body to hold defenders from scraping laterally and in range to wall off.

Competitive Toughness: Effort level is strong but ability to dictate reps and win with aggression is not present. A pure steer blocker who can use defender momentum to win positioning but if tasked with going toe to toe with powerful interior linemen will be collapsed.

## FILM ASSESSMENT

Games watched: Pittsburgh (2016), Virginia (2016), Pittsburgh (2017), Notre Dame (2017)

Functional Athleticism: Is nimble footed and an able mover to mirror defenders at the LOS. Has mobility in space to break down and challenge 2nd level defenders. Does not illustrate desirable functional strength to pair with movement skills.

Football Intelligence: Two year starter but still has yet to come around on the finer points of the game. Still too linear as a thinker, often times caught chasing defenders in space instead of finding way to needed platform and allowing action to come to him.

Anchor Ability: Requires more core strength. Build is distributed well through the lower half but footwork and poor core strength allow defenders to press straight through and continue unimpeded on too many occurrences.

Hand Technique: Hands are carried too low and often times fails to create needed pop in the hands to put off momentum from opposition. Shows effort and awareness of hands to be able to manipulate and torque the torso of LOS defenders and turn out for a lane.

Balance: Uprooted far too easily. Feet need to play with better cadence and timing to ensure contact transpires with something connected to the ground. Will get lifted and attempt to hop into base but lacks lower body strength to catch once put on heels.

Pass Sets: Feet are overactive and often times out of sync. Will get caught without feet tied to the ground and give up notable space on first contact before being walked back into the lap of the Quarterback.

Flexibility: Has a decent level of hinge through the hips to open and pull out of stance effectively. Gets caught with hips too high in some instances and as a result will lose immediately on contact. Shows good back bend to absorb a push once settled into a hand fit.

Power at POA: Does not deliver a strike with the hands, a primary issue in part due to lacking length. Inability to dictate reps with hands is going to be problematic, would be much better suited to play a ZBS concept and steer defenders with hands while using lateral mobility.

Length/Extension: Notably short arms when consulting the eyeball test. Extension is a problem, consistently gets stacked by LOS defenders and cannot get needed separation to reestablish control when strung out to the boundary.

Competitive Toughness: Play is more finesse than control and power. Would struggle greatly against 1 T and two gap defenders in his responsibility. Needs more weight room growth to foster a chance at playing.

## FILM ASSESSMENT

Games watched: Mississippi (2016), Brigham Young (2017), Mississippi State (2017), Syracuse (2017)

Functional Athleticism: Does not illustrate a lot of notable range of motion as a space blocker, lateral quickness leaves something to be desired and struggles with mirroring against more fleet footed defenders.

Football Intelligence: Ineffective in utilizing angles to win positioning on the second level. Fails to show anticipation for defensive flow and will over-pursue defenders, ending up not getting into contact with anyone at all. Could kick outside in a pinch.

Anchor Ability: Unfavorable results against power blockers, which will be a cause for concern when moving inside against more heavy handed interior rushers. Anatomical build puts ample weight in the trunk but needs to play with a quicker anchor.

Hand Technique: Does not illustrate a great deal of length or effectiveness to stab and land a powerful blows. Has shown a nice snatch and grab on occasion to play into hand of aggressive defenders.

Balance: Plays within means as a blocker, but doesn't test range and as a result will allow defenders to shoot across the face or win favorable gap control instead of trying to run them off and squeeze down the gap. Stiff and struggles to stay under control in lateral redirection reps.

Pass Sets: Takes a good pathway, even when tasked with working outside as a Left Tackle, to sustain needed depth and carry rushers. Will not have to handle same kind of speed that challenged him from the edge and should be an effective short setting interior OL.

Flexibility: Tight through the lower half. Has tightness through the hips and trunk, which poses challenges for gearing down and mirroring. Will struggle some with an anchor due to high hips and is guilty of getting walked into the backfield.

Power at POA: Best push comes when able to chip and climb off of a combo block and onto the second level. Most effective with momentum already built into blocks and able to roll hips through after creating forward push.

Length/Extension: Would not qualify length as a plus trait. Doesn't have a notably large wingspan or area of influence, which has cost some pass protection reps despite being aligned with favorable position with the feet and blocking platform.

Competitive Toughness: Hustle is notable, can be seen working down the field if initial step up onto the second level does not yield any bodies to target. Functional strength and anchor are not in line with build and frame, will need to address a key lack of functional strength.

## FILM ASSESSMENT

Games watched: Boise State (2017), Southern California (2017), Stanford (2017), Washington (2017)

Functional Athleticism: Struggles greatly with playing backwards or laterally out of stance. Size and stiffness are natural constraints and prevent keeping feet set in front of defenders, often times reduced to leaning and lunging after blocks as a result.

Football Intelligence: Spatial awareness is not effective, defenders will push though gaps in vicinity but eyes will not pick up on the potential penetration. Fails to show polish or technique in any individual component of the position.

Anchor Ability: Size and natural strength do play a role in successful pass protections. Is big enough to absorb smaller, more ambitious rushers hoping to collapse the pocket with power. Ultimately, dynamic athletes will generate a collapse due to inability to re-tie the feet to the ground after contact.

Hand Technique: Hands will strike high and wide. Does not align the elbows in tight to create any power through stun punch. Will have difficulty creating more success with placement due to height and natural lack of leverage constraints.

Balance: Fails to play with a collected base, consistently looked "bunched up" trying to get body down onto a competitive pad level. Lack of foot speed is a killer and prevents rerouting or staying mirrored with defenders in one on one situations.

Pass Sets: Wingspan is a plus but overall does not illustrate desirable footwork for manning up in protection. Is consistently utilized in slide protections to protect from getting isolated one on one against pass rushers. Feet will narrow and cannot sustain kick slide due to tightness.

Flexibility: Shows extreme tightness throughout the hips and pelvis. Plays with a high pad level, which handcuffs ability to play with balance and absorb contact. Does not show ability to bend at the knee and produce hip drop to anchor against power rushers, either.

Power at POA: Has trouble staying chest to chest with defenders in the run game. Will need to clean up hand fits to sustain blocks and dictate more at the point of attack. Physically limited in ability to drive the feet and climb the ladder.

Length/Extension: Has very good natural length and can occupy notable amounts of space simply by sliding and extending arm to catch any flow pushing through the line. Sphere of influence will reroute defenders in the run/pass game early on.

Competitive Toughness: Does well to give maximum effort on a snap by snap basis. Play speed isn't great but effort is visible. Plays soft at times due to lack of hand effectiveness and an inability to unload hips into first contact.

| - 7.24: FOURTH ROUND VALUE - |  |  |  |  | ${ }^{\text {st }}$ | $\frac{\text { PRIORITY UDFA }}{}$ |  | ${ }^{6.00-6.24}$ |
|  |  |  |  |  | 0 |  |  | < 5.99 |

Functional Athleticism: Utilized frequently in pulling situations. Does well to flip and get out in front with light feet. Looks comfortable as a lead blocker and running in the open field. Quick to climb to the second level and cut down linebackers.

Football Intelligence: Has an understanding of physical limits, particularly when trying to reach landmarks on the second level. Will take good pursuit angles. Has active eyes to stay busy and not let blitz schemes or stunts force blockers out of position.

Anchor Ability: Is light in the trunk, which allows for power rushers or explosive defenders to drop down and coil through pass sets. Does not have a lot of lower body power to absorb such contact and as a result can be overwhelmed in one on one situations.

Hand Technique: Hands are a bit erratic at times to try to land a first strike. Has had issues with both timing and placement, can let first strike swing wide and neutralize any power in the punch. Nice secondary effort is present to reestablish hand control and get inside.

Balance: Moves nimble and light on feet, as little issues with redirection tasks or playing on the second level. Flexibility and foot activity do allow for a balanced base while engaged but at times will stop the feet and lean into blocks, resulting in a poor finish.

Pass Sets: Ability to come out of stance and set up on quick sets can be neutralized with power. Does well with slide protections to seal and keep gap clean of traffic. Has good balance once feet and hands are established to drop the butt and hold firm.

Flexibility: Illustrates a great level of looseness, particularly through the core and pelvis. Feet can adjust while absorbing contact to re-gain footing without compromising upper body posture or shoulders framing defenders. Does well hinging to get out as a puller.

Power at POA: Gets good movement on double teams and when stepping down into down blocks to wash out interior defenders. Will have more issues with a head up or tilted NT to punch through initial contact and reset the line of scrimmage.

Length/Extension: Does not appear to have notable length or separation skills. Much more effective in a phonebooth and playing in tight spaces as compared to playing as an outside zone blocker due to a lack of length to keep hands fit on defensive linemen.

Competitive Toughness: Is not a true asset in the run game as a drive blocker but holds value and toughness in effort and as a lead blocker out in space. Functional power and strength are not strengths of game.

## FILM ASSESSMENT

## Games watched: Notre Dame (2016), Clemson (2016), South Carolina (2017), Florida State (2017), Louisville (2017)

First Step Explosiveness: Is not a super twitchy athlete but Competitive Toughness: Motor is tremendous. Relentless get off will work just fine at the NFL level. Has good ability to gain ground on first step and pairs above average explosion with snap anticipation to get OTs to hinge prematurely when threatening the edge.

Hand Technique: Really well rounded in terms of hand usage and ability to play off of contact. Will take powerful stab with inside arm and win first contact well; understands how to leverage blockers with length and then disengage and transition into pursuit role.

Pass Rush Counters: Has a vast array of counters. Likes to return to speed rush with dip/rip combination but has understanding of how to work back inside or convert speed to power effectively based on how tackles set him on the boundary.

Flexibility: Showcases textbook lateral tilt as a boundary rusher. Lower body (hips/ankles) are capable of producing high amounts of tilt to carry speed through corners and allow for flattening to the Quarterback. Shows low pad level at the line of scrimmage.

Run Defending: Strength and ability to hold ground while taking on blocks is impressive. Has a strong pop with initial stab to offset forward momentum from blockers and will roll hips through to stonewall and help seal off gaps.
is efforts as a rusher and a run defender; regardless of positioning on the field. Will work back into the pocket after being ridden beyond target. Backside pursuit allows for influence on unblocked reps as well.

Tackling: Consistent finisher as a tackler. Does well even when isolated out in space to not leave feet prematurely. Pads possess a lot of pop and power when crashing down hill as a means of absorbing ball carrier's forward momentum and prevent YAC.

Lateral Mobility: Is not especially sudden but has enough mobility through the hips to get width when challenged on outside runs and extend ball carrier into the boundary. Has much better short area quickness to fold back inside on an interior gap as a forward playing pass rusher.

Stand Up Ability: Would not recommend utilization outside the box; doesn't have a lot of dynamic movement skills isolated in space. Pass rush/edge setting prowess could be engaged from a two point stance without negative effect, however.

Football Intelligence: Attacks pass rushes with a plan; always has a counter ready for multiple avenues. Is not a player who will get caught cheating or banking on a single counter. Does well to execute team defense first before transitioning into pursuit mode.

## Kyle Crabbs 2018 NFL Draft Report <br> Harold Landry, EDGE Defender \#7

158 total tackles, 26.0 sacks, 48.0 tackles for loss (TFL)

Games watched: Clemson (2016), Wake Forest (2016), Virginia Tech (2017), Clemson (2017), Notre Dame (2017)

First Step Explosiveness: Extremely potent as a speed rusher off the boundary. Capable of winning tight alignments with hard up field step or with tilted speed angles to crash and play with tilt through a wider alignment. Elite burst and twitch.

Hand Technique: Highly effective in playing with an extended arm or chopping through an initial punch as a pass rusher. Effective setting hands on inside of numbers against blockers to play with leverage and control when trying to stack blocks. Optimizes length well to stay clean.

Pass Rush Counters: Primarily a speed rusher. Able to time inside shoulder and diminish surface area with high aptitude. Rip and inside counters with arm over are effective when paired with speed to catch oversetting OTs off balance.

Flexibility: Fluid, showing impressive tilt and mobility throughout the entire body. Is one of the best cornering pass rushers in recent years. High ankle flexion, extremely steep lower body angles when turning the corner on OTs with speed. Gets skinny prior to first punch with torso mobility.

Run Defending: Inside out defender. Will be most effective as a wide aligned DE or as a stand up defender playing outside leverage at the LOS. Ability to hold ground against drive blocks in the trenches is underrated, but not a featured trait.

Competitive Toughness: Plays with a better presence at the LOS than athletic skill set would suggest. Has ability to hold ground thanks to low center of gravity. Motor as a pass rusher is notable and will bring second efforts back into position to challenge the football.

Tackling: Closing burst is notable to flatten and get into favorable position as a backside defender. Speed to close will catch ball carriers off guard. Does well to consistently go for a wrap up effort, isn't looking for kill shots against the run. Aware of attacking ball as a pass rusher.

Lateral Mobility: Terrific range when tasked with staying square to the LOS as an unblocked defender. Very quick to squeeze down and stay patient reading mesh point. Capable of planting foot in the ground and driving back into the boundary to sustain outside leverage.

Stand Up Ability: Has the needed looseness in the hips to buzz off of the LOS as a zone dropper in coverage. Short area COD and acceleration would enable skill in pursuing plays from the back side as a rally defender to the ball. Can sustain burst from two point stance.

Football Intelligence: Ability to locate the football and sustain primarily responsibility after the snap is strong. Has a terrific sense as a pass rusher for how to get OTs off of balanced set and come back with counters to create consistent pressure.

## FILM ASSESSMENT

Games watched: Wisconsin (2016), Louisville (2016), Mississippi State (2017), Auburn (2017), Florida (2017), Alabama (2017)

First Step Explosiveness: Has a splendid level of twitch and burst off of the line of scrimmage when releasing into a full tilt pass rush. Dynamic movement skills extend to working in space as an isolated defender as well. Gains notable ground with first step.

Hand Technique: Is quite developed with ability to stack up and attack blockers. Has firm enough punch and long enough arms to jolt and extend on skill players at OTs alike. Good usage of free hand to rip blocker's grasp off of chest plate.

Pass Rush Counters: Go to is a sweep and rip combination, when paired with tilt and first step can be very potent rushing off the edge. Has broken out long arm rush and a spin move that covers notable ground when working back inside.

Flexibility: Shows terrific tilt and lean both through the lower half and whilst flattening on offensive tackles. Will pivot and corner with high rate of speed and flexibility allows for catch foot to suddenly shift weight at steep angles to get home.

Run Defending: Lapses of gap responsibility come on occasion. Is a reliable boundary defender to play the mesh point in zone read, has movement and length to account for either player. Anchor and commitment to set the edge are present on film.

Competitive Toughness: Combative with urgency and hustle as both a backside and play side defender. Shows surprising anchor at the POA to hold ground with low hips and set the LOS in the run game. Second effort pass rushes produce clean up plays thanks to athleticism and length.

Tackling: Influence is terrific. Length, burst and bend result in some challenges a lesser player wouldn't dream of. Possesses powerful pop in pads with given an angle to finish flush with the passer. Explosiveness translates to lateral tackles as well.

Lateral Mobility: Terrific range. Flows effortlessly into the boundary and carries frame well to do so with the needed speed to carry the RB into the boundary. Hips are loose and has little effort hinging to open up in zone coverage drops as well.

Stand Up Ability: Successfully mirrored RBs and slot receivers in tight areas of the field. Surreal athletic ability and flexibility of the hips in space to shadow smaller players. Burst out of two point wide alignment is strong as well to still challenge with speed.

Football Intelligence: Utilization of advanced hand usage and commitment to fundamentals at the LOS are an impressive added layer over dominating traits. Has good spatial awareness to feel way through and around contact.

## FILM ASSESSMENT

Games watched: Clemson (2016), Michigan (2016), Alabama (2017), Florida (2017), Syracuse (2017)

First Step Explosiveness: Has natural burst to coil and explode out of stance. Will cover a good deal of ground with first step up the field, can win as a wide angled speed rusher on the boundary. Can improve burst with adjustments to stance (uses 4 pt . stance at times).

Hand Technique: Hands are very rapid in tight quarters to play off of contact. Length is a functional issue, fails to show desirable extension and skill in discarding blockers after initial contact. First contact counters and judo style shedding techniques are top notch.

Pass Rush Counters: Is fairly one dimensional as a speed rusher. Favors rip/speed rush combination disproportionately and as a result can be negated by OTs who sit on the speed move. Will need to develop versatility to keep opposition honest.

Flexibility: Notably loose through the shoulders. Intriguing ability to rotate the shoulders through gaps to keep OTs from getting hands on the chest and sustaining speed while pressing forward. Rolls hips through punch to hold ground. Has nice lower body tilt rushing off the edge.

Run Defending: Functional strength is good, not great. Will have hands full trying to pull off of blocks from an in line defense position but capable of setting the LOS and holding ground firm. Capable single gap defender to shoot through and challenge the mesh point with quickness.

Competitive Toughness: Surprisingly scrappy on the line of scrimmage to hold ground and prevent bubbling for ball carrier to slip out into space. Effort and back side pursuit are excellent, will peel back if missing landmark and successfully get in on plays.

Tackling: Very sudden, closes like a linebacker would to find the ball and finish if left uncovered. Has good patience along the LOS to not lunge body into a potential tackle. Explosive skill set translates to pop through the pads.

Lateral Mobility: Free flowing defender who has no problem ranging all over the field and up and down the LOS. Flexibility through the hips allows for suddenness in tight spaces to flip open and attack a ball carrier pressing for the edge.

Stand Up Ability: Movement skills suggest a feasible transition into a stand up role with some regularity. Has needed hip mobility to drop off of the LOS and get depth if tasked with buzzing into shallow zones. Has not been asked to fulfill this role, so patience likely required.

Football Intelligence: Stays true to strengths, plays with speed and plays to avoid contact. Would like to see more variability to pass rush approach to great more opportunities to register disruptions against opposing QBs.

## FILM ASSESSMENT

Games watched: Clemson (2016), Oklahoma (2017), Pennsylvania State (2017), Michigan (2017), Wisconsin (2017), Southern California (2017)

First Step Explosiveness: Has nice release and acceleration, particularly out of a three point stance. Has ability to gain advantageous angles early from a tight split on the edge. Has ability to explode off the back side or challenge the mesh point if left unaccounted for.

Hand Technique: Hands are deliberate. Takes a calculated and stiff strike onto chest of blockers to initially and has various moves in arsenal to shed clear hands off of frame. Utilizes long arm well to extend and sustain boundary leverage.

Pass Rush Counters: Preferred counters are push/pull and swim moves. Has ability to tilt and rip under a punch off the outside but consistency is hindered by ineffective angles rushing off the edge. Can win with speed with greater consistency if able to develop trust in cornering skills.

Flexibility: Has fair amount of tilt, but flashes are sporadic and irregular. Pliability is more visible when out in space, hinging hips for zone drops or when working on the move to avoid bodies and blockers. Very free moving lower half. Upside is present as boundary burst rusher.

Run Defending: Will miss some finishes by failing to cleanly get rid of blockers on chest. Awareness of body positioning on the edge and slashing potential to cut inside on gap slants is strong, will produce disruption at the mesh point.

Competitive Toughness: At times can get bullied and pushed around by blockers at the LOS. Struggles to finish some disengages when body isn't aligned into blocker. Has an outstanding motor, great hustle player who makes second and third effort plays.

Tackling: Pliable upper half helps to maximize tackle radius and ability to influence at the LOS. Is not overly powerful or explosive to run through contact and as a result will occasionally slip off of a finishing play or slide low and miss a chance to finish.

Lateral Mobility: Has terrific range, hips are clean. Notable acceleration when tasked with flipping open 90 degrees and opening into the sideline to sustain leverage on outside runs. Has fair short area quickness on interior rushes but proceeds with caution around contact.

Stand Up Ability: Has been utilized in zone drops and shows ample movement skill to be used in that same role at the next level. Loses some of acceleration on pass rushes when tasked with starting from a 2 pt . stance.

Football Intelligence: Has much more polish with hands than with lower half. Can vastly improve results by cutting down angles when working off the edge on obvious passing downs and force Tackles to greet hips sooner into pass sets.

## FILM ASSESSMENT

Games watched: Texas $A \& M$ (2016), Baylor (2017), Texas State (2017), Louisiana Tech (2017)

First Step Explosiveness: Has a fair amount of burst to get up the field and cause penetration as a rusher. Will make good use of wide angles and tilted alignment to get pressure as a speed rusher before converting speed to power.

Hand Technique: Length is easily best trait. Possesses a good deal of power to coil and explode hands into blockers, will often establish first contact and soften angles by locking out arms on the play. Usage when trying to shed blocks will need more aggression and precision.

Pass Rush Counters: Will need more polish, currently attempts to play with speed to power or pushing through creases without much creativity. Will be eliminated from rushes after giving up chest if unable to create a bull rush push backwards.

Flexibility: Does well to minimize disadvantages of height with bend in the knees and drop of the hips. Can still get caught playing tall at the line of scrimmage while stacking blocks. Has modest cornering ability but won't dip inside shoulder on boundary rushes due to lack of tilt.

Run Defending: Length is a huge tool but will need development. Does not have great anchor at the point of attack but power in hands will help to reset LOS and establish control. Has good penetration skills and crashes through gaps hard to find the football.

Competitive Toughness: Motor and effort level are very strong to work back into the play. Can be found down the field chasing interior runs after pressing up the field. Ability to anchor and hold ground at the POA will need further development by adding weight to frame.

Tackling: Tackle radius is strong. Has good short area quickness and surprising mobility to adjust path in short spaces and challenge the ball carrier. Does well to wrap up ball carriers with strength and prevent additional yardage.

Lateral Mobility: Has good range. Loose through the hips to pivot and adjust feet to get acceleration when mirroring ball carriers in the backfield or at the line of scrimmage.

Stand Up Ability: Has found success as a slasher when used as a stand up chess piece. Does well to release with quickness and find creases in protection when flowing forward. Has consistently done well to create lanes when playing with forward momentum.

Football Intelligence: Has done well to play to strengths and optimize most out of raw athletic ability. Needs to become more reactive with hands as it relates to avoiding first contact. Can have success with long arm rushes and optimizing length to a greater degree.

## FILM ASSESSMENT

## Games watched: Clemson (2017), Florida State (2017), Notre Dame (2017), Boston College (2017), Texas A\&M (2017)

First Step Explosiveness: Does not have a great level of burst to accelerate up field out of stance. Ability to gain ground on steps 2-4 is much better than initial release. Does well to react to the snap when tasked with penetration as compared to reading the LOS.

Hand Technique: Excellent hand usage. Highly polished and does well with transitioning out of blocks with powerful hands and ideal length. Will stack blocks before finding the football and break off hand fits with forearm or hand swipes.

Pass Rush Counters: Highly developed in terms of mental processing, reactive quickness and fluidity of counters. Powerful club, sudden spin move, effective swim and push pull combinations. Is not married to a single counter and parlays contact into multiple sheds with ease.

Flexibility: Is a bit of an odd blend. Doesn't have a lot of cornering ability to tilt through the lower body, yet upper half mobility and looseness throughout the shoulders is effective in forcing missed punches and working frame through small creases.

Run Defending: More successful as a one gap defender in production but ability to sink hips and lock out as a two gap defender is present as well. Ability to quickly shed blocks will allow for effective play along the line of scrimmage and challenging ball carriers.

Competitive Toughness: Very stout when locking horns at the POA in head up situations. Would like to see a greater ability to sit down and prevent being washed out of some plays. Motor runs hot and does well to continuously push the pocket as a rusher.

Tackling: Has a very stout frame and long wingspan to help envelope ball carriers at the line of scrimmage. Effective in tight spaces but when pressed with trying to mirror to the boundary can get caught with tightness in the hips and fail to finish.

Lateral Mobility: Does not do well as a boundary contain defender, particularly when challenged with speed on outside runs. Has short area burst but will not be able to hold the edge against fast to flow runners or when protecting the field side.

Stand Up Ability: Should not be asked to play away from the line of scrimmage. Has tightness that will prevent drops in zone coverage from having effectiveness and lacks range/ release from a two point stance to win as a rusher.

Football Intelligence: Impressive mental flexibility as a pass rusher. Has ability to implement plans A, B and C on any given play, depending on the set of OL. Awareness of landmarks and how to get rid of blockers is present as well.

## FILM ASSESSMENT

Games watched: Florida (2017), Notre Dame (2017), Auburn (2017), Mississippi State (2017), Tennessee (2017)

First Step Explosiveness: Actual release off the line is notable. Capable of gaining high amount of ground up the field courtesy of length and athleticism. Will be late at times reacting to the snap, so will need to dial into peripheral vision to react more promptly.

Hand Technique: Usage has improved, shows greater awareness of maximizing length and causing separation. Will need to continue to develop shedding techniques, can get stuck locking horns without a firm press or sweep to disengage at the point of attack.

Pass Rush Counters: Usage of long arm, rip and dip and speed rush have given added versatility and effectiveness. Is currently best working from wide angles, as first step stresses OT and widens isolation before counters are implemented.

Flexibility: Level of tilt is strong throughout the body, when flattening around the edge gets a high degree of lean through the lower half and will extend torso and inside arm to the target to close down angles. Hips are free to allow a clean drop off the line of scrimmage as well.

Run Defending: Still gets stuck on blockers trying to disengage and challenge the ball carrier. Can be collapsed in drive block situations and needs to anchor better to reset the LOS and box in the corner. Slash reps crashing off the back side can be contested.

Competitive Toughness: Has a good motor, makes the most of versatility by being moved all around the line of scrimmage and will execute promptly in any role. Functional play strength is markedly better than 2016 but still can use improvements.

Tackling: Tackle radius is freakishly large. Has a lot of length and a lot of closing burst to cover ground. Does well to mirror with loose hips when playing on the edge and sustain edge contain. Attacks the ball when closing in on passers in the pocket.

Lateral Mobility: Has good flow and range, both as an off ball defender from the backside and working as an outside contain defender on the play side. Hips are fluid and easily enable flipping into the boundary to carry speed and stay outside on ball carriers.

Stand Up Ability: Is a highly versatile athlete. Has been tasked with playing off the ball, with hand in the dirt, tilted from a two point stance at the line and jamming receivers working out of the slot. Has even been given reps as a stand up rusher on interior gaps. Chess piece.

Football Intelligence: Handles a good deal of responsibility as a move piece throughout the front seven. Is still developing a natural feel to pass rushing and will require some patience there before able to fully deliver on his potential.

## FILM ASSESSMENT

Games watched: Pennsylvania State (2016), Clemson (2016), Indiana (2017), Oklahoma (2017), Pennsylvania State (2017), Wisconsin (2017)

First Step Explosiveness: Does not showcase anything other than average burst out of three point stance, even on obvious passing situations. More build-up speed than instant explosion. Can beat college level OTs with wider angled speed rushes but won't be avenue for success in NFL.

Hand Technique: Deliberate usage to initiate first contact with offensive linemen. Shows patience when stacking blocks, illustrating confidence to shed blocks at will and discard opponents. Length is serviceable to play outside contain or potentially two gap.

Pass Rush Counters: Is not overly imaginative or creative to play off of first contact. More apt to utilize strength as a bull rusher than to use hands to force a missed punch from an offensive tackle.

Flexibility: Struggles with turning the corner as a pass rusher to drop pads and center of gravity to push through a tight angle. Has little ankle/lower body flexion to carry speed through wider angled rushes and force the feet to stick in ground to turn.

Run Defending: Can be a terrific specialist with squatting to hold ground as a contain/gap defender. Has functional strength to push through lateral contact on slants and sit down in the backfield to find the ball. Hand usage is terrific at the POA.

Competitive Toughness: Relentless effort player. Does well to make second and third efforts to peel back into the pocket if QB holds ball for an extended period of time. Has good functional strength and plays with confidence as a POA defender.

Tackling: Area of influence is modest due to athletic profile but discipline as a finisher is strong and rarely lets ball carriers slip through grasp. Strong in both the upper and lower halves to put down runners.

Lateral Mobility: Doesn't have a very prominent burst. Looks rigid trying to string out plays and stay in front of boundary runs working as a contain defender. Much more effective in straight lines or from a wide angle where leverage is already provided.

Stand Up Ability: Will not offer a team much of anything as a defender out in space. Needs to be played on the line of scrimmage and more importantly with a hand in the dirt to help get the most out of initial burst out of stance to win reps early.

Football Intelligence: Would like to see some more versatility added to hand counters as a pass rusher but style of play is very much as a grinder. Likes to physically impose will on blockers and play style/approach to the game stays true to strengths.

## FILM ASSESSMENT

Games watched: Oklahoma (2017), South Florida (2017), Tulsa (2017)

First Step Explosiveness: Has a pleasant first step, will spring out of stance and quickly find way into a hip to hip position against OTs. Has found success in a multitude of alignments but ground covered in first step would be effective from outside alignment.

Hand Technique: Extension and length are effective, has ability to press and extend to create a crease and enable for block disengagement when working laterally at the line of scrimmage.

Pass Rush Counters: Has successfully implemented length as a way to keep chest clean and transition to the passer. Does not have a great deal of power behind frame due to lean frame and a lack lower body strength.

Flexibility: Has nice lean, especially when working off the edge. Has ability to optimize length and tilt into rushes effectively, diminishing surface area for OTs to land punches or strike on the body. Needs to get the hips down when challenging OTs in line, however.

Run Defending: Has some gap penetration skill but by and large consistently to shed blocks with hands creates some challenges to finding production at the LOS. More gap contain as compared to block shedding.

Competitive Toughness: Gets knocked around with too much frequency, plays high and times and struggles greatly to get the pads down at the POA and anchor effectively. Does not possess a lot of power in the hands to displace OTs in their set.

Tackling: High tackle radius thanks to prototypical length and solid functional athleticism. Tackle power is not great but shows good habits as a wrap up tackler to wrangle the ball and finish opportunities to end a play. Shows good press into final angle as a rusher off the edge.

Lateral Mobility: Athletic ability is strong but laterally can be a touch slower than when working in straight line angles. Steps are long and hips are not especially fluid so will have a harder time pivoting to get width out of stance and into pursuit into the boundary.

Stand Up Ability: Has a good deal of upside as an outside-in rusher. Length is useful from an outside alignment to confidently set the edge in the run game. Needs advantageous angles to win consistently in the run game due to strength at the POA.

Football Intelligence: Has illustrated required skills to be successful defending the edge but needs to harness more consistency in all phases. Hope is that with next level coaching upside will be more prevalent and additional growth can take place.

## FILM ASSESSMENT

## Games watched: Southern California (2017), Washington (2017), Oregon (2017), Michigan State (2017)

First Step Explosiveness: Has terrific release off the snap, very smooth when exploding out of 3 point stance and covers a notable amount of ground on initial step.
Quickness translates to stunt work, pure gap penetration and will be effective off the edge as well.

Hand Technique: Showcases a subtle rip to finish penetration reps, but often times gets caught with hands placed wide and out of position trying to stack up blockers in heavy traffic. Needs to become more developed to stack and shuck at the POA.

Pass Rush Counters: Is predominantly a speed rusher, wins reps with quickness and explosive first step but hasn't often been tasked with rushing from outside angles. Ability to pick up new landmarks and showcase pass rush counters will be instrumental to transition.

Flexibility: Looks to corner well. Experience with inside alignments has developed good habits trying to work around bodies in tight space, a trait that should translate well to new role as an outside rusher. Has good disassociation between upper and lower halves to get skinny in gaps.

Run Defending: Gap penetration player only. Requires notable overhaul to set the edge due to inexperience and ineffectiveness taking on blockers from an inline position along the POA. Big production winning with quickness comes from inside alignments.

Competitive Toughness: Currently finds all production strictly on ability to press into gaps and uncover before looking to locate the ball. Does not handle firm contact well and needs to develop some consistent hand counters to discard of blockers and prevent being washed out.

Tackling: Initial explosiveness translates very well to hitting power, carries speed with grace and plays with confidence pressing into the mesh point for some violent collisions in the backfield. Has a notable wingspan to reach and maximize area of influence.

Lateral Mobility: Has awesome range and ability to press gaps as a slant defender. Burst translates to lateral game as well, has ability to suddenly cross the face of blockers and uncover at desired landmark.

Stand Up Ability: Projection is murky due to non-traditional role at the college level. Looks to have lateral range and burst to win as a stand up rusher on the outside, but needs to be played going forward to unlock potential and maximize skillset.

Football Intelligence: Has a ways to go as it relates to adjusting to new role but has made visible effort to execute on designated responsibilities. Works to uncover in desired gap before flipping eyes back inside to locate the football.

## FILM ASSESSMENT

## Games watched: Washington (2017), Ohio State (2017), Michigan (2017), Pennsylvania State (2017), Michigan State (2017)

First Step Explosiveness: Has a nice initial get off at the line of scrimmage. Length as a rusher enables ability go gain notable ground with initial stride and challenge heavy footed offensive tackles hip to hip as a boundary pass rusher.

Hand Technique: Showcases a surprising level of versatility and effectiveness in hand counters as a rusher. Hand punch and sweep is compact, sudden and effective. Understands how to attack at the wrist in order to break hands on first punch. Struggles to stack in the run game.

Pass Rush Counters: Most effective counters are sweeps, rips, long arm stabs and clubs. Will have a difficult time disengaging after conceding chest, often times eliminated from play after a clean hand grasp is given.

Flexibility: Has a great level of bend and tilt throughout the hips and torso. Cornering ability is present but can at times misstep with the catch foot and lose footing, will be ridden out of plays or buried on the spot as an end result. Does well to bend frame and coil into initial stance.

Run Defending: Too easily erased in head up situations. Can be collapsed and washed out of the play by Tight Ends with far too much ease. Will allow pad level to rise up and give up anchor trying to locate the football in the backfield while engaged.

Competitive Toughness: Admirable effort throughout college career to play through lingering injuries. Does not have functional play strength to hold ground at the line of scrimmage, will get uprooted in the run game and fail to effectively set the edge.

Tackling: Far too prone to leaving feet and throwing limbs at the ground. Needs to stay upright and balanced with a greater consistency in order to increase finish frequency. Has a long wingspan to wrap up and corral ball carriers when collapsing down the LOS.

Lateral Mobility: Short area quickness is impressive, has ability to come to a stop and work back inside when challenging offensive linemen from wide angles. Has ability to tuck back across face of a blocker when attacking in a head up position on interior gaps.

Stand Up Ability: Tasked with dropping out into flats in zone coverage or picking up backs out of the backfield, even turning and running to carry plays down the field. Has effective burst from a two point stance, can challenge the pocket or drop off the LOS from upright position.

Football Intelligence: Has flashes of applicable skill but is still fairly rough around the edges. Would have had notably better statistics if able to clean up extra steps, angles and tackling habits.

## FILM ASSESSMENT

Games watched: Oklahoma (2016), West Virginia (2017), Texas Christian (2017), Oklahoma State (2017), Iowa State (2017)

First Step Explosiveness: Possesses a good initial get off out of three point stance but doesn't consistently showcase natural athleticism and burst. Instead often times reacts to blockers before releasing and as a result isn't consistently able to press into gaps as a penetration player.

Hand Technique: Offers very little power with punch to set tone of first contact, as a result plays soft and timid and will not show ability to reset the LOS on a down by down basis. Flashes of good extension and ability to stack with upper body power but disengagement needs work.

Pass Rush Counters: Has very little coordination in pass rush counters, doesn't approach rushes with any notable plan of attack and often times as a result will simply press up the field and look for the corner against a soft edge or try to spin back inside late.

Flexibility: Hip mobility shows on boundary rushes, is at best when able to pivot the hips hard at the top of pass rush track and get back down into the QB's platform from behind. Has a fair pad level and plays under the pads of opposition when tasked with stacking up blocks at the LOS.

Run Defending: Can play with leverage when disciplined to keep hips bent and extend out on blockers. Ability to get off of contact poses issues when trying to challenge ball carriers tucking up into immediate vicinity and when still on a block.

Competitive Toughness: Is ineffective with ability to disengage blockers when giving up the chest. Can get swallowed and pushed around at the point of attack when trying to scrape laterally and get off of blocks. Effort down the field is admirable as a pursuit player.

Tackling: Good closing burst to the football on occasions afforded to play aggressively into the mesh point. Has a good wingspan to reach and challenge the ball away from the body. Has a good pop when able to align the hips and pads.

Lateral Mobility: Has movement skills to flip and unlock hips to get out of the POA on boundary challenges. Has good squeeze down when isolated on the boundary against zone reads and forced to crash down and challenge a ball carrier.

Stand Up Ability: Has been used in some sparing reps off the ball, both as a blitzer and a second level defender. Surprisingly calm away from the LOS, showing some promise as a moveable piece if boundary rush skills and hand technique does not develop.

Football Intelligence: Has a long ways to go as it related to mental processing, play recognition and the technical side of the position. Has failed to show developments in playing away from contact and winning out in space, which is highly concerning.

## FILM ASSESSMENT

Games watched: UCLA (2015), Brigham Young (2017), Arizona (2017), West Virginia (2017)

First Step Explosiveness: Has a notable first step on obvious passing situations to coil and accelerate through steps 2-5 on the boundary. Has pure speed needed to effectively win as a speed rusher from tight alignments and overwhelm OTs.

Hand Technique: Has good awareness when addressing blockers to gain an inside fit and keep the arms extended to keep chest clear. Has strength to pull blockers off of set and has a visible effort to rip off of hands when trying to disengage laterally.

Pass Rush Counters: Has not offered a lot of in game first contact counters, although showed more versatility and promise at the Senior Bowl. Key will be unlocking ability to work back inside into regular rotation and approach rushes with a game plan.

Flexibility: Has a modest level of tilt and lean. Wins with surface reduction, although that is more from folding from the waist than tilting lower body to lean into cornering. Has some key ankle flexion to peel back to the passer on steep angles after missing initial landmark.

Run Defending: Sturdy anchor at the point of attack to wall off blockers and keep gap integrity, although can be guilty of being uprooted and knocked off balance and lose footing in tight spaces. Shows good motor to pursue the football.

Competitive Toughness: Has battled injuries through each of the past two seasons but showed good desire to play in bowl game vs. WVU. Has a stout anchor and is capable of locking up at the point of attack and holding ground to sustain gap integrity.

Tackling: Needs to be more patient to come to balance and square up in the open field. Has good closing burst and can deliver a jarring hit if given the free run at the passer. Squeezes quickly and effectively on the edge to wrap up and get arms around a ball carrier.

Lateral Mobility: Has smooth step to close ground if challenged with inside runs. Shows good hip mobility in select reps when tasked with bailing away from the LOS. Has the speed off the edge to crash hard and chase down plays off the backside.

Stand Up Ability: Has been called upon to play a spy role from the 2nd level with success. Ability to buzz out of an up alignment in the pre-snap and get to a shallow zone is present and likable as well.

Football Intelligence: Embattled veteran with more game experience and polish than production would suggest. Has often times been tasked with unglamorous gap control instead of being given the green light to crash and explode into the POA.

# Joe Ostman, EDGE Defender \#45 

## PRODUCTION SUMMARY

220 total tackles, $\mathbf{2 6 . 0}$ sacks, $\mathbf{4 5 . 5}$ tackles for loss (TFL)

## FILM ASSESSMENT

Games watched: Oklahoma State (2016), Boston College (2017), Ball State (2017), Wyoming (2017)

First Step Explosiveness: Does not illustrate a great deal of acceleration out of any stance, can be guilty of false stepping in place to gather momentum when working from wider alignments. Steady paced rusher that won't get hip to hip with great consistency.

Hand Technique: Very developed hands. Has implemented swim move with great consistency, able to stay compact with swim, not give up chest and force false punches from would be blockers. Is more of a gap penetration defender than someone to will stack and shed due to length issues.

Pass Rush Counters: Has won with rip, swim, inside counter, club and power rushes. Quick to step beyond the outside heel of blockers and gain leverage when trying to turn the corner and flatten on the outside. Effective at diminishing surface area and slipping a punch.

Flexibility: Has only mild amount of tilt through the lower body but does have great upper body/torso mobility to twist and slip gaps. Very effective in getting skinny and uncovering through tight gaps to challenge the football at the point of attack.

Run Defending: Has been very slippery and effective playing into the teeth of the run. Redirects well coming off of contact to mirror and challenge the ball carrier. Functional strength is not great and can get stacked up if caught without a gap to shoot.

Competitive Toughness: Terrific motor and pursuit skills. Utilizes stocky build and height at the LOS with success, able to hold up the POA effectively. Violent finishes at the quarterback to attack the football and create jarring hits and turnovers.

Tackling: Great finisher. Has a nose for the football and will finish off hits by jarring loose the ball ( 8 career forced fumbles). Lack of length can be problematic if tested out in space against strong athletes, however.

Lateral Mobility: Has modest lateral range, but is patient in unblocked situations to stay square and provide a chance to challenge the play. Does not have great long speed and can be tested into the boundary if caught flat footed or if stuck on a block.

Stand Up Ability: Does not have any notable burst or acceleration off the edge, but can be effective setting the edge vs. the run in wide alignment. Won't have any value operating out in space as a zone or man coverage option.

Football Intelligence: Highly developed player with a lower ceiling thanks to optimal technique. Has masked physical limitations quite well and as a result has had a profound impact at a smaller school.

## FILM ASSESSMENT

Games watched: Central Florida (2016), Auburn (2016), Nebraska (2017), Georgia Southern (2017), New Mexico State (2017)

First Step Explosiveness: Has a dynamic first step and ability to get up the field with quickness. Will challenge heavy footed OT and is capable of winning immediately off the snap with first charge up the field.

Hand Technique: Hands are present at first contact and shows awareness of need to keep body clean. Does not appear to be overly long and does not play with strength in hands to ensure clean body when playing at the point of attack.

Pass Rush Counters: Has ability to be a handful if isolated one on one on the boundary. Capable rusher when diminishing inside shoulder and playing speed rush. Will stick foot in the ground and work back inside and utilizes hand effectively to finesse space to work.

Flexibility: Ability to bend and drop shoulder to speed rush off the edge is present and very effective at current level of competition. Has free hips to hinge and swing back inside. Loose lower body to stick foot in the ground and produce high short area change of direction.

Run Defending: Offers little other than a slashing role and penetration player. Fails to stack up blocks and squat on the point of attack. Will struggle to get off of blocks and have issues with playing off of contact to challenge ball carriers in the hole.

Competitive Toughness: Does not do well when tasked with playing off of contact. Will struggle to stack and work free of hands from blockers, particularly in the running game. Has had some lapses late in non-competitive games RE: motor and pursuit.

Tackling: Closure to the ball allows for some definitive tackles when chasing down ball carriers from the back end. Has the ability to work off the weak side and chase down the ball carrying into the far boundary thanks to straight line speed.

Lateral Mobility: High levels of fluidity as a flow defender along the LOS. Twitchy athlete capable of mirroring on zone read or QB run plays. Has quick short area agility courtesy of lighter frame.

Stand Up Ability: Ability to sustain burst coming off of a two point stance. Lateral flow to chase down can shine in a stand up position. Doesn't have the strength to hold the edge in the run game and will get washed by skill players on the boundary.

Football Intelligence: Has been utilized frequently in roles other than a penetration player. NFL role will be limited as a niche player or one facing a transition to a new position, so will face uphill transition to next level.

## FILM ASSESSMENT

Games watched: Washington (2016), Washington State (2017), Notre Dame (2017), Ohio State (2017)

First Step Explosiveness: Lacks the required burst off the line of scrimmage to challenge OTs on deep sets. Will struggle to gain hip to hip alignment without implementation of power moves, as a result will be negated by sure angled blockers.

Hand Technique: Is notably unimaginative as a pass rusher. Does better as a POA defender to stack up blockers with a heavy handed punch and win positioning effectively. Shows mostly power disengage techniques, is not a finesse oriented player.

Pass Rush Counters: Fails to inspire with first contact counter moves. Will need to be more effective squaring rushes on half a man as compared to rushing in a head up alignment with so much frequency as a means of turning blockers and creating space.

Flexibility: Is not a leaner or a bender. Instead wins with power and exploding hips through contact as a bull rusher, looking to generate momentum in tight spaces before trying to rip off a block.

Run Defending: Has been reliable and effective standing in at the point of attack and challenging bigger opposition, although size and lack of diversity to disengage can be problematic if playing up on the LOS with high frequencies if not protected with athletes behind him.

N/A EDGE Combine Avg. (03-16): N/A

Games watched: Notre Dame (2017), Mississippi State (2017), Oklahoma (2017), Alabama (2017)

First Step Explosiveness: Does not have a great deal to twitch firing out of stance from either a two or three point stance. Will struggle with wide angled rushes as tackles widen to increase cornering angles due to lack of ability to press upfield with quickness.

Hand Technique: Shows a firm strike to create leverage at first contact, but placement can betray at times and neuter power. As a result will have to re-work hands and give ground trying to establish a clean stack of a block before discarding the opponent.

Pass Rush Counters: Needs to put the spin move away, will spin without moving laterally and concede chest and lose reps. Counters are most effective when timing up a club or swat through first punch and forcing a false punch from OT.

Flexibility: Modest ability to pivot and buzz off the LOS into flat responsibility as a stand up defender.Will not tilt or lean or dip with great effectiveness trying to win around the boundary as a pass rusher. Shows good pad level when locked up with OTs.

Run Defending: Will lose leverage at times looking for the football, but by and large has had strong success to close in the boundary and force backs to work eyes back inside to try to find another running lane.

Competitive Toughness: Blue collar player. Does a lot of grunt work setting the edge and being a key defender against the run. Shows good hustle off the back side and fighting to get off of blocks and into pursuit of the football.

Tackling: Has the needed length to influence gap in immediate vicinity if the ball carrier tucks up inside. Does not show high end mobility and tilt in the upper half to lean and get notable amount of pads behind late tackle challenges.

Lateral Mobility: Has a decent level of lateral mobility. Hips are not the loosest and as a result will labor with initial step to widen and protect the boundary. Foot speed is fair but again not a trait that will win reps if isolated in zone read on the edge and having to slam down on QB.

Stand Up Ability: Can be used as an edge setting defender, although a pass rushing role should not be expected to yield results with consistency. Only a pedestrian athlete who would be better served aligned tighter as compared to being naturally placed in space.

Football Intelligence: Would like to see some added versatility as a rusher to add more value as a three down defender. Can get lost in the shuffle by not trusting ability to read block and will get slipped at the POA.

## FILM ASSESSMENT

Games watched: Kansas Sate (2016), Notre Dame (2017), Southern California (2017), Texas Christian (2017)

First Step Explosiveness: Does not possess a notable level of burst out of stance, from either a 2 or 3 point stance. Has more acceleration through secondary steps than initially when coiled into stance. Has not won with speed off the edge at Stanford.

Hand Technique: Utilizes hand length well, understands the value of keeping arms extended and chest clean. Does not illustrate a lot of deliberate counters to sweep hands clear but predominant move to shed is a compact rip move across the chest of blocker.

Pass Rush Counters: Fairly unimaginative as a rusher, prefers a single hand stab in an attempt to hit the corner fast and speed rush to target. Failed initial attack is typically followed with a bull rush but doesn't possess the strength to push and collapse the pocket.

Flexibility: Does not possess a great deal of bend to corner with speed or to reduce surface area and force missed punches from offensive linemen as a rusher. Plays with eyes at the numbers of tackles when locked out into a firm run fit, plays with good linear leverage.

Run Defending: Much more effective against the run than as a pass rusher. Sound run fits and effective to establish the LOS and hold ground. Trusts eyes and feel of blocks to work around traffic and find way into pursuit of the ball carrier.

Competitive Toughness: Pursuit skills are top notch. Has a good second effort after missing initial target or once bogged down into heavy traffic to recover to find the football. Persistent with hands and knows how to use leverage to stick at the POA.

Tackling: Effective in both tight spaces and in the open field, has good balance and patience. Does not have great short area lateral quickness, which can allow some shifty backs to slip out of the grasp, however.

Lateral Mobility: Only modest quickness in the feet when tasked to play side to side and sustain leverage against ball carriers. Can get caught on an island as the edge defender against zone read looks and when left unblocked.

Stand Up Ability: Has been flexed out into the slot on some occasions and surprisingly offers a fair amount of range when tasked to hit zone landmarks. Has good anticipation and peripheral vision to see routes developing and working way into his space.

Football Intelligence: Very intelligent player. Rarely caught taking the cheese on misdirection plays, has excelled in the run and against the pass as a zone defender by knowing responsibility and executing team defense.

## FILM ASSESSMENT

Games watched: West Virginia (2016), Duke (2017), Florida State (2017), Notre Dame (2017)

First Step Explosiveness: Does not showcase a high end amount of burst or explosiveness out of stance. Will struggle to win initial positioning off the edge as a speed rusher, must rely on hand techniques and power to help soften steep angles.

Hand Technique: Has developed a very potent punch, hits with a lot of power and will jolt pads of defenders to win control of space. That said, is irregular with hand usage and will often times give up chest all together. Struggles peeling off a hand fit off chest, will be content to lock horns.

Pass Rush Counters: Has a fair level of versatility but consistency in usage of arm over, rip move and other counters is hit or miss. Can make the most of limited burst with a clean counter but cannot implement with consistency.

Flexibility: Does not have a good deal of tilt or bend. Coils well when exploding into a gap but doesn't have desirable tilt and ability to rush around bodies on the perimeter. Instead needs to generate movement in line with hips to win space.

Run Defending: Stout at occupying linemen or pushing through contact and uncovering in games. Hand counters are most effective playing off bodies as a gap penetration defender, will shrug off hands and get free to locate the football in the backfield.

Competitive Toughness: Has great play strength to work through contact at the point of attack. Has a good presence to reset the line of scrimmage and control primary gap at the line. Effort to peel back after missing initial landmarks is good.

Tackling: Does not have great closing burst to close down distance and track down ball carriers off the back side. Has good deal of power in pads to pop QBs in the pocket or ball carriers trying to turn up runs into vicinity.

Lateral Mobility: Much more effective in linear role as compared to having to generate quickness side to side. Does not show agility in tight space, nor the looseness and long speed to get width in the run game as a means of sustaining outside contain.

Stand Up Ability: Should not be relied upon to work as a space defender. Does not have the agility, foot quickness or range to be effective away from the line of scrimmage or without hand in the dirt.

Football Intelligence: Has a hard time with concept of softening angles unless using raw power to do so. Has shown flashes of developed techniques to play with finesse but instances are too few and far between to prevent perception as a one dimensional player.

## FILM ASSESSMENT

Games watched: Clemson (2017), Alabama (2017), Missouri (2017), Central Florida (2017)

First Step Explosiveness: Has a visible burst out of stance, drives hard up field in an effort to gain early leverage on pass sets. Capable of pressuring hard outside courtesy of ground covered in initial step out of stance. Closing burst from an upright position is prominent as well.

Hand Technique: Is much more successful avoiding first contact with hands than recovering after absorbing contact. Will get pulled off of position if chance is given to blockers. Needs to press cleanly and sustain distance. Length is adequate but not especially notable.

Pass Rush Counters: Loves working back to a double arm sweep to clear the hands of a punch prior to contact. Is a bit one dimension but get off paired with sweep combination can be a very potent and effective rush. Would like to see outside/in counter built on top of outside speed rush.

Flexibility: Has a good level of lean inside to duck the inside shoulder to play with leverage and power as a rusher. Will play through contact on inside bend and sustain balance thanks to mobility in the lower body to catch the feet and keep running.

Run Defending: Does not uncover from blocks with desirable consistency. As a crash defender can win to a spot but will not redirect well out of initial pathway if tasked with countering lateral contact or having to sit down and collect balance.

Competitive Toughness: Constantly playing forward. At times will have momentum used to disadvantage and be sucked out of positioning. Stout at the LOS to establish footing and squat hips to hold posture when playing square to the LOS.

Tackling: Powerful build and closing burst enable potential for big time collisions. Takes good angles in pursuit to be ready to strike once arriving at the ball carrier. Wingspan will prevent any consistency is reaching out to catch ball carriers with arms.

Lateral Mobility: Does not match expectations for lateral range when considering initial burst and ability to corner. As a crash defender can reach the mesh point with quickness but often times is eliminated from plays when the ball goes away.

Stand Up Ability: Effective release as a 2 pt. pass rusher from upright positioning. That said, won't offer much in the way of mobility, pass coverage or consistency stepping up to defend the run from such wider angles.

Football Intelligence: Has done well to produce an effective pass rush plan, takes favorable angles in space to force tackles to address early, and then counters with good timing and a clean counter strike.

## FILM ASSESSMENT

Games watched: Pennsylvania State (2016), Michigan (2016), Clemson (2016), Oklahoma (2017), Iowa (2017), Wisconsin (2017)

First Step Explosiveness: Has only modest burst off the edge but as an interior rusher has good get off to pair with length and consistently pressure OL early on in pass sets. Very graceful athlete for 280 lbs frame. Can stress inside gaps with great effectiveness.

Hand Technique: Hand placement is currently all over the map. When able to get the hands aligned effectively and establish length is nearly impossible to block. Must be more cognitive of throwing hands early in set and finding that locked out position.

Pass Rush Counters: Has a number of counters at disposal, including inside spin, push/pull combo and others. That said, does look to guess at times instead of playing with reactive quickness, would like to see more flexibility in counters.

Flexibility: Very bendy, although perception can be skewed due to the raw amount of area covered as a longer player. Needs to do better to diminish surface area and not provide blocking surfaces in all facets of the position. Can corner with suddenness, shows good hip drop to gather balance.

Run Defending: Does not have consistent stack ability to stay square and keep positioning. Size can be a barrier in keeping leverage and holding ground effectively on the inside. Has large reach to occupy space and influence along the boundary.

Competitive Toughness: Is at times guilty of getting stuck on the block, needs to showcase greater upper body strength to press blockers off of body and create ability to pull away from blocks. Second effort rushes are crafty and effective slipping off into a pressure.

Tackling: Massive tackle radius courtesy of fluid movement skills, sudden lateral mobility and a very large wingspan. Will wrap and roll to pull down ball carriers at the POA. Effective finisher in lateral challenges as well to scrape down the line.

Lateral Mobility: Has good presence inside the tackles, can be a problem as a crash or slant defender off the back side to challenge into the mesh point. Will get stressed at times on the edge on account of length of strides and having to get lateral with suddenness.

Stand Up Ability: Should not given consideration to play in a wider, outside role. Movement skills laterally are a challenge in space, the tighter the angles and tighter the window the more effective he can be.

Football Intelligence: Has flashes of dominance but overall lacks the consistency in technical skills to reach full potential. Has been trapped behind a loaded group of defensive linemen throughout the course of career with the Buckeyes.

## FILM ASSESSMENT

Games watched: Kentucky (2016), Syracuse (2016), Virginia (2017), Clemson (2017), Purdue (2017)

First Step Explosiveness: Doesn't often have opportunity to showcase first step burst but has a modest amount of juice when given free runs into the backfield. Is not a pure speed rusher but shows some nice snap anticipation to get out of stance early.

Hand Technique: Hands are effective and fluid when able to connect on a counter during first strike. Lacks the power and extension away from body to bench press defenders off of body and as a result can get sucked into the POA.

Pass Rush Counters: Has some nifty counters back inside, works best as an outside-in rusher who can push/rip way back across the face of oversetting OL. Has nice dip and presence of mind to displace body in a strike area, will minimize contact as a result.

Flexibility: Terrific ability to contort body in tight spaces as a way to force false punches and keep frame clean. Has a surprising skill in dipping the inside shoulder but needs to transfer power up through the ground when trying to diminish rush angles.

Run Defending: Lack of anchor to sustain body positioning and lack of strength and hand development to press and get off of blocks are problematic. Has bright flashes with initial counters as a gap penetration defender to uncover before locating the football.

Competitive Toughness: Can get pushed around and bullied if trying to play in line and tight to the POA. Struggles at times with reestablishing separation of hands to disengage. Motor and pursuit off the back side of plays leaves something to be desired.

Tackling: Has a notable wingspan and has no issue with wrapping up when pressing down into the ball carrier from an adjacent gap. Doesn't illustrate a lot of explosive hitting power but does well to align tackle opportunities, especially when flattening as a pass rusher.

Lateral Mobility: Is not especially fleet of foot, nor shows ideal levels of lateral range if caught out in space and tasked with opening hips out into the boundary. Has a nice ability to come to balance and redirect momentum but foot speed in longer distances is notably lacking.

Stand Up Ability: Effective as a contain rusher and as an outside in rusher. Has to get better at establishing better pad level and leverage to prevent being spun out of gaps and manipulated along the defensive front.

Football Intelligence: Requires more consistency and better dedication to staying square to the line of scrimmage. Can be a much more productive rusher with more attention to paring down rush angles with some force through inside arm on the outside track.

## FILM ASSESSMENT

Games watched: Purdue (2016), Pennsylvania State (2016), Northwestern (2017), Ohio State (2017), Miami (2017)

First Step Explosiveness: Will not inspire on reps tasked with trying to win the edge with quickness. Does not possess any notable levels of burst or explosion to drive out of stance and get depth into the backfield from two point stance.

Hand Technique: Hands are developed and effective in the run game. Understands value of locking out arms to keep chest clean and staying extended before looking to discard of blockers with a sweep or pull. Two handed pull is most effective shed.

Pass Rush Counters: Loses extension and consciousness of chest separation, often times negated after first contact. Has used inside spin move effectively and is capable of bulling back OTs to collapse the pocket when given cushion on the edge.

Flexibility: Does not have a lot of disassociation between the upper and lower halves. Needs hips and shoulders aligned to make the most of functional power. Struggles to lean, tilt and finish rushes on steep angles due to lack of mobility in lower body.

Run Defending: Great nose for the ball, often times will trust keys to defeat the block and uncover by the football. Has the needed power in lower body to butt heads with OL at the NFL level along the line of scrimmage.

Competitive Toughness: Stout defender along the outside. Will bow back and hold firm with leverage to sustain outside contain. Hustle and pursuit efforts are admirable, but some added patience would prevent running self out of some plays.

Tackling: Has fair amount of short area balance to get head up on ball carriers. Has good awareness of when a low cut at the feet of ball carrier leaving area will result in a tackle. Stout pads when engaging in the alley. Nice habits to wrap up off the back side.

Lateral Mobility: Does not possess a great deal of lateral range, foot quickness is modest and can struggle against more fleet of foot athletes if isolated in space. Would best be served playing outside in.

Stand Up Ability: Very effective run defender from an outside alignment. Physical punch and skill to turn out blockers and ensure the edge integrity is sustained. Won't often get beat outside. Lack of ideal twitch handcuffs abilities as a pass rusher.

Football Intelligence: Pursuit angles need to be cleaned up in relation to athletic abilities. Can be overambitious at times. Shows good discipline and fundamentals in a contain role against the run. Hustles to landmarks in zone coverage effectively.

## FILM ASSESSMENT

Games watched: Fresno State (2016), Miami FL (2017), Western Michigan (2017), Appalachian State (2017)

First Step Explosiveness: Does not possess great explosiveness as an athlete but is capable of timing up snap counts and aggressively bolting up the field to challenge vertical pass sets from OTs. Gains more pace through steps 2-5 than on initial step out of stance.

Hand Technique: Has violent, active hands when trying to knock down the hands of a blocker. When forced to lock horns with blockers is guilty of failing to extend and create any separation in order to discard of the block cleanly.

Pass Rush Counters: Has an effective tilt with hands to steer Tackles and create a soft angle if trying to challenge with speed. Forearm chop is well times to drop the hands of a punch and keep chest clear before rushing and tilting back into pathway of passer.

Flexibility: Struggles to turn the corner with ability to get the inside foot to catch if attempting to work around tackles on steep angles. Has lost footing and contain in efforts to corner sharply. Does not show lateral range on account of hip tightness to widen.

Run Defending: Penetration style defender. Gets through gaps with urgency and violence in the hands to play off of contact before flattening down to continue in pursuit of the football.

Competitive Toughness: Can get pushed around if caught in the pile, lack of length is problematic and does not illustrate a firm hand hold in order to set anchor at the LOS Second/third effort plays are littered throughout film and as a result is consistently in right place at right time.

Tackling: Has a terrific nose for attacking the ball as a finisher. Consistently seen swatting and batting at the ball in the pocket and will put facemask on the ball in the open field. Has explosive pop when collisioning ball carriers from the side, capable of crashing down hard off the LOS.

Lateral Mobility: Moves rigid in the open field when trying to flip the hips and transition out into the boundary. Will labor if caught in isolation and without a teammate to help set the edge and protect against speed in the run game.

Stand Up Ability: Lacks length needed to influence off the edge and does not have the explosiveness to win from wider outside angles as a pass rusher. Inexperienced and ineffective in space, so pass drops in zone coverage will not yield results.

Football Intelligence: Has some nuance with hands but generally speaking plays to pursuit. Holding gap integrity and stacking up blockers at the POA is not a strength, but will face difficult transition without physical skill to be a pursuit only defender in the NFL.

## FILM ASSESSMENT

Games watched: West Virginia (2016), Auburn (2017), Tennessee (2017), Kentucky (2017)

First Step Explosiveness: Twitch and burst out of stance is not especially notable. Fails to drive out of stance and cover a ton of ground with first step. Has more buildup speed than first step explosion. Does have some strong snap anticipation out of stance.

Hand Technique: Has some flashes of violent hands, but too often looks to duck down into a gap with first step and push through contact with frame and shoulders instead of ripping through to uncover.

Pass Rush Counters: Has quick hands when looking to establish a bit of separation. Prefers swim move but has illustrated a spin move as well if catching OTs off balance. Does not appear to be a rusher with a plan, instead looks to take what Tackle is giving him.

Flexibility: Struggles to get the foot to catch when looking to flatten and turn the corner on offensive tackles, will lose footing and slip if looking for hard angles. Does not showcase lateral hinge or tilt as a pass rusher.

Run Defending: Role at the college level has been centered around gap penetration. Struggles to showcase desired ability to play with hands and stack blockers consistently, will often get pushed out of the play or washed down the LOS without much of a fight.

Competitive Toughness: Fails to showcase desirable anchor at the LOS and skill to stack gaps with hands. Too easily washed out in the run game and has not been coached up on the finer points of run defending. Effort as a rusher on second and third effort back into the pocket is strong.

Tackling: Has some tightness in short spaces, will not always have the ability to tilt and work wingspan back into a place to challenge the ball carrier after cuts. Change of direction skills are compromised by foot quickness and lack of explosiveness as an athlete.

Lateral Mobility: Does not have a great deal of fluidity in space, does not have notable flexibility to hinge hips and crash down or open and get into the boundary if tested with speed as an unblocked defender.

Stand Up Ability: Does not possess the desired movement skills to spend time isolated out in space or in pass coverage away from the LOS. Lack of notable burst out of first step will cause problems as a wide angled rusher, would recommend keeping in tight alignment.

Football Intelligence: Will require some mental reconditioning in order to assimilate to the NFL. Is going to need to be coached on the value of hand fits and usage to stack blocks and keeping chest clean.

## FILM ASSESSMENT

Games watched: Ohio State (2016), Colorado (2016), Florida State (2016), Florida (2017), Michigan State (2017), Pennsylvania State (2017)

Hand Technique: Has a good level of pop and stun in hands in order to stun. Capable of stacking blocks and has favorable length to extend and keep chest clean. Has shown a push/pull combination and tight rip to disengage in the running game.

Competitive Toughness: Effort is a staple of game. Can be seen working $10+$ yards down the field chasing after quick WR screens and boundary runs. Pass rush effort after missing initial landmarks is good to work back into the pocket and challenge QB .

Two Gap Ability: Doesn't have a great natural anchor, if caught high can get uprooted. Initial quickness and lower body power allows for frequent first strikes to win point of contact; can utilize that plus length to extend and hold ground to read head up blocks.

Gap Penetration Skills: Has proven to be very difficult to reroute if playing in a single gap penetration role. Will drive legs through contact in order to power through and uncover in the backfield. Is quick to redirect afterwards and find the football.

Tackling: Has let a few plays get away by grabbing at the legs instead of trying to get higher around the waist. Likable awareness of pursuit and will adjust angles on the fly in an effort to stay in a favorable position to challenge the ball. Powerful and effective in tight areas.

Flexibility: Very loose mover for stature. Body is capable of producing high levels of lean when twisting or stunting around the formation; carrying speed in the process. Has great pad level firing off of the line of scrimmage to not give up chest.

Pass Rush Counters: Initial quickness wins many reps but has implemented rip, swim and push pull in live action. Explosive athletic profile allows for bull rushes to collapse the interior and put offensive linemen on ice skates on way to QB .

First Step Quickness: Very quick on the draw. Has had success firing off the ball from either a nose tackle, 1T, 3T or 5T position; has been moved all around the formation and has great vision and reactive quickness in stance to be able to shoot off the ball and get into gaps.

Feet/COD: Light on feet. Shows ability to flip hips and get width to react to ball moving into the sideline. Has ability to stop and work back without laboring, enabling active and effective stunt work as a rusher.

Versatility: Has ability to play a number of roles. Is best as a pass rusher and a penetration play encouraged to play forward. Has natural strength to play on the interior and not be bullied by combo blocks.

IDL Combine Avg. (03-16): N/A

Flexibility: Shows strong mobility and ability to twist through the trunk, will long arm first contact to strike first and diminish strike surface area for blockers to land on. Has strong cornering skills to lean and work hips across body of blockers.

Pass Rush Counters: Successfully generates notable power in a short amount of space to bull and collapse pass protectors. Has a very compact and effective swim move to work over a punch and keep chest unoccupied before pressing through recovery block attempts.

First Step Quickness: Has quality burst off of the line but reactive quickness is more impressive. Shows ability to collision Center out of stance before shotgun snaps reach end destination. Can win as a gap penetration pressure player.

Feet/COD: Does not have high end ability to collect and redirect momentum on tight angles, requires space to carry speed through corners to show quickness, fluidity and flexibility as compared to sudden start/stop ability. Missed a number of finishes as a result.

Versatility: Capable of playing in odd or even fronts without exception. No problem with playing in either single or 2-gap responsibilities. Has the needed pass rush skill to stay on the field as a constant contributor on all three offensive downs.

Games watched: Florida State (2017), Vanderbilt (2017), Tennessee (2017), Clemson (2017), Georgia (2017)

Tackling: Terrific strength and power to squeeze tight on ball carriers and effectively finish plays when able to get hands on the ball. Has desirable amount of short area acceleration and short area quickness to fight back across the face of blocks and tackle at the POA.

Hand Technique: Illustrates wonderful pop through the hands, wins at first contact with as much consistency as any player in the class. Shows very strong upper body and enough length to lock out and stack blocks with ease. Multiple shedding techniques to uncover and challenge ball.

Competitive Toughness: Very stout in the middle. Understands how to sink the hips and will create pileups in the middle as needed. Does well to pursue to the football after throw is out. Successful in turning up the field and chasing the ball.

Two Gap Ability: Plays with a good level of leverage and ability to squat and control blockers without giving ground. Has needed length and hand techniques are clean to toss aside blockers. Shows good ability to locate the football against head up blocks and challenge the ball.

Gap Penetration Skills: Doesn't have an issue running through gaps as a slant or crash defender, generates momentum and forward push through powerful lower body to sustain forward drive.

## FILM ASSESSMENT

Games watched: Washington State (2017), Rutgers (2017), Stanford (2017), Utah (2017), Pennsylvania State (2017)

Hand Technique: Ability to punch with power is present. Shows adequate length for a stun and has terrific placement to discard of hands and keep chest clean while pressing forward into the LOS. Can struggle in two gap situations to extend and press cleanly before disengaging.

Competitive Toughness: Is a physically dominating defender in one on one situations. Imposes will and bulldozes offensive linemen in pass protection. Stout tackler and typically converts opportunity to get hands on to a finished play. Relentless motor.

Two Gap Ability: Lack of length is evident here, as is pad level creeping up while trying to locate the football. Struggles with lateral mobility to slide feet and get off of blocks cleanly to uncover into adjacent hole. Has functional strength but is handcuffed trying to play off heavy contact.

Gap Penetration Skills: Terrific in pushing through creases. Has hand usage to ensure a poor hand fit and continue working forward. Has good forward release and balance when challenged with blocks off center to sustain momentum.

Tackling: Will not consistently close and finish when uncovering head up with space for ball carriers to work. But hustle in pursuit, size at the POA and upper body strength all ensure ball carriers put into vicinity will get sucked down for a loss.

Flexibility: Doesn't show a great deal of lateral tilt in open space but ability to pivot and lean off of blockers in a phone booth allows for slipping blocks off of missed punches with regularity. Has good coil in stance and natural balance at the POA.

Pass Rush Counters: Has a wonderful blend of counters at disposal. Devastating inside club move will put blockers on their rear ends. Hand swipes, push/pull combo, rip unders, swim moves and occasional spin have all been successfully implemented in live action.

First Step Quickness: Has a good burst out of the line, especially considering stature. Will get quickly hip to hip with interior blockers and IOL tasked with coming down will struggle greatly to prevent momentum on the interior from pushing through into the mesh point or QB .

Feet/COD: Does not corner especially well in open field and as a result can have a hard time finishing potential splash plays after getting into the backfield. Has only modest lateral flow ability and foot quickness when not playing forward.

Versatility: Skill in gap penetration and pass rush is special for size. Will be a three down defender, has been moved up and down the LOS and tasked with stunt play. Will be a force in a penetration role, two gap reps should be limited to optimize skills.

## FILM ASSESSMENT

Games watched: Louisville (2016), Miami FL (2016), Indiana (2017), Louisville (2017), Virginia Tech (2017)

Hand Technique: Hands show awareness of playing off of hands/limbs of blockers. Transitions well out of initial punch and into a shed technique, will play through the wrist to break a grasp on body. Is at best with hands in tight spaces to turn out of contact.

Competitive Toughness: Can get knocked off path by getting too eager to penetrate up field. When playing balanced and square to the line of scrimmage is very stout, capable of locking out arms and holding ground effectively as a POA defender.

Two Gap Ability: Favorable size and length profile to play in B-gap in odd man fronts and eat up blocks. Will need some seasoning to sure up initial attack; must establish first contact with a clean punch instead of catching blocks and trying to rework fit.

Gap Penetration Skills: Terrific get off to win initially at the line of scrimmage. Will take advantage of wide sets or cheating guards to explode out of stance and disrupt the mesh point. Does well to transition into hip pocket of pulling OL and find the ball.

Tackling: Responsible for some very violent finishes as the ball carrier. Ability to win early in snaps and flatten to challenge from the backside has yielded good backfield production. Has a strong grip to reach out and grab ball carriers on the way through the hole.

Flexibility: Very impressive ability to disengage the hips and shoulders in order to slip through creases at the POA and push through with leg drive. Can flatten as a rusher off the edge when moved up and down the line of scrimmage with tilt.

Pass Rush Counters: Versatile rusher with skills to win inside and out. Does well with speed rushes, club, rip and spin to force a missed first strike from the OL. Can be guilty of predetermining counter moves prior to the snap and not having a secondary counter.

First Step Quickness: Dynamic initial get off can be featured both from the interior and on the edge. Has a good release off the line and is capable on gap penetration reps of winning early and pushing through to the mesh point with quickness.

Feet/COD: True "dancing bear" on the interior, very nimble on feet to change directions and work back across the face of blockers. Has the needed suddenness to be effective on slants out of stance and stunts on the move to work across a protection to uncover and challenge the pocket.

Versatility: Impressive ability to influence plays all over the line of scrimmage. Has been used as a standup player in interior gaps, a stunt rusher, a gap penetration player, rushing off the boundary and more. Effective playing both the run and the pass thanks to twitch and strength.

## FILM ASSESSMENT

## Games watched: Pittsburgh (2016), Notre Dame (2017), Florida State (2017), Wisconsin (2017), Duke (2017)

Hand Technique: Shows terrific length. Has powerful punch to press and separate at the LOS. Has active hands and often will rip under contact to play through a potential block and sustain forward push. Can improve shedding with increased attacks at wrist or elbow of blockers.

Competitive Toughness: Will every so often get caught giving up the chest and get buckled. Recovery strength and natural anchor are terrific. Has a powerful style of play and strong upper body to dictate against blockers for positioning and uncover.

Two Gap Ability: Has excellent anchor and ability to lock out to hold ground. Shows above average ability to shuck blocks and some surprising lateral quickness if working directly down the line of scrimmage. Anchors as needed to hold vs. double teams.

Gap Penetration Skills: Capable of shooting through the crease if left off the chain and encouraged to power forward at the snap. Will defeat back blocks and get into the hip of pulling OL with quickness, showing good reactive read skills to diagnose while pressing forward.

Tackling: Wingspan is massive and does possess notable upper body strength to grab cloth and pull in tight to finish a play. Has good ability to tilt and lean into tackles when scraping down the line of scrimmage. High finish percentages.

Flexibility: Anchors well. Has the ability to sit down against a block and hold the gap as a space eater in the middle. Has a modest level of fluidity throughout the hips and trunk to turn the corner as a rusher. Can redirect with efficiency due to mobility in lower half.

Pass Rush Counters: Has utilized an effective swim, which is cut low and does not provide much of a strike area for blockers. Also has had success with bull rushes and using a rip move to come up from underneath forearms of blockers and press through a crease.

First Step Quickness: Will surprise on designated slant and crash reps to quickly accelerate. First step has more juice than first look would suggest, which often times will catch soft contact out of position. Will

Feet/COD: Has fair ability to pivot and double back down the line for size, although general movement skills out in space result in some difficult cornering. Carries a lot of weight and momentum builds due to quality initial acceleration, is hard to recollect quickly.

Versatility: Won't be kept in speed packages, was subbed out at the college level. Has ability to positively contribute as a rusher on early downs. Can crash through gaps or two gap as needed. Good athletic profile will allow for plays against both the run and pass.

## FILM ASSESSMENT

Games watched: Memphis (2017), Central Florida (2017), South Florida (2017), Southern Methodist (2017)

Hand Technique: Shows very stiff hands to punch and jolt the pads of blockers on first contact. Shows ability to play with a long arm to help extend and keep chest free. Has a violent sweep to clear chest effectively and disengage while transitioning to pursuit.

Competitive Toughness: Is a fun, hard worker. Does well to flip eyes up the field and look for a ball carrier to chase down. Shows good hustle when pressing the pocket to keep looking for a crease. Has stout play along the LOS courtesy of leverage and thick lower body.

Two Gap Ability: Does not have the greatest length but shows stout ability to hold a gap at the LOS while feeling block develop and counter appropriately. Disengagement skills are centered around upper body strength in relation to opposition.

Gap Penetration Skills: Can be difficult to stop if able to get head and pads into a crease between two offensive linemen. Linear power and lower body strength combine to create a handful trying to shut down. Compact build compliments leverage.

Tackling: Powerful close thanks to slight adjustments along the LOS after reading the play. Has a good, powerful finish and times challenges well, not one to overrun when flowing laterally.

Flexibility: Has a fair level of looseness through the shoulders and trunk in order to play with a high level of generated power. Rotational force of hands playing through the core is end result. Will not turn the corner on blockers on most tight arc.

Pass Rush Counters: Will win reps with a speed to power bull rush, supplemented by some very potent hands on first strike. Has the violence and urgency needed in hands to swipe and clear chest. Shows ability to transition to a pull move as well.

First Step Quickness: Does not posses the most burst of IDL in the class. Has found success not through gap slants and pressures but rather by creating space to press into courtesy of play strength and power, plus surprising short area quickness.

Feet/COD: Has some dancing bear traits, surprising skill in sliding laterally and keeping momentum and pads square to the line of scrimmage. Notable ability in always stepping into forward progress. Has a decent spring on a hard step back across momentum.

Versatility: Has modest skills to play in a number of game situations. True value is as an interior piece to rotate in the run game and allow defensive flow behind to come clean into the LOS. Capable of winning reps inside as a rusher due to hand strength, pop and functional strength.

## FILM ASSESSMENT

Games watched: Mississippi (2016), Florida (2017), North Carolina State (2017), Clemson (2017), Alabama (2017)

Hand Technique: Hand usage attacking blocks at the point of attack is wonderful. Understands weak points against double teams to attack half of man and split the wedge. Has a good sense of stacking blocks with arms and pressing with upper body power.

Competitive Toughness: Very difficult to uproot in the middle, even when tasked with flowing laterally and staying square to the line of scrimmage and stringing plays to the hash. Heavy hands do well to take control of one on one blocks.

Two Gap Ability: Effective holding ground against Centers and could effectively play the nose without issue. Has ability to disengage late with push/pull and uncover into running lanes. Also has power to walk back blockers into the hole.

Gap Penetration Skills: Is capable of pushing through creases when aligned in gap but redirection ability or skill to get off of late contact and flow with the ball carrier is limited. Has much more value resetting the line of scrimmage.

Tackling: Strong as a bull when able to use wingspan to wrap up the ball. Has strong grip and does well to bring feet through contact to make sure full weight of pads gets behind contact.

Flexibility: Does not have a good deal of lateral tilt, struggles with cornering in tight spaces. Does play with a low natural center of gravity and draws anchor from dropping the hips and squatting off bodies at the NT position.

Pass Rush Counters: Does not offer much other than a rip maneuver to try to clear hands off of chest. Default is to come to balance and stack the block, awaiting ball to flush the pocket. Does have ability to convert hand pop into a bull rush.

First Step Quickness: Better initial step than given credit for. Has ability to coil in stance and fire off the ball with decent get off. Can win pass rush reps by pairing first step with functional strength to push through gaps when aligned in a gap.

Feet/COD: Labors notably when tasked with suddenly redirecting weight or vacating an area trying to pursue the ball or avoid contact. Does not have short area agility to pivot and play with quickness in areas other than straight ahead.

Versatility: Has modest versatility but value holds true as a two gapping defender on the interior. Natural anchor, functional strength and ability to stack and press blockers will do well to keep linebackers clean and flowing to the football.

## FILM ASSESSMENT

Games watched: California (2017), Ohio State (2017), Colorado (2017), Texas (2017)

Hand Technique: Shows good extension with hands to stack blocks at the point of attack. Is not effective when trying to sweep or press blockers away at the point of attack, is often late to transition with the hands and will let ball carrier slip past.

Competitive Toughness: Is guilty of consistently getting blown off the football. Struggles in short yardage to get low pads and squat to hold ground at the point of attack. Can be complacent in pursuit away from the football as well.

Two Gap Ability: Has the needed physical tools to be effective in such a role but needs a complete overhaul on how to hold the point of attack, struggles to hold ground and gets mauled down the field by notable NFL prospects on film.

Gap Penetration Skills: Does not have the initial quickness to consistently win without noted development in the hands to ensure a clean punch onto the chest isn't afforded to the opposition. Has needed functional strength and balance to press through a crease if momentum is gathered.

Tackling: Would be much more effective if a split second quicker on reaction to shed blocks and uncover. Has the needed length and lateral range along the LOS to be a reinforcement defender at the POA and not let ball carriers slip out the front door.

Flexibility: Plays with a high set of pads along the point of attack. Is capable of some nice flashes in tight spaces to flatten and challenge the passer but too frequently does not play with low set of pads or favorable leverage against interior OL.

Pass Rush Counters: Doesn't showcase much versatility, is primarily a rip/club defender when trying to shed. Often stuck after committing to a single gap and failing to offer any counters at first contact, still tries to run through gaps without hand usage.

First Step Quickness: Doesn't look overly explosive out of stance. Instead, will gain more momentum later into free runs and shows a better closing speed than initial twitch to get hip to hip with defenders.

Feet/COD: Has good lateral mobility if playing forward into the line of scrimmage to cross the face to blockers if not engaged. Has good lateral range if tested along the line of scrimmage to scrape and get out over top of the play and outside the hash.

Versatility: Has the natural strength and base to two gap, plus the power and mobility to be effective crashing into gaps. Both roles are currently works in progress due to some technical deficiencies but ceiling as a three down defensive lineman is extremely high.

## FILM ASSESSMENT

Games watched: Colorado (2017), Washington (2017), Arizona (2017), Brigham Young (2017)

Hand Technique: Shows good awareness of placing hands tight on the numbers. Does well to stay extended in an effort to steer offensive linemen and stay square to the line of scrimmage, protects leverage well.

Competitive Toughness: Difficult to uproot while anchoring in the A-gaps. Has strong lower body and good activity through the feet to reset the line of scrimmage and hold ground against double teams. Hard nosed player with good pop on each fire off the ball.

Two Gap Ability: Strong as a bull when locking horns at the line of scrimmage. Can be unmovable at times due to strong core and thick lower half. Length is adequate for holding ground but is not especially notable to discard blockers after initial stack of block.

Gap Penetration Skills: Strength is present to run feet and push through into the backfield if given a favorable alignment at the snap. Initial get off will not overwhelm NFL interior blockers, however. Penetration comes against pulling OL and after shedding blocks effectively.

Tackling: Shows a strong grasp and ability to finish once establishing wrap up in the hole. Has violent finishing habits and does well to stuff up interior gaps and stay present to locating the football at the point of attack.

Flexibility: Does not show a lot of lateral tilt when playing with upper half engaged against blockers. Most mobility throughout frame is shown when anchoring in linear situations to play with low pads and extend arms to stay squatting at the POA.

Pass Rush Counters: Is not particularly creative as a rusher, failing to show a lot of secondary counters other than intent to bull rush smaller offensive linemen back into the lap of the QB. Has a minimal value on the field in obvious passing downs.

First Step Quickness: Only pedestrian get off at the line of scrimmage. Often takes short first step to get out of stance instead of coiling and exploding to drive up field.

Feet/COD: Ability to redirect is admirable for size but in relation to peers is not going to inspire. Area of influence is limited to between the tackles. Does not showcase initial quickness when trying to slant through a crease to win on against oversetting OL.

Versatility: Will not be a coveted player against the pass. Niche and value holds strong as a space eater and two gap defender, but cannot be relied upon to offer much in the way of additional value to game situations as a result. 1st and 2nd down defender.

## FILM ASSESSMENT

Games watched: Florida State (2016), Vanderbilt (2016), Florida State (2017), South Carolina (2017), Louisville (2017)

Hand Technique: Hands are potent and carry a lot of power through punch. Has good extension to lock out on blockers and keep chest clean to sustain leverage at the point of attack. Shedding techniques are often sloppy and late, needs development getting off of blocks.

Competitive Toughness: Physically imposing player. Very stout and difficult to push around unless using own momentum against him. Will ease off the gas after initial push into the backfield, will concede some pass rush reps with a disadvantageous first rush.

Two Gap Ability: Has a strong track record of holding ground and occupying blockers. Length and functional strength are present to hold ground and sustain leverage to allow linebackers on the second level to cleanly flow over the top.

Gap Penetration Skills: Modest results when working from an end position, simply doesn't have the mobility to convert a strong push into a finished rep. Will blast through the B-gap with power and quickness to uncover when given looks inside.

Tackling: Length and linear burst will create powerful collisions at the ball. Ability to shadow shifty ball carriers is limited, however. Has missed a good deal of splash plays by not being able to mirror and shadow ball carriers in the backfield.

Flexibility: Is a very linear athlete, struggles with redirection to mirror the football or at the prospect of dropping the inside shoulder and flattening as a pass rusher. Squats into fits at the LOS well but anything involving work in space is limited.

Pass Rush Counters: Does not show creativity or ability to discard of pass protectors. Requires a good push through a gap or a slide protection away from alignment to create consistent pressure. Will convert speed to power on some wider angled rushes but will not create a lot of disruption in tight.
First Step Quickness: Has an impressive burst off of the line of scrimmage. When keying up obvious passing situations does have the linear burst to pressure some Tackles with speed. Get off wins on the interior as well due to thick lower half sustaining balance through a gap crease.

Feet/COD: Is not especially nimble and struggles when isolated or tasked with redirecting momentum late in the rep. Will take additional steps to collect balance before working back into a pursuit mode, often times shaken out of a potential tackle in head up situations.

Versatility: Usage at college level is not comparable to projection to next level. Should be regarded as a B-gap defender with two gap responsibilities and opportunities to stay on the field on 3rd down to rush thanks to explosive first step.

## FILM ASSESSMENT

Games watched: West Virginia (2017), Georgia Tech (2017), Clemson (2017), Miami FL (2017), Duke (2017)

Hand Technique: Has solid length and power in the hands to pop and reset the line of scrimmage against all comers on the inside. Shows good extension to keep chest clear and scrape down the line of scrimmage. Has good power to pull blockers off base and uncover.

Competitive Toughness: Is difficult to uproot in the middle. Plays with a great anchor and ability to throw the hands effectively allows for consist win at first contact. Plays with terrific motor and the ability to turn and run outside the numbers in pursuit.

Two Gap Ability: Has notable anchor skills and a powerful lower body to hold ground against double teams and drive blocks. Very likable levels of extension to lock out and read head up block situations to locate the football and discard with upper body strength.

Gap Penetration Skills: Quickness at the snap and overall functional strength allows for a hard push up field and ability to play through lateral contact. Has good redirection ability as well after uncovering in the hole to pursue the football.

Tackling: Has a very large tackle radius to influence at the line of scrimmage. Has the mobility needed to crash down the line and get after ball carriers pressing outside the tackles. Has good length and range of motion to optimize area of influence as a tackler.

Flexibility: Tremendous tilt and pliability for size. Has ability to corner and pivot with grace, enabling a lot of backfield production due to crashing hard off the hip of blockers in the hole. Plays with good leverage

Pass Rush Counters: Rip and club combination pairs well with high levels of pliability to turn the corner on inside blockers. Active and engaged in the stunt game, has been moved through A and B gaps and can crash through a crease and win with first step as well.

First Step Quickness: Has a surprising level of burst and explosion out of stance to get hip to hip with interior blockers with suddenness at the snap. For size, is a tremendous first step rusher and will provide 3 down value as a result.

Feet/COD: Very light on feet, nimble redirection skills are special for size. Has suddenness thanks to ability to drop the hips and collect momentum, is hardly a lumbering presence in the middle. Has weight distribution below the hips, providing a low center of gravity.

Versatility: A valuable three down presence along the interior. Should be able to contribute in any schemes thanks to quickness, strength, length and anchor skills at the point of attack. Has a strong cerebral presence as well, notably developed for a redshirt sophomore.

## FILM ASSESSMENT

Games watched: Washington (2017), Notre Dame (2017), San Diego State (2017), Texas Christian (2017), Southern California (2017)

#### Abstract

Hand Technique: Has heavy, powerful hands at first contact, does well to throw heavy punches and reset the line of scrimmage. Does not possess ideal length and as a result must dictate reps early on as compared to stacking and trying to shed and pursue.

Competitive Toughness: Ends way too many plays on the ground. Has a poor anchor if tasked with squatting on the line of scrimmage and far too easily has blockers seal down and close gaps quickly at the POA. Motor and hustle as a pursuit player are very strong.

Two Gap Ability: Does not have the fluidity or COD skills to disengage and quickly cover ground to slide over a gap. Subpar length is also problematic when trying to lock out and extend on blockers to keep chest clear.

Gap Penetration Skills: Ability to tilt shoulders and work into a single gap with hand counters allows for opportunities to uncover at the mesh point. Has only pedestrian burst and first step but has strength to push through lateral contact and cause disruption.

Tackling: Effective tackler once able to get mitts on ball carriers. Has notable upper body strength and will bearhug opponents and wrestle to the ground. Has only modest wingspan to influence ball carriers at the point of attack if still engaged.

Flexibility: Very tightly coiled throughout the hips and trunk. Struggles with redirection, struggles with leverage when playing in a two gap role and overall is a linear athlete. Has poor balance as a result of a narrow base and tight hips.

Pass Rush Counters: Has had success with a swim move, well sweep over the hands of Guards and slip a blow. Has good bull rush if aggressively charging directly out of stance. Has strength in upper body to pull blockers off of blocking platform.

First Step Quickness: Has more success with snap anticipation than actually exploding and releasing out of stance at the snap with burst. Won't gain notable ground out of first step, needs some space to build momentum and create force.

Feet/COD: Has extremely labored transitions and change of direction skills. If caught taking false steps is usually eliminated from the play immediately. Struggles with a lateral drive step to get width if trying to follow pulling guards at the LOS.

Versatility: Has notable strength and surprising gap penetration success but consistency and reliability to hold gaps is impossible to rely upon. Lacks burst and needed mobility to play up and down the line of scrimmage.

## FILM ASSESSMENT

Hand Technique: Has a firm hand placement and is effective to strike the hands on the chest of would be blockers. Shows good control to square up a block and stay ready to push/pull way off of contact and pull blockers off of their set.

Competitive Toughness: Stout and effective at the POA. Difficult to uproot and plays with a terrific anchor thanks to squatty build and effective hand usage. Not easily pushed out of space and can be a handful if given a head of steam in one on ones.

Two Gap Ability: Range is limited but does have the needed anchor and skill to sit in the middle and occupy blockers. Has allowed LBs to flow and penetrate off of hip with strong results.

Gap Penetration Skills: Powerful. Absorbs punches well due to limited surface area on pads and being consistently lower than blockers. Will not offer a lot of redirection skills but does provide a notable presence in the middle.

Tackling: Is a black hole in the middle if ball is pressed into wingspan. Does not, however, have good closing burst, nor effective lateral range. Has good timing to shuck blocks and be available to challenge the ball.

Flexibility: Does not have a great deal of lateral redirection due to tightness in the hips, although does show good balance to sustain posture and keep footing when having to contort the frame. Shows some fair rotational mobility through the shoulders to get skinny off blocks.

Pass Rush Counters: Primarily a power player. Rocks the pads of interior OL and has a good push through the feet to collapse the pocket from the interior. Effective hand usage to pull blockers off their platform and create space to press forward into a gap.

First Step Quickness: Does not have a lot of twitch. Speed is more build-up than anything else, requires space to gather momentum and become difficult to stop. Effective quick setters on the OL will have some success neutralizing him early.

Feet/COD: Is not fluid and won't offer a lot of lateral mobility along the LOS. Instead has issues when trying to turn or hinge the hips, will have subsequent issues with balance and struggle to play with same functional power when not square.

Versatility: Does not offer a lot of value in obvious passing situations. Primarily a block eater but has some value to push through interior gaps if encouraged to align in a gap and take it. Most likely a two down defender at the NFL level.

## FILM ASSESSMENT

Games watched: Wisconsin (2017), Florida State (2017) Notre Dame (2017), Clemson (2017)

Hand Technique: Does not posses a notable amount of pop in hands to push and reset the LOS at first contact. Lacking in idea length to dictate reps to blockers as well. Hands do well to work and find the wrist or elbow of blockers and offer a chance to shed.

Competitive Toughness: Motor runs hot along the inside, does well to fight and get across the face of blockers on lateral runs. Would like to see a better early anchor to drop hips and hold ground when faced with power drive blockers or double teams.

Two Gap Ability: Does not showcase the length, hand fits or gap integrity to hold ground and be relied upon as a two gap player. Will struggle in disengagement and not be able to adequately challenge the football under said circumstances.

Gap Penetration Skills: Low build allows for some natural leverage when trying to play around contact and work hip to hip will blockers. Quick to react and flow when faced with pulling OL, although angles after initial penetration need to be more flat to allow more challenges to the football.

Tackling: Effective bear hug tackler to engulf ball carriers when able to challenge from the hip pocket scraping down the line. Very stout to stand up ball carriers in the alley as a head up defender as well. Range is modest, can challenge between the numbers.

Flexibility: Shows more lateral tilt on the hips than actual lower half mobility. Does not have great ability to flatten or turn tight corners with fluidity in the hips, will struggle with need for sudden COD as a result.

Pass Rush Counters: Prefers to rip, while also showcasing an inside spin move in effort to displace from gap. Is unimaginative when unable to land first strike or when failing to gain a gap early on in sets, far too easily neutralized and content to lock horns.

First Step Quickness: Has a nice first step and reactive quickness to identify an alley or pathway to the football. Will crash down or slant into a favorable position on release and wins with quickness.

Feet/COD: Struggles with suddenness and sharp turns, despite a low set build. Pace and momentum are problematic when trying to mirror or work down the line after initial push into the backfield.

Versatility: Should be regarded strictly as a traditional 3T. Does not have a viable ability to play as a two gap defender and lacks the twitch to contribute consistently as a boundary player. Ability and foundation suggest full time role is within reason with development.

## FILM ASSESSMENT

Games watched: Arizona State (2017), Notre Dame (2017), Clemson (2017), Florida State (2017), South Carolina (2017)

Hand Technique: Has ability to yank blockers off of pass sets or run fits with push/pull combination. Hands visibly latch into the chest plate and will yank around blockers trying to establish a clean frame of the block.

Competitive Toughness: Uprooted off of the point of attack against double teams. Won't trust eyes and hands in stacked block situations, will peek in the backfield and lose leverage, get pushed around. Has ample unlocked potential as a true NT.

Two Gap Ability: Has a very strong natural anchor and ability to squad hips down and cause a pile up in the middle of the POA. Has some inconsistencies with leverage and pad level to hold ground, making results as a true nose hit or miss.

Gap Penetration Skills: Strong as an ox, able to run through down block attempts or late contact attempting to wash out of the play. Failure to show desirable first step inhibits consistencies in teeing off on obvious passing situations or as a slant defender.

Tackling: Can be a black hole in the middle if ball is pressed up into gap. Does not have a lot of lateral range and also struggles some with late disengagement to get off of blocks suddenly as a two gap stack.

Flexibility: Tight through the core. Has ability to bend the knees and drop the hips but anything requiring suddenness in lateral situations or with change of directions will pose significant issues. Will need to drop the pads down, loses leverage at first contact too easily.

Pass Rush Counters: Unimaginative rusher. Too often content to lock horns and hold ground at the top of the pocket in an effort to create a bull rush and push instead of continuing to work around bodies and create penetration rushes.

First Step Quickness: Pops up too tall out of stance, needs to get more weight forward on hand to prevent inflexibility from showing up out of stance. Does not have a lot of notable forward push to create chaos at the mesh point.

Feet/COD: Lateral range is nonexistent. A linear athlete, does best with pads and hips aligned in the same direction to carry frame with any notable pace or speed. Has a small area of influence outside of primary run fit and gap responsibility.

Versatility: Is a nose tackle, and one without a lot of polish at the POA. Lack of movement skills and burst will cause headaches trying to keep on the field for high snap percentage, but overall needs discipline at the POA.

## PRODUCTION SUMMARY

## 133 total tackles, 4.0 sacks, 20.5 tackles for loss (TFL)

## FILM ASSESSMENT

Games watched: Southern California (2017), Oklahoma (2017), Oklahoma State (2017)

Hand Technique: Fails to illustrate desirable length, instead relying on first step and notable power on first contact to roll back blockers at the LOS. Has an effective rip to work underneath contact of blockers as a slant rusher and gain ground.

Competitive Toughness: Very stout defender with a great lower half and strong base of support. Hustle and motor plays show up on film, trying to pursue down the LOS. Is a nightmare in short yardage due to linear burst, leverage and lower body power.

Two Gap Ability: Two gap ability is compromised by anatomical length, doesn't have needed extension to keep chest clean and read gaps. Is capable of eating up double teams effectively and allowing defenders to flow freely behind him.

Gap Penetration Skills: Has balance to push through lateral contact and avoid being washed out of plays. Uses hands effectively to ensure blockers are not able to get into chest with any sure handed fits and continue pressing up the field.

Tackling: Does not have great finishing ability due to a lack of length and failure to accelerate to ball carriers unless gap fits force a stop. Very strong at first wrap up. Has some lean and tilt to try to get pads in front of an adjacent gap at the LOS.

Flexibility: Does not do well when tasked with flattening on hard angles, is too stocky and linear as a result. Has good anchor when trying to sit down with hips low and squat through contact. Has some modest mobility through the upper body to slip creases.

Pass Rush Counters: Has an effective bull rush and a winning rip move to force way through interior A-gaps. Will not show extension to force free against locked hands, needs to be working into a gap or create space with a noted punch off the snap.

First Step Quickness: Modest acceleration out of stance as a gap penetration player. Does not show ability to jump out of stance with quickness and consistently reach the mesh point. Has not been given gap aligned reps often enough.

Feet/COD: Feet labor in sudden COD situations to be able to collect heavy frame with any level of effectiveness. Will require extra space to gear down and get control of momentum. Secondary acceleration after first step does show some modest acceleration through contact.

Versatility: Has some decent anchor work to warrant NT reps but overall is a true 1 T defender. Should not be given tack and shuck responsibilities with any notable high volume, instead needs to be given chance to play through A-gap.

## FILM ASSESSMENT

Games watched: Arizona State (2017), Notre Dame (2017), Clemson (2017), Florida State (2017), South Carolina (2017)

Hand Technique: Shows understanding of how to extend and optimize length to dictate reps early. Has powerful punch and has good awareness of hand placement to ensure a clean stack. Will illustrate good upper body power to bench press blockers off spot.

Competitive Toughness: Guilty of giving up too much space at the point of attack at times. Has a fair motor but overall explosiveness and range are not going to allow for a high frequency of impacted plays.

Two Gap Ability: Has stout anchor and an effective ability to eat up blocks. Ineffectiveness in anchor comes when trying to get lateral and disengage from blocks, if encouraged to stay square and occupy will have consistent success on the Nose.

Gap Penetration Skills: Has little ability to press through gaps. Ineffective first step will neuter strong anchor and strength to play through contact when square to the line. Has strength to collapse blockers one on one if encouraged to get penetration.

Tackling: Shows good effort to play within immediate gaps as a finisher, will get down the field and help corral ball carriers from behind. Has very good natural strength and ability to throw out a hand and absorb a ball carrier working up into responsible lane.

Flexibility: Tightly wound athlete in instances that require gaining width at the line of scrimmage. Struggles in cornering situations and trying to work to hard angled targets as a pass rusher. Could afford to drop pad level when holding the point of attack.

Pass Rush Counters: Shows some fair creativity trying to win at first contact. Has a nice long arm and shows good reach to engage early and give body room to work. Has used a nifty inside spin move on occasion with success.

First Step Quickness: Doesn't have a notable burst or first step to explode out of stance and pressure offensive linemen early in their pass sets. Has to win with counters, no visible acceleration available in the subsequent steps either, simply lacks twitch.

Feet/COD: Has issues with collecting weight effectively and working back to a pursuit role, will not be effective if tasked with playing outside the tackle box. Has little in the way of suddenness to cross face and crash down into a gap.

Versatility: Should warrant consideration as a nose or 1T in an even front. Has just enough pass rush ability to offer starting upside, although not likely to have success as a rusher on third downs unless surrounded by high profile teammates on the DL.

## FILM ASSESSMENT

Games watched: Alabama (2017), Oklahoma (2017), Auburn (2017)

Hand Technique: Does not utilize length to best of ability, often times willing to wrestle in close proximity and is best getting off of blocks as a crash/stunt defender vs. using hands to feel blocks and disengage.

Competitive Toughness: Plays with far too much finesse. Has turned back to the LOS trying to spin out of a block but never offers a power element to compliment it, which allows blockers to sit on counters.

Two Gap Ability: Does not have the needed anchor against combo blocks inside to warrant consideration as a nose, plus is undersized to hold the POA. Capable of stacking blocks in one on one situations but needs further attentiveness to shedding hands when the time comes.

Gap Penetration Skills: Finds a lot of success by crashing down through gaps and stunting way through the POA. Has to be more aware of ripping through contact to prevent linemen from riding him out and preventing a clean challenge of the mesh point.

Tackling: Strong nose for finishing the play. Has a good wingspan to wrap up ball carriers and has understanding of proactive angles once uncovered and attacking the backfield or when scraping down the LOS.

Flexibility: Has good leverage at the POA, showing effective knee bend and hip drop to play low and stay underneath the pads of blockers. Has a fair level of lower body mobility to come to balance coming off of blocks or looking to flatten and pursue the ball.

Pass Rush Counters: Offers minimal production if trying to push through a block. Will lock up on a blocker and does not show any rhyme or reason for hand counters or efforts to disengage from blocks. Likes to utilize an arm over move to swim overtop of a blocker.

First Step Quickness: Can roll out of stance with some nice anticipation but is not overly explosive as an athlete on the inside. Wins more after pinballing off of contact than shooting quickly through gaps with athleticism.

Feet/COD: Has effective ability to flatten and get down the LOS when chasing outside runs. Shows nice balance in tight spaces and has little issue with redirecting weight off of a balanced base.

Versatility: One gap defender only. Doesn't have the functional base and strength to squat and hold firm when tested with powerful blockers between the tackles. Has only a marginal level of pass rushing upside as packaged currently as well.

## FILM ASSESSMENT

Games watched: Alabama (2015), Mississippi State (2017), Florida (2017), Notre Dame (2017)
Hand Technique: Lacking in the needed length to put off Flexibility: Is tightly wound through the core and hips. contact from blockers consistently, will give up chest and be Does not show idea levels of lean when working across face collapsed at the POA as a result. Hands are lethargic and do not sweep or show intent to disengage with anywhere near desired consistency.

Competitive Toughness: Soft. Gets pushed off the ball with consistency due to inability to extend and establish a hand punch on blockers at the point of attack. Needs to work on hunkering down with hips and holding ground with a low COG.

Two Gap Ability: Has modest strength if tasked with playing a single blocker in head up situations, but questions will remain on ability to shuck the block as ball carrier declares into gap. Does not have great lateral mobility to stay stacked overtop of a reach block, either.

Gap Penetration Skills: Struggles without natural burst to work into hip to hip positioning. Does have natural strength and balance to push through lateral contact if able to get face uncovered into gap.

Tackling: Natural wrap up strength is strong, holds ball carriers in the grasp well and will wrestle to the ground. Does not have closing burst to finish plays if ball carrier flashes across face while working to the boundary. Length won't win any extra reps with influence of a lateral gap.

Does not show idea levels of lean when working across
of blockers. Fails to show desired looseness through the shoulders to slip through a gap and get penetration through contact.

Pass Rush Counters: Does not show creativity or ability to slip off of an initial stab from pass protectors. Lacks ability to duck shoulder and diminish surface area and in general does not have required extension to discard of patient blockers in pass protection.

First Step Quickness: If able to get weight rolled forward onto the toes is capable of getting a fair amount of push out of stance. With momentum is capable of bursting through a crease if let of the chain but does not possess any notable natural explosiveness.

Feet/COD: Very deliberate with steps, doesn't show a lot of confidence in playing with feet out from underneath the hips. As a result, redirection efforts take time, are lethargic. Will lose out of stance if forces to take altered second and third step.

Versatility: Fails to win outside of one on one reps when tasked with locking horns inside and finding the football. Does not have athleticism to move around defensive set and doesn't show finesse or technical components to game in any capacity.

## FILM ASSESSMENT

Games watched: Maryland (2016), Oregon State (2016), Northwestern (2017)

Hand Technique: Lack of length is a prominent issue and is difficult to reconcile on film. Shows good punch and effective lift maneuver to shed the hands of blockers but is never going to have the length needed to press out and stack blocks.

Competitive Toughness: Pursuit skills are top notch. Is frantic (although not always efficient) in efforts to press through the LOS and locate the football. Will be seen down the field or working to the far sideline as a rally defender.

Two Gap Ability: Ability to squat and hold the POA as a defender on the line is nonexistent due to limitations with length and extension. Does not meet NFL thresholds for playing in the trenches and effectively being able to pull off of blocks.

Gap Penetration Skills: Can align in gaps and make some headway but pushing through some soft contact and ripping through into the gap. Wins have primarily come on account of quickness and leverage, could potentially have some short yardage value as a gap shooter.

Tackling: Is not a renowned finisher and does not have great short area agility to pivot and mirror a ball carrier if uncovered and facing a one on one scenario. Lack of wingspan will influence ability to wrap up ball carriers.

Flexibility: Has some nice cornering skills in tight windows courtesy of a low set of hips and naturally low built center of gravity. Will have some issues with lateral redirection thanks to quick ability to get some pace moving forward.

Pass Rush Counters: Has utilized lift with most frequency and had nice results. Otherwise wins with low pads and ability to quickly get out of stance. Is easily negated once blocker establishes a set of hands on his frame.

First Step Quickness: Has a nice first step, able to shoot past some heavy footed interior OL with speed and get hip to hip to cause some disruption at the mesh point. Does well coming out of a quick burst to sit down on the other side of the LOS but cannot transition into lateral quickness.

Feet/COD: Redirection skills should not be regarded as a strength. Is much more effective in linear situations and lacks the lightness on feet to pivot or turn with quickness.

Versatility: Is going to hold value in only a very specific approach to the game and in very specific circumstances. Failure to meet NFL measures will ensure he goes undrafted but in the right spot could get a look.

## FILM ASSESSMENT

Games watched: North Carolina State (2017), Georgia (2017), Michigan (2017)

Hand Technique: Tight quarters defender, does not flash a lot of extension or power with hands away from chest. Does utilize some strong hands to pull blockers off of position and is quick to pull blockers off of platform if caught leaning into blocks.

Competitive Toughness: Stout thanks to squatty build, but lack of extension leads to errors in handling contact and can get bubbled and uprooted with too much ease between the tackles. Does not always show great effort scraping outside to the boundary.

Two Gap Ability: Has the needed anchor to hold ground as an interior defender, although appears to be missing clean disengagement skills with efficient and consistent extension. As a result can struggle at times to get unglued and challenge the POA.

Gap Penetration Skills: Does not have the short area quickness to be asked to play disruption reps with any level of consistency. Will get ridden out of plays once hip to hip with blockers and has a hard time working back to the LOS after such instances.

Tackling: Has planted some big hits on passers when closing in through the pocket, also ability to cover ground quickly and shut down a throwing window or play is limited. Range laterally is modest, should be able to influence runs between the hashes.

Flexibility: Does have some issues with balance, will let weight get overextended and center of gravity will overtax base, tight in the core when extended forward. Has a fair level of lean and tilt to carry some speed through corners when attacking the pocket.

Pass Rush Counters: Success stems from power rushes when left in one on one situations, otherwise does not illustrate a great deal of imagination when trying to work around the corner of an IOL and find a smooth path to the passer.

First Step Quickness: Does not possess ideal explosion off of the line. In general struggles with closing burst and get off out of stance, is more of a plodder than a player capable of covering notable ground with the first step.

Feet/COD: Uninspiring ability to stop and start. Buildup speed requires some notable distance, so if a back can cut off of trajectory it is very difficult for him to find his way back into the pathway of the opponent.

Versatility: Effective in reps when able to press hard up the LOS in one on one, primarily a power player that will use size to advantage but in general does not have finesse elements or traits to supplement an "in your face" mentality and style.

## FILM ASSESSMENT

Games watched: Indiana (2016), Wisconsin (2017), Southern California (2017)

Hand Technique: Shows some nice activity with the hands as a means of swiping, sweeping and clearing blockers off of chest. Shows good initial hand fit and good activity to continue fighting for favorable space and leverage against the block.

Competitive Toughness: Stout in tight spaces. Loses functional strength and ability to hold firm at the LOS when tasked with getting off of initial platform. Likable effort and activity to get off of a block.

Two Gap Ability: Stout. The most stationary he's tasked with playing, the more effective he is going to be to squat and hold firm. Would be an idea fit on run downs to man the middle and simply squat to allow flow to go clearly behind him.

Gap Penetration Skills: Missing essential first step to push through a gap and fire out of stance. Lacks short area quickness but does illustrate desirable hand usage if aligned in a gap to force a false punch and get pads into a wedge in the POA.

Tackling: Limited tackle radius and underwhelming closing burst. Struggles to come to balance and will not mirror if caught in space against a ball carrier.

Flexibility: Stiff at the POA. Struggles to work the hips overtop of blocks and therefore has limited range and poor results trying to string out the LOS against boundary runs. Can get reach blocked quite easily as a result.

Pass Rush Counters: Push/pull and stab are two effective moves that create a crease when pressing forward and looking for a rush lane. Does not have complimentary movement skills to supplement good awareness and development of counters.

First Step Quickness: Lethargic, does not take any notable ground with first step and is missing explosive qualities to insinuate there is room for growth and development in this area. More of a block eater than penetration player.

Feet/COD: Balance is a frequent issue on tape. Shows good ability to discard at the LOS but feet narrow and deaden when trying to replace the blocker and step through blocks. Does not have a notable level of COD or burst to flatten and string out blocks.

Versatility: Fairly one dimension. Run stuffing presence in the middle that is effective eating blocks and playing between the A-gaps. Lacks mobility to offer juice as a pass rusher or the quickness to make splash plays at the mesh point.

## FILM ASSESSMENT

Games watched: Clemson (2017), Florida (2017), Southern Mississippi (2017)

Hand Technique: Has notable length, but currently illustrates little idea how to use it. Hands are all over the map and does not control blockers with a stack, instead content to just throw a punch.

Competitive Toughness: Pursuit skills are underwhelming when turning and running down the field, has been caught loafing in numerous games. Poor toughness as a defender in the B and C gap to set the LOS and help wall off the outside vs. the run.

Two Gap Ability: Has upside in this area and ideal starting role down the line may be as a two gap defender playing in the B-gap. Underwhelming hand usage negates what is promising length and extension. Needs to work on anchor at the POA as well.

Gap Penetration Skills: Does not effectively shed blocks when trying to push forward into gaps, instead running into space and allowing blockers to ride out and wash out of the play. Needs to be more aware of ball carrier pathway and apply pressure to make cut offs happen at the LOS.

Tackling: Big wingspan and promising potential. Does not have many opportunities to finish plays on account of poor mental awareness and raw skillset, did not find the football frequently and was often picked on.

Flexibility: Has a fair level of pliability to bend and contort through creases, although does show some tightness through the hips when trying to sink and anchor at the LOS. Pad level is a frequent issue at first contact, needs to drop the hips and pads.

Pass Rush Counters: Little polish in this area, shows poor awareness of how to attack blockers and instead will run into area and look to cause a collapsed pocket with power or a run fit. Easily eliminated with a strong pass set.

First Step Quickness: Does have some natural juice getting out of stance but often spent reps in a 4 point stance at FSU, which limited ability to showcase burst and acceleration out of stance. Has room for growth and polish in this area as well.

Feet/COD: Long limbs do not lend well to suddenness in short areas. Is not quick in lateral situations and will lose leverage quickly against outside zone reps or pulling OL due to inability to slide the feet with suddenness and sustain leverage on the block.

Versatility: Has some upside as an interior penetration player or as a two gap defender. Fascinating upside but is far too raw of a product to see the field. Rawness could be packaged as a plus, is able to be molded to preferences of coaching staff in NFL.

## FILM ASSESSMENT

Hand Technique: Heavy hitting hands and possesses some impressive natural length. That said, does not have precision or deliberate usage of either hands or length to create a vacancy between body and that of blocker, gets boxed into tight quarters.

Competitive Toughness: Physically stout but anchor is irregular. Can give ground if caught against a more polished interior OL who can sync up the hands and feet to create clean contact early in the rep. Struggles with recovery balance when trying to re-anchor.

Two Gap Ability: Has all of the needed tools to effectively swallow up blockers but needs significant refinement from an anchor and length perspective to stay on the ready to pull off of blocks quickly and replace to challenge the ball carrier.

Gap Penetration Skills: Is too heavy footed to be able to drive through a gap without OL having the chance to slide and shuffle to work back into the picture and successfully cut off forward progress. Is not the type of athlete to win reps with speed.

Tackling: Has good finishing habits thanks to large wingspan and a very strong grip. Will pull down ball carriers at the edge of length and has a very large influence inside of local platform in the middle.

Flexibility: Issues are present with leverage due to tightness in the hips and the constant struggle to keep the shoulder pads down. As a result he will provide blockers with a large blocking surface area to land hands. Struggles with lateral mobility due to hip tightness.

Pass Rush Counters: Very lethargic as a pass rusher. Does not showcase a whole lot of suddenness to the hands and has a poor concept of timing when trying to dial up a counter punch against blockers in the pocket.

First Step Quickness: Does not showcase desirable burst out of stance. Struggles to dictate reps with first contact and tightness in the frame results in pads popping straight up instead of firing out and away from the feet.

Feet/COD: Has a limited range due to long stride length and tightness in the lower half, will not be able to hinge or pivot or burst into a shift in momentum without having to reset the feet and realign the hips in the desired direction of pursuit.

Versatility: Should not be tasked with staying on the field for passing downs without notable reconditioning and changing of body composition, is too labored and one dimensional to be asked with getting backfield penetration.

## FILM ASSESSMENT

Games watched: West Virginia (2017), Clemson (2017), Miami (2017), Oklahoma State (2017)

Football Intelligence: Can be a bit overeager to shoot into the LOS at times, can get suckered by dummy reads. Trust in ability to read blocks and be taken to the football is excellent. Has quick processor and strong spatial awareness to anticipate cuts.

Tackling: Excellent wrap up tackler. Brings the feet, running through contact. Has been stout in head up collisions, especially in key conversion situations. Takes good angles of pursuit and consistently puts down opposition in one on one situations.

Block Shedding: Understands the concept of "give ground to gain ground". Has upper body strength to extend whilst giving a half step to extend arms and create separation before using high end mobility to work over the top of blocks.

Competitive Toughness: Can get re-routed by heavy handed blockers but does well with recovery balance and ability to parlay contact without losing footing. Explosive athlete is a heavy hitter when able to get down hill and generate momentum into the LOS.

Lateral Movement: Possesses sideline to sideline speed and the needed range to flow and still gain ground into the LOS and prevent backs from turning the corner. Short area agility to cut underneath of blocks and arrive at the ball carrier is strong as well.

Coverage Skills: Is a true weapon defending backs out of the backfield. Has rapid feet in zone coverage to plant and drive on slants coming out of the slot. Length is rangy and able to influence the throw both at the LOS and at the catch point with effectiveness.

Gap Shooting Ability: Is very dynamic in plant and drive situations, including when working downhill into the teeth of the POA. Will uncover off of contact and still challenge the ball. Has needed speed to split through a gap quickly and beat OL to landmarks as well.

Feet/COD: Has pretty rare foot quickness for an athlete of this stature. Smooth transition steps out of a read or at the top of a zone drop. Will cleanly pivot or adjust pursuit angles in space and sustain play speed to stay leveraged over the ball.

Flexibility: Highly pliable athlete. Has loose hips to unlock and carry routes up the field, either against slot receivers or backs out of the backfield. Coils well into tackles. Has some tilt to flatten and corner in the box and diminish angles trying to reach the football.

First Step Quickness: Has impressive burst and explosiveness when working as a blitzer or coming off of a flat footed read. Shows ability to quickly close in on ball carriers in tight spaces and be an effective finisher when paired with length.

## FILM ASSESSMENT

Games watched: Auburn (2017), Florida (2017), Notre Dame (2017), Mississippi State (2017), Oklahoma (2017)

Football Intelligence: Reads between the tackles are consistent and does well to execute read steps before transitioning into pursuit. Finds ideal pathways to the football on a regular basis and has become a tackle machine as a result.

Tackling: Great tackler with wrap up habits and a notable amount of power through the pads to deliver big blows. Can play the role of enforcer in the middle against shallow crossing routes and inside run. Comes to balance very well and regularly runs feet through contact to finish.

Block Shedding: Will have some troubles getting off of blocks on the second level due to a lack of length. Pop and hand placement is a non-issue, will simply struggle to disengage against more athletic linemen and get back into a pursuit role.

Competitive Toughness: Tenacious in the middle. Relentless effort playing forward and will fly up into the mesh point and impose will on ball carriers. Effort and hustle from the far side of the field are excellent to work back into a position to challenge.

Lateral Movement: Has the needed range to play isolated in the middle of the field. Does not have rare range but will have no issues covering ground between the numbers at the NFL level.

Coverage Skills: Effective in shallow drops and zone coverage. Will do well against rub concepts to concede space and allow receivers to clear while carrying route through area. Physicality at the catch point is present to jar receivers loose from the ball.

Gap Shooting Ability: Has good juice to drive forward out of a lateral scrape and challenge at the line of scrimmage. Will find gaps to press through, fundamentals of flow and charge are very strong. Has balance and power to run through lateral contact and not get washed out.

Feet/COD: Read steps are clean and will work into the line of scrimmage before snapping out of base and attacking responsibility. Transition steps when tasked with getting off the line of scrimmage in coverage are effective but not especially sudden.

Flexibility: Has adequate level of mobility, although hips can be somewhat restricted when tasked with flipping open to the field and getting depth quickly. Does much better in linear situations to sink the hips and coil through contact as a gap plugger or in tackles.

First Step Quickness: Forward burst is paired with good timing when tasked with slashing as a blitzer into the line of scrimmage. Closing burst once finding the ball or trying to zip into a crease to challenge the ball is very strong as well.

## FILM ASSESSMENT

Games watched: West Virginia (2016), Louisiana State (2017), Wisconsin (2017), Mississippi State (2017)

Football Intelligence: Has exposure in a number of roles, including playing as a space defender in pass coverage, as a pressure player and as a more traditional off ball player. Ability to key between the tackles looks to come naturally.

Tackling: Physical, particularly when putting pads in alignment with hips and stepping down hill. Will struggle at times to come to balance after uncovering from contact. Does not have a great wingspan to maximize tackle radius, which can be a concern while engaged.

Block Shedding: Length is going to be a problem, without question. Was not especially consistent in playing off of contact and using length to keep chest clean on film. Has a good coil to plug gaps but will be irregular in getting back off of contact.

Competitive Toughness: Motor is consistent and effective to stay in a pursuit role to the football. Has enough presence in between the tackles as a head up tackler to feel comfortable with challenging ball carriers head on. Can be found down field chasing down plays.

Lateral Movement: Has sideline to sideline speed, capable of being an influence working as an overtop defender, particularly off the back side and finding way back into the hip pocket of ball carriers. Will have great success as a backside defender thanks to acceleration skills.

Coverage Skills: Very fluid defender in space. Has little issue taking depth off of the line of scrimmage quickly to reach landmarks in zone coverage. Has been effective walked out into the nickel and can be used as a weapon out of a base package.

Gap Shooting Ability: Fast to flow and has good anticipation to attack open space as it develops. Has the first step quickness to vacate platform and beat climbing OL to the point of attack effectively. Has shown willingness to contort at contact and uncover in hole to challenge ball.

Feet/COD: Very comfortable with mobility and redirection skills. Athleticism is one of strongest skills and will pivot quickly thanks to sudden feet and fluid hips. Can sink the hips well and hinge effectively to carry runners across face when challenged by routes.

Flexibility: Pliable hips and little issue with disassociating upper and lower halves to keep eyes peeled in zone and play with pace. Will win with leverage and explodes out of stance due to good, low center of gravity and coil.

First Step Quickness: Has flashed the ability to stand up and win off the edge as a wide angled pressure player. Has swift close into the line of scrimmage out of read steps and should have no issue defeating angles consistently off of flat footed reads.

## FILM ASSESSMENT

Games watched: Washington (2016), Clemson (2016), Tennessee (2017), Mississippi (2017), Auburn (2017), Clemson (2017), Georgia (2017)

Football Intelligence: Continues a strong development of play diagnosis. Has developed a much cleaner feel for working in space, staying patient on flat footed reads and attacking single gaps. Two year conversion from EDGE Defender, has made great gains.

Tackling: Devastating hitter when able to get pads aligned. Sudden closing burst and heavy pads will generate fair share of loose footballs. Would like to see more
commitment to wrapping up in some instances, can be quick to look for a booming tackle.

Block Shedding: Does well when exposed to having to fight off a head up collision. Exposure as an EDGE has lent well to awareness to play with length and use hands to fight off contact and provide a crease to slide off the block.

Competitive Toughness: Sledgehammer in the middle. Prowls with intent to deliver heavy hits. Functional strength is good despite somewhat of a lean frame. Motor away from the ball and hustle to work back into plays down the field are quality traits.

Lateral Movement: Has good range, will have no issue stepping into a role in the middle at the NFL level. Loose hips flip open into the sideline with easy when pressed with pure speed and can fight back over the top as a scraping defender.

Coverage Skills: Has the mobility and movement skills to effectively take away underneath zones in the middle of the field. Has been effective disrupting stems within 5 yards, is quick to get hands on and ride out route and carry in man coverage reps.

Gap Shooting Ability: Capable of going from 0-60 in no time flat. Has grown in this area as well, plays into the teeth of the play with greater consistency, more apt to uncover and make a plus play. Quickness can be used against him, however. Needs to be selective and know when to sit.

Feet/COD: Has all the mobility in the world, superb athlete with ability to cut late and hard to work away from a block and reach the ball. Reactive drive on the ball produces a notable amount of quickness as well to get pads downhill.

Flexibility: Has a great ability to peel upper half and lean through cornering to arrive with quickness. Capable of diminishing as a gap shooting defender and prevent OL from fitting hands cleanly on the body. Capable speed rusher off the edge as well.

First Step Quickness: Burst is terrific. Will win reps as a speed rusher when tasked with being walked up onto the line of scrimmage. Will overwhelm blockers with momentum and force generated in short distances.

## FILM ASSESSMENT

Games watched: Central Florida (2016), Clemson (2016), North Carolina Central (2017). Delaware State (2017)

Football Intelligence: Is a sharp play diagnosing LB, will step into the LOS as needed and shows good grasp on how and when to adjust angles down hill. Consistently comes up to the LOS as a squared defender ready to take on challenging blockers.

Tackling: Needs to stay balanced at contact better. Although has done well to add weight through college still isn't a booming hitter with natural lower body power. More of a wrap up challenger and is prone to stopping feet prior to tackle.

Block Shedding: Still a bit tentative with stab to cause first punch and stave off blockers, would like to see more violence in first punch to roll through hips and really reset the line of scrimmage. Long arms are effective leaving space to pull off laterally.

Competitive Toughness: Can get pushed around and leaned on in tight spaces, particularly if boxed in at the LOS. More effective in space and in one on one block challenges. Motor runs extremely hot, consistently found flying to the football.

Lateral Movement: Showcases true sideline to sideline speed to influence outside the numbers. Likable quickness in short space to slip under a block and challenge the ball carrier in the backfield.

Coverage Skills: Has had high ball production, easy to see why on film. High athleticism, has retained movement skills well to have range and turn and run with receiving targets down the field. Large area of range and can be implemented to protect MOF reliably.

Gap Shooting Ability: Effective burst and anticipation to see developing crease to step forward and uncover in the backfield. Is effective with both downhill fills or as a scraper to gain ground and shoot for the back's hip pocket outside the hashes.

Feet/COD: Feet are rapid, takes very sudden steps to consistently change direction while working down into the LOS. Has sudden short area burst to spring back and mirror ball carriers in the open field when challenged with a potential cut back into the field.

Flexibility: Loose athlete, carries bulked up weight extremely well to move with natural quickness and without tightness to mirror smaller athletes on the offense. Capable of lower body tilt to lean and turn/pivot with high speeds in tight space.

First Step Quickness: Effective blitzer from both off ball and up on the LOS positioning. Gains a lot of ground with first step and pairs with flexibility to carry burst through remainder of the rep and cause a lot of disruption in the backfield.

## FILM ASSESSMENT

Games watched: North Carolina (2015), Texas A\&M (2017), Florida (2017), Clemson (2017), Georgia (2017)

Football Intelligence: Has a knack for being in the right place at the right time in coverage. Very good peripheral vision and has innate ability to take angles to find the football. Disciplined between the tackles to read keys (OL or backfield) and flow appropriately.

Tackling: Pop is present in pads courtesy of explosive skill set. Takes good angles and uncovers well in the alley to square up tackle attempts. Has overrun some reps flowing into the sideline, mostly when influenced by OL and trying to scrape over the top.

Block Shedding: More crafty than expected. Has good ability to defeat angles with first contact, blends a stiff first punch with loose body and short area quickness. Has enough leverage to squat on head up blocks and hold ground firmly.

Competitive Toughness: Impressive resiliency bouncing back from a neck injury in 2016, showed no ill effects on the field. Plays above weight class and is potent with hands and pads to deliver notable blows.

Lateral Movement: Has good but not great flow into the boundary. Doesn't always get to the corner but other times will overrun pursuit and give up a cut back. Needs to improve feel for working into the boundary as a MIKE LB.

Coverage Skills: Best coverage LB in the class, hands down. Terrific hips and ability to drop off the LOS in zone. Feels routes developing and shadows the eyes of the QB to cut down throwing windows. Has good ball skills and soft hands to convert turnovers.

Gap Shooting Ability: Has the needed first step to drive forward and uncover in the backfield. Is fairly conservative with shooting gaps into the boundary, willing to take a lane but prefers to stay over the top of the play. Will win with quickness and beat OL to the spot.

Feet/COD: Light on feet and is very nimble when tasked with cutting through traffic or pivoting in pass coverage. Footwork is clean to flip the hips and carry speed. Can put the gas pedal down and burst across the face of OL to get into gaps.

Flexibility: Hips are fluid and will win by pivoting quickly, has very impressive blend of looseness and power, courtesy of ability to unload the core and hips into contact. Will drop the hips and absorb contact when challenged with power at the LOS.

First Step Quickness: Twitchy athlete with burst needed to get into the backfield as a blitzer. Will uncover and flatten well when walked up onto the LOS as an outside rusher. Closing burst into tackles once dialed onto the football is strong.

# Tegray Scales, OB Linebacker \#8

## FILM ASSESSMENT

## Games watched: Ohio State (2016), Ohio State (2017), Michigan (2017), Penn State (2017), Virginia (2017)

Football Intelligence: Able to react and flow to keys with confidence, will get down hill or width to scrape against pulling OL well. Stays disciplined on gap responsibilities to plug and fill before trying to locate the football. Peripheral vision and field awareness of opponents is strong.

Tackling: Guilty of failing to break down in some one on one situations when scraping from the middle of the field. Physical pop in pads is notable and has good habits as a wrap up tackler in the hole. Needs to gear down sooner in open field to ensure a good challenge.

Block Shedding: Doesn't have great length but does have the leverage due to stature to squat underneath blockers and hold ground with moderate success. Will have most success by getting width into the boundary and working hips around the body of blockers.

Competitive Toughness: Plays at a million miles an hour after diagnosing the play. Will fly down in the box and stick facemask into chest of blockers to plug up gaps. Plays with a hot motor and is consistently found in pursuit from the far side of the field.

Lateral Movement: Has desirable sideline to sideline speed. Does well to not only stay leveraged against outside runs but to gain ground towards the line of scrimmage while doing so. Has needed burst to play at the WILL or the all around mobility to play the MIKE.

Coverage Skills: Has produced a good amount of ball production against the pass, testament to movement skills and ability to buzz off of the LOS and get depth in zone drops. Athletic enough to turn and run with receivers in the middle of the field (TEs and RBs).

Gap Shooting Ability: Quickness off of the second level is very strong. Will buzz down quickly once seeing blockers step down and a lane develop. Capable of generating a lot of explosiveness between read step and shoot in order to play with physical presence.

Feet/COD: Smooth, efficient steps without a lot of wasted movement. Does well to mirror jukes with active feet in head up situations. Has ability to cross face when playing forward as a blitz or rush player, will slip into interior gaps effectively.

Flexibility: Has an impressive level of bend/lean as a blitzer off the edge. Can open hips and flow laterally with speed to beat blockers to spot. Lower body mobility to absorb contact and keep feet if challenged up top.

First Step Quickness: Explosive initial step, is capable of gaining an angle on interior protection schemes or getting hip to hip with pass rushers on the outside. Has good closing range and acceleration to get out of mirror and into a tackle/challenge.

## FILM ASSESSMENT

Games watched: Southern California (2017), Wisconsin (2017), Pennsylvania State (2017), Oklahoma (2017), Iowa (2017)

Football Intelligence: Has a great eye for plays developing from tight to the line of scrimmage, understands how to flow and anticipates plays to avoid being flanked and outgunned to landmarks. Has quick reaction skills to win positioning quickly in reps.

Tackling: Tackle radius at first contact is only average on account of pedestrian size. Has explosive closing ability and overall range is a game changer on the defensive unit. Has notable pop in pads and rocks ball carriers when catching them flush.

Block Shedding: Has effective single arm stab to challenge blockers and use what length is present to keep avenue into a single gap open. Does not have great overall size or upper body power but explodes hands into chest of blockers to jolt pads and open a lateral crease to slip through.

Competitive Toughness: Shows strong pursuit skills to accelerate and chase the ball. Rally defender who has range to work back into favorable spacing close to the LOS on many plays. Ability to stand up at the point of attack is only modest, but not a complete liability.

Lateral Movement: Has true sideline to sideline burst and range. Capable of staying square to the LOS in such circumstances thanks to loose hips. Has a second gear that many 2nd level defenders would be enviable of in pursuit scraping over the top.

Coverage Skills: Wonderful hip mobility and looseness to work back into depth as needed and take away throwing windows. Has great foot quickness and looseness in the lower half to stay stride for stride against skill players pressing down the field in man coverage.

Gap Shooting Ability: Patient on platform before driving with a great first step to shoot gaps and play into the backfield. Effective in redirection skill to pivot after uncovering in the backfield to get in the hip pocket of ball carriers out of the mesh point.

Feet/COD: Feet are sudden, smooth and effective to suddenly redirect weight and sustain speed while doing so. Does well on flat footed platform to not drift or waste steps to take momentum away from the football before driving to the play.

Flexibility: Very fluid, pliable athlete in the open field. Will cut, pivot and tilt into cornering opportunities to play with a notable rate of speed in relation to the ball and teammates. Effective peeling shoulders tightly in small spaces to slip blocks and uncover on aggressive charges to the ball.

First Step Quickness: Twitchy athlete who can drive off of the second level and still win to landmarks if shooting gaps. Has ability to win with speed off the edge if tasked with playing up near the LOS or aligned over top of a Tight End.

## FILM ASSESSMENT

Games watched: Louisiana State (2016), Michigan (2016), Ohio State (2016), Iowa (2016)

Football Intelligence: Has very strong read and react skills. Play processing and discipline to reading keys frequently allows for pursuit to the football. Takes good angles as a tackler in space. Has a good feel for bodies around area to navigate through traffic.

Tackling: Very clean form tackler. Will keep eyes up to see the target and run the feet through contact. Would like to see more patience when making flat footed reads in the alley in order to mirror ball carriers and keep hips and pads aligned to minimize sliding off tackles.

Block Shedding: Needs to continue to dedicate time in the weight room to add strength. Will rip or finesse around blockers but if needed to jolt and shuck blocks is only marginally successful. Has a good deal of short area quickness to cut under blocks, however.

Competitive Toughness: Toughness should be unquestioned. Finished second half of a game with torn pectoral muscle. Effort and motor is through the roof, blue collar athlete. Simply needs to continue to work on maxing out frame, functional strength is in need of improvement.

Lateral Movement: Has sideline to sideline range. Capable of getting in the hip pocket of the ball carrier and scraping over the top of the play before gaining ground into the line of scrimmage to finish a play.

Coverage Skills: Effective primarily as a zone defender. Has the looseness in the hips and the lateral quickness to carry routes crossing in front or behind face and potentially break on throws sitting down in area. Limited efforts in turn and run coverage.

Gap Shooting Ability: Has a good first step and the burst to come shooting through and beating down blocks with quickness. Has good feel for timing up the snap count and anticipating when to come out of disguised look and get a start towards the LOS.

Feet/COD: Has a sudden redirection when diagnosing a gap and sticking foot in the ground to charge ahead. Fluid in short spaces as well, can slip through a crease laterally while scraping over the top of the play.

Flexibility: Does very well to play with low hips and low pads as needed. Clean ability to open hips away from the line of scrimmage when given a long distance landmark in zone coverage. Will coil and explode into tackle opportunities in tight spaces to hit with pop.

First Step Quickness: Burst as an up defender on the line of scrimmage is good. Quickness out of a flat footed read or squatting to process will allow for making up ground. Beats offensive linemen to the spot on boundary runs with quickness out of read step.

## FILM ASSESSMENT

Games watched: Western Kentucky (2016), UCLA (2017), Connecticut (2017), Central Florida (2017), Iowa State (2017)

Football Intelligence: Shows very good anticipation when isolated on the second level to feel short plays develop in front of face. Is willing to step down and attack a gap and challenge at the LOS in space. Versatile, shows polish in off ball situations and as a pass rusher.

Tackling: Tackle radius is limited due to lack of length and can pop up in some instances. Closing burst is excellent and offers physical challenge on ball carriers in head up situations to finish reps when offered the chance to crack down on guys in head up situations.

Block Shedding: Does not have a great deal of length to press blockers off of chest. Has needed functional strength and anchor to hold ground and squat underneath of a block to seal a gap but if tasked with pulling off laterally to challenge a ball carrier can have mixed results.

Competitive Toughness: Tireless pursuit player.
Tremendous effort off the back side or if working out of the box on quick hitting throws to the boundary. Has a multitude of ways to impact the game and should be a three down defender at the NFL level.

Lateral Movement: Has required range to impact the game outside the numbers from the MIKE position. Short area quickness is more effective than long speed, can cut and duck through a late crease effectively, although can get overambitious in such situations at times.

Coverage Skills: Has only modest burst and acceleration when having to flip the hips and carry with speed, isn't going to be an attractive option in man to man. Has the needed mobility to offer value in the short areas of the field as a robber or QB spy.

Gap Shooting Ability: Effective to crash down off the back side and flatten with effectiveness. Has had success stepping down when scraping over the top but can at times be late to fill and put self in an undesirable position, will get stuck with a two way go and having to challenge blocker.

Feet/COD: Has a quick gear down in an effort to collect momentum and pivot back to the football. Has redirection ability thanks to burst and acceleration out of a cut but doesn't have a great deal of natural foot quickness. COD is on account of power and efficient steps.

Flexibility: Has some nice lean throughout the lower body to flatten with quickness and work hips around blockers with pace and speed. Shows good hip drop prior to challenging blocks or when bracing for contact as a tackler.

First Step Quickness: Visible acceleration to explode out of flat footed base when seeing a play develop. Capable of working back into the hip of a ball carrier suddenly despite driving off of a zone drop away from the line of scrimmage. Capable of getting the edge as a rusher.

## FILM ASSESSMENT

Games watched: Ohio State (2016), Auburn (2017), South Carolina (2017), Alabama (2017), Virginia Tech (2017)

Football Intelligence: Comfortable in space. Disciplined to read keys and charge the play after processing action.
Often times sudden to the ball thanks to quick reaction skills and anticipation to feel the play. Very heady out in space to eye the football in zone coverages.

Tackling: Dynamic close to the ball, has secondary acceleration to work into position to finish plays off the back side. Does not bring same explosive power to hitting in head up situations, gets caught with high pads at point of first contact.

Block Shedding: Will struggle to discard offensive linemen at the NFL level. Loses appeal when trying to filter through trash and find clear pathways to the football in the box. Lacks strength and power to press and get extended against offense linemen.

Competitive Toughness: Plays fast to the boundary,
consistently quick to get overtop and force runs back inside. Great pursuit player from the backside. Transitions out of zone drops and into a pursuit role with regularity.

Lateral Movement: Scrape ability is very strong in space. Ability to work over the top of high volume is more in question, easily rerouted. Has good short area quickness to mirror ball carriers when isolated as a tackler in space.

Coverage Skills: Very fluid. Has clean COD skills and sudden transitions to break on throws into his area. Has a favorable skill set for playing turn and run coverage in the middle of the field against Tight Ends. Great ball production and several INTs returned for TDs.

Gap Shooting Ability: Much more effective shooting in off the edge as a nickel/flexed defender than trying to come downhill in between the tackles. Has a good first step to get forward and destroy blocking angles of blockers trying to climb to the second level.

Feet/COD: Very light on feet. Shows comfort to step out and collect momentum on extreme angles in the lower half. Shows quickness to tuck up underneath potential blockers and challenge ball carriers on screens to the boundary or outside runs.

Flexibility: Shows very loose hips to hinge and get notable depth off of platform in zone drops. Capable of covering notable amount of ground in the intermediates as a drop off zone defender, keeping effective play thanks to ability to keep eyes back into the backfield.

First Step Quickness: Very quick to step off of platform. Covers good ground with first steps out of run reads and shows effective burst as a blitz player. Can be used in such an area up the barrel of the formation and off the edge from a man to man alignment.

## Kyle Crabbs 2018 NFLDraft Report <br> <br> Shaquem Griffin, OB Linebacker \#18

 <br> <br> Shaquem Griffin, OB Linebacker \#18}
## FILM ASSESSMENT

Games watched: Memphis (2017), South Florida (2017), Auburn (2017), Maryland (2017)

Football Intelligence: Has very strong nose for play, has done well to work through preparations to mask physical limitations and consistently processes plays developing and is quick to move and beat blockers to a spot.

Tackling: Will struggle to finish some opportunities due to inability to grab with hand. Has quick closing burst and a good level of pop in the pads to bump down ball carriers. Needs to have uncontested tackle challenges to be consistent.

Block Shedding: Ability to stack blocks is naturally an issue. Has problems with finishing a shed as a penetration player due to inability to challenge with one side. Will not be useful as a gap plugger or a player asked to press and disengage at the POA.

Competitive Toughness: Impressive young man who has overcome so much to reach this point. Has a fearless approach and does well in efforts to physically challenge competition. Has terrific motor and pursuit skills as a rally defender.

Lateral Movement: Has very good pursuit skills but angles are sometimes too linear to the football, needs to embrace a more steady initial charge to the football to keep leverage on the run as a back side defender.

Coverage Skills: Good movement skills in zone coverage, has good peripheral vision to continue to sink and take away a second level throwing lane. Ability to contest the ball when going to his right at the catch point is going to be problematic.

Gap Shooting Ability: Has great short area quickness and ability to slip up inside of potential blockers and crash across face. Has good ability to rip through contact and uncover across face of the blocker. Initial redirection skills create a lot of false steps.

Feet/COD: Sudden, light feet with nimble skills to carry frame with grace and speed. Has ability to pivot in tight spaces without much deceleration and as a result is a great athlete in the open field as a space defender.

Flexibility: Has very good disassociation between the hips and shoulders, will squeeze through small spaces with no issue and has ability to corner with speed and win off the edge as a speed rusher against more lethargic offensive tackles.

First Step Quickness: Very good burst off the line of scrimmage. Has short area acceleration to blow past tackles at the line if walked up to the outside of the formation. Quickness allows for wins from the second level to push through gaps with quickness as well.

## FILM ASSESSMENT

Games watched: Houston (2016), Memphis (2017), Temple (2017), Missouri (2017)

Football Intelligence: Confident in reads and does well to follow initial key to execute before transitioning to find the football. Has done well to become consistent in playing team defense first instead of hunting for the football.

Tackling: Powerful hitter with ability to drop the shoulder and intimidate ball carriers of any flavor. Has booming presence as a down hill thumper and is a true intimidator in the middle of the field. Lateral radius is about average, doesn't have high end burst or length to add extra layer.

Block Shedding: Does well to stay grounded and push blockers into a firm control before trying to find the football. Will get enveloped by some more long, powerful blockers due to a lack of length to sustain control.

Competitive Toughness: Impressive, blue collar attitude and leader on the field. Plays with fire and consistently jars heavier blockers to go toe to toe and hold ground in the trenches. Does a lot of dirty work in the run game. Plays with a big presence.

Lateral Movement: Range should be regarded as effective between the numbers. Has awareness when scraping to adjust pursuit angles over top to sustain leverage but overall area of influence is not conducive to playing an isolated MIKE LB.

Coverage Skills: Is still somewhat tight throughout the hips and doesn't show blue chip explosiveness as an athlete, but can be effective in zone drops due to anticipation, peripheral vision and dropped weight from 2016. Short area zone defender can be on the field on early downs.

Gap Shooting Ability: Shows some strong anticipation as creases develop between the tackles to step down on single gap responsibilities. Will reset the line of scrimmage with heavy hands and good pads. Is not super twitchy to uncover in the backfield but as a slashing fill player will do the job.

Feet/COD: Feet are deliberate and effective when approaching contact. Does well to square up and come to balance in space. Does not have overly rapid steps and ability to plant and drive laterally to pivot is hindered by some tightness through the hips.

Flexibility: Doesn't illustrate ideal amount of hip hinge. Improvements are notable between 2016 and 2017 due to shedding some weight to remodel frame; adding an added element in space. Won't win cornering off the edge as a rusher due to lack of lean to diminish surface.

First Step Quickness: Has a modest initial step but build up speed and momentum do allow for some crushing hits once up to top speed. Does not show a lot of juice to beat pass protections initially but will win on delayed blitzes after line commits.

## FILM ASSESSMENT

Games watched: Southern California (2016), Ohio State (2017), Michigan (2017), Washington (2017)

Football Intelligence: Given responsibilities as both a gap shooting LB and as an overhang scrape defender to play sideline to sideline. More effective playing into a single gap than when asked to process the play and key to meet the football with anticipation.

Tackling: Sturdy tackler. Has good boom in tight spaces to neutralize ball carriers' forward push and prevent further gains after contact. Good habits as a wrap up tackler and does show an awareness to the location of the football to attack and look for a turnover.

Block Shedding: Does not show a lot of lateral mobility to transition from a punch vs. a blocker to shed and discard of the block. Will need to establish more effective counters with hands to pull blockers off of set if unable to work hips around the block.

Competitive Toughness: Is a tough banger between the tackles, fully capable of stepping down and sealing a gap as a plug defender. Hustle and effort are both trademark traits, does very well to make an effort to log the tackle and finish a play.

Lateral Movement: Does not have a great deal of range if isolated as the MIKE alone on the second level. Lacking in the burst and ability to scrape cleanly over the top of blocks to make an impact there. Short area movement skills are deliberate, not dynamic.

Coverage Skills: Very stiff in the hips, is going to labor with turning to run with receivers up the seam. Does not show a good deal of lateral mobility to carry routes through area in the MOF and does not have burst to stick foot in the ground and drive on a throw.

Gap Shooting Ability: Has good balance to step down into a gap between the tackles and stay balanced and square to the LOS. Lack of burst and explosiveness is notable and prevents big time collisions at the POA when stepping down off of flat footed reads.

Feet/COD: Feet labor when tasked with moving away from the LOS. Has linear pursuit skills but when forced to bend back against momentum and redirect to mirror ball carriers will lose angles and struggles to work back into the play.

Flexibility: Tight through the hips. Requires hips and pads aligned in order to carry weight with acceleration skills and push into the boundary, which then limits ability to peel back into the field. Has difficulty opening hips to zone landmarks and keeping eyes in the backfield at same time.

First Step Quickness: Is not a notably explosive athlete. Has modest ability to push through a gap early as a blitz defender if given the green light immediately at the snap without having to key the play.

## FILM ASSESSMENT

Games watched: Southern California (2016), Auburn (2016), Florida State (2017), Texas A\&M (2017), Mississippi (2017)

Football Intelligence: Does well to trust keys and take initial movement to flow in direction of responsibility. Quick to identify mis-information and work eyes back to the football Has good patience along the LOS to not over pursue and stay in a favorable position to finish.

Tackling: Has slid off of some tackles due to an apparent lack of length to finish a wrap up tackle in head up situations. Has great pop in pads and does well to carry into pursuit with good angles. Stays balanced and is not one to overrun the ball carrier.

Block Shedding: Has trouble sustaining balance in situations trying to pull off of offensive linemen. Will rip and work hips around when flowing into the sideline but in head up situations and short area sheds has shown some issues with length.

Competitive Toughness: Work ethic illustrated with a rapid turnaround from a torn ACL in December 2016, was one of best players on field for Game 1 in 2017. Heavy hitter in head up situations. Shows excellent pursuit and motor to chase down the ball.

Lateral Movement: Has enough scrape ability to influence runs working out into the boundary, although more speedy backs can potentially turn the corner on him. Pacing is best on the second level, where able to work fully unimpeded by blockers.

Coverage Skills: Has surprising level of hip hinge and has effective zone drops to buzz into the middle of the field. Shows peripheral vision to flow laterally and carry routes through needed area. Limited in turn and run ability if challenged up the field but can cover backs in the flat.

Gap Shooting Ability: In one gap situations is highly effective playing down hill and plugging blockers to seal. Most of success has come as a patient second level scrape defender, where lateral mobility and finishing skills prevent big gains.

Feet/COD: Feet are efficient. Does not show a lot of springy change of direction skills but rather wins with pace and patience. Has good footwork to work over the top of a block or flip the hips and carry out into zone coverage.

Flexibility: Hips are most loose working away from the LOS. Doesn't show much in the way of looseness throughout the feet to play with legs away from under center of gravity for dynamic change of direction skills.

First Step Quickness: Has able initial acceleration skills. Closing ability when flying into a tackle challenge is useful and effective to prevent backs from gaining a late angle as a runner.

## FILM ASSESSMENT

Games watched: Washington (2015), Southern California (2017), UCLA (2017), Oregon (2017)

Football Intelligence: Is not consistent with reads, at times will get caught trying to cover a teammates responsibility and lose an opponent creeping through peripheral vision. Has a good grasp on downhill plug concepts and understands value of taking on blockers in the hole.

Tackling: At times is prone to bodying a ball carrier instead of using wingspan to wrap up. Pursuit skills are strong and has a notable range as a MOF defender. Good pop in the pads when able to catch ball carriers flush, needs to simply stop searching for big hits.

Block Shedding: Has a physical thump with pads and shows great anchor thanks to aggressive initial challenge on blockers between the tackles. Does not showcase great length but can press with hands and disengage with upper body strength.

Competitive Toughness: When tasked with playing firmly between the tackles offers a good deal of sturdiness and ability to hold down gaps. Has a great motor and scrapes laterally with effort to get involved in plays stretching outside the hashes.

Lateral Movement: Offers a good deal of range, although was more dynamic and sudden prior to 2016 INJ. If able to return to 2015 form would offer notable upside as a MIKE LB in the middle of the field to play sideline to sideline.

Coverage Skills: Very fluid movement skills, although needs to get eyes back to the passer once hitting the top of initial landmark. Peripheral feel for routes banging through space behind field of vision will temper results to hinge and carry a route through the MOF to contest a throw.

Gap Shooting Ability: Has proven ability to climb forward when scraping over the top and press into the backfield to challenge the ball carrier. Burst from before 2016 INJ is not fully back and as a result will attempt to cut under some blocks and won't get home.

Feet/COD: Feet are smooth and fluid. Very likable in ability to hinge and get depth off of the LOS quickly. Can let feet get stuck in the mud on flat footed reads and not slide to get over top of a potential block, but issue is a mental error and not a movement restriction.

Flexibility: Hips show a good deal of hinge to open quickly and enable a quick drop off of platform and carry vertical stems up the hash against slot receivers. Shows good coil and hip drop at the POA to anchor low and explode through contact.

First Step Quickness: Doesn't offer the exciting burst once previewed as a sophomore. Athletic ability still enables some suddenness and swift maneuvering to slip blocks but will need to vet the medicals to determine if fully healed or not.

## FILM ASSESSMENT

Games watched: Florida (2016), Alabama (2017), Georgia (2017), South Carolina (2017)

Football Intelligence: Has been bounced around Vandy defense last three years, starting in three different roles. Indicative of a sharp football mind, but execution and play recognition skills are still something in development due to changing roles.

Tackling: Irregular results when trying to step down into the LOS. Has overrun a number of tackles with an aggressive scrape and missed easy clean up opportunities. Has the sturdy build to effectively square up ball carriers in the alley, however .

Block Shedding: Has desirable length to press and extend arms but overall struggles with the prospect of giving ground to gain ground and separating from offensive linemen when trying to lock horns. Needs a more compact punch with hands to attack blockers.

Competitive Toughness: Plays hard and plays fast but physical presence in the box is not notable. Catches a lot of blocks on his own side of the LOS, struggles to shed and has failed to wrap up and finish tackle opportunities on a number of occasions.

Lateral Movement: Has good scape speed and can find way back into the play if left on the back side. Has good acceleration skills when provided with a straight line path to the football.

Coverage Skills: Has great change of direction skills and ample experience working on the back end thanks to history at Safety. Successful to squeeze routes by RBs out of the backfield and quickly close down extra space.

Gap Shooting Ability: Is late to react to a developing crease, is not going to be able to get into the teeth of the LOS before pulling OL or a fullback hits the POA. First step quickness is present to win with quickness if tasked with run blitzes.

Feet/COD: Carries weight extremely well, has some spring to lateral steps and is capable of flipping hips open with quickness to gain ground into the boundary. Footwork stepping down into the LOS does cause some delay in trying to transition out of read steps.

Flexibility: Lateral hinge is strong to open and change directions effectively, will get up the field as a coverage defender with grace and quickness. Would like to see a better pad level when attempting to tackle in the box to prevent compact runners from bouncing off.

First Step Quickness: Twitchy athlete, as evidenced by athletic testing. Notable spring out of stance if confident in read or if turning to run and carry out a pass coverage responsibility away from the line of scrimmage.

## FILM ASSESSMENT

Games watched: Minnesota (2016), Texas (2017), Pennsylvania State (2017), Michigan (2017)

Football Intelligence: Doesn't always trust keys, at times can be a bit too nosey on mesh point action. Does not show a good feel for route development in peripherals, must see player progressing down the field. Patience in space is very good to allow ball carriers to declare.

Tackling: Is missing that extra juice to close in and finish plays when scraping sideline to sideline. Has good grasp and physical collisions with pads to stonewall ball carriers in place. Shows good ability to wrestle down ball carrier promptly in one on one.

Block Shedding: Lack of length is a prominent issue on film. Has violent hands and aggressive counters to sweep clear chest but overall lack of length neuters separation skills and complicates efforts to get unstuck off of blocks on the second level or at the POA.

Competitive Toughness: Visible team leader. Animated in efforts to keep teammates engaged in the game. Has great fire and hustle, blue collar attitude to find the football. Functional strength is surprisingly serviceable considering stature, plays with leverage in hips.

Lateral Movement: Does not have the needed lateral flow to play the MIKE. Will get beat around the corner and is forced to bow angles of pursuit up the field to try to find a way to challenge the play. Will need to be protected to the boundary.

Coverage Skills: Fair amount of ball production throughout career. Has loose hips to get some depth and drop in coverage, is more reliable in man vs. backs than playing zone with eyes away from opposing players. Lacks length to reach and extend to influence throws.

Gap Shooting Ability: Does not have great explosiveness and at times will run self out of the play trying to shoot inside. Is more consistent as an overhang linebacker to allow plays to develop and then proceed to attack.

Feet/COD: Smooth athlete with ability to dart across the face of blockers with quickness. Has good fluidity to stick foot in the ground and pivot as a means of countering a ball carrier. Effective working away from the LOS in intermediate areas of the field thanks to light feet.

Flexibility: Does not stand out for better or for worse when having to open hips and carry routes off of the LOS. Has more success in lateral role as compared to having to get a lot of depth at the snap.

First Step Quickness: Burst is better with a bit of momentum built into the LOS as a blitzer. Will see a developed gap and shoot hard to win positioning. Natural release and burst out of read steps is only pedestrian, not an asset.

## FILM ASSESSMENT

Football Intelligence: Has a bit of a delay between seeing keys in action and pulling the trigger, often times hop stepping out of his read step and into action. Has good feel for routes when dropping off of the LOS in zone coverage to find area to contest the throw.

Tackling: Is not a big boomer but does show some nice habits as a tackler thanks to quick closing burst to diminish angles in pursuit and requisite wingspan to wrap up the ball carrier. Would like to see feet run through contact with greater frequency.

Block Shedding: Does not have a lot of pop in the hands. Prone to giving too much ground trying to pull off of a blocker and will be bubbled back at the POA as a result. Needs to focus on improvement of initial stab.

Competitive Toughness: Long time starter for the Bruins, showing impressive durability and longevity at the college level. Pursuit and functional strength are not always running hot, needs to harness energy into taking good, aggressive angles.

Lateral Movement: Has great pursuit skills when able to get on his horse and chase down the play unimpeded. Has needed burst and long speed to run down plays from the backside. 4-3 WILL looks to be best role due to instinctual issues and range.

Coverage Skills: Movement skills are strong, although lateral mobility and flexibility are not as strong as linear explosiveness and burst in straight line situations. Would be best served playing zone coverage in the underneath areas of the field.

Gap Shooting Ability: Has the first step quickness to shoot a gap and uncover to meet ball carriers at the mesh point as a run blitzer. Too complacent on the second level to catch blocks and ball carriers, need to see more intent to come down hill earlier in reps.

Feet/COD: Has needed COD but is not overly twitchy or springy in reps when tasked with changing direction or cutting to mirror the ball. Build up speed is required if looking to pivot back into the field and stay in pursuit on cutback angles.

Flexibility: Hips don't have great mobility but does have enough hinge to be able to flip and carry a route through in zone coverage. Has good natural leverage courtesy of frame but does get hips low on tackle challenges.

First Step Quickness: Has a great burst out of stance if free to rush or pursue immediately at the snap. Plus athlete in linear situations and able to quickly get hip to hip with blockers at the POA.

## FILM ASSESSMENT

Games watched: Sam Houston State (2017), James Madison (2017), Youngstown State (2017), South Dakota State (2017)

Football Intelligence: Has good technical discipline to stay in position and is a comfortable athlete in space. Needs to have more aggression to shoot gaps prematurely and meet the ball carrier, can be guilty of becoming a chase defender and giving up angles.

Tackling: Is not a firm hitting defender, looks to use hands to wrap up but doesn't show great strength in situations needed to lasso ball carrier. Will slip off lateral challenges. Has poor power in the pads and will give up yards trying to challenge defenders head up.

Block Shedding: Does not showcase needed power in hands to punch and jolt blockers to create space needed to disengage and get off of blocks and back into pursuit. Inability to offset first contact ruins many reps and chances to get a second effort tackle.

Competitive Toughness: Has a very large area of range and influence as both a run and pass defender. Physicality is a work in progress, needs to be re-worked mentally to embrace more contact and dictate reps with strength and pads.

Lateral Movement: Sideline to sideline ability. Would like to see focus added to start gaining ground into the LOS when scraping to minimize gains when back does turn the ball up the field. Has a good short area COD as well to cross face of blockers as a blitzer.

Coverage Skills: Has smooth hips and good acceleration skills to reach far ranging landmarks. Has the needed athletic ability to mirror in short spaces and flip the hips to carry routes crossing through zone area. Has good turn and run athletic ability as well.

Gap Shooting Ability: Never saw a gap appealing enough to charge into. Likes to play over the top and scrape through on the second level to challenge plays instead of forcing way through a developing crease to make plays on the plus side of the LOS.

Feet/COD: Very fluid in space. Has good initial transitions out of read steps to hinge the hips open and fly out of landmarks to get depth against the pass. Feet collect weight well and shows good ability to gather balance and redirect out in space.

Flexibility: Highly fluid. Has no issues with turning hips up the field to carry vertical route stems, has ability to still keep eyes back towards the LOS in such situations. Has needed range of motion to contort and reach for the football when targeted overtop.

First Step Quickness: Surprising lack of initial juice for such a strong athlete, is more of a smooth accelerator than an explosive player at first reaction to click and close on the football.

## FILM ASSESSMENT

Games watched: North Dakota State (2016), Iowa State (2016), Wisconsin (2016), Wyoming (2017), Penn State (2017), Ohio State (2017)

Football Intelligence: Patience shows up on the second level. Does well to avoid jumping down into gaps prematurely and run out of play. Has good field awareness and takes responsible pursuit angles to the football. Calls adjustments at the LOS.

Tackling: Lack of closing burst will cause problems, will often leave feet trying to cover final distance to the ball and miss finish. Strong grasp when greeting ball carriers square and has good body posture when flowing down hill to clean up the ball.

Block Shedding: Doesn't illustrate a desirable level of length or power in hands to get chest clear once locking horns with a climbing offensive lineman. Has some savvy counters with hand usage to slip initial punch but is typically negated after run fit is established.

Competitive Toughness: Blue collar mentality, relentless effort player. Rarely caught letting off the gas in pursuit, even up the backside. Does not play with notable play strength, mental toughness is notably higher than physical presence.

Lateral Movement: Too often caught giving up the corner to ball carriers on boundary runs. Feet get stuck in the mud when trying to drive out of a flat footed read of the mesh point. Would not recommend as a MIKE option as a result of delays and issues staying in ball carrier's hip.

Coverage Skills: Does not appear to have the mobility to flip hips and carry athletic receivers up the middle of the field. Eye discipline is good to shadow and be effective as a shallow zone defender and squat to occupy throwing lanes.

Gap Shooting Ability: Does not have first step to win an obvious shoot at the line but instead does have some success thanks to timing. Is not an aggressive gap plugger or one to fly in and blow up a lead blocker with pads, asked to scrape and clean side to side instead.

Feet/COD: Feet are heavy, particularly in the open field when trying to shadow skill players. Does not have a lot of spring in short area drive steps and will not be able to consistently work across the face of blockers.

Flexibility: Hips are notably tight when trying to flip and mirror with receivers up the sideline. Has issues with recovering from commitments in momentum due to high hips and ineffective pad level.

First Step Quickness: Does not possess natural quickness as an athlete or ability to gain ground. As a result will be an easy target for climbing OL or enable ball carriers to shake one on one in the open field. Success comes from timing rather than athletic ability.

## FILM ASSESSMENT

Games watched: Connecticut (2016), Central Florida (2017), Tulsa (2017)

Football Intelligence: Play diagnosis on runs between the tackles is strong, showing a good understanding of where blocking schemes are going to carry the ball carrier. Shows much less confidence when tasked with operating out in space against the pass.

Tackling: Does not run the feet through contact, rather going for strong wrap up attempts and dead legging the ball carrier to hold up and wrestle to the ground. Does not possess notable hitting power and more powerful backs can run through challenges.

Block Shedding: Does not showcase desirable length to punch and extend as a means of creating separation between pads. Does not have any discernable hand counters to avoid an initial punch from blockers, either.

Competitive Toughness: Tough as nails with bulldog mentality, although ability to cash checks mind writes is not consistent. Love the enthusiasm and effort he brings, but lacks strength, length, hand usage and more to be a true hard nosed player.

Lateral Movement: Can get beaten to the corner. Does not have great true speed and lacks any burst when trying to stay over the top of a play. Can be slippery in tight spaces but success is more on account of vision and anticipation than physical skill.

Coverage Skills: Can get tunnel vision and limited athleticism shows up when trying to pivot or carry a skill player out of a break. Has a hard time turning and running with TEs or RBs due to limited athletic abilities.

Gap Shooting Ability: Shows good anticipation and ability to step down out of run reads to slip through gaps. Urgency to close to the ball is very strong. Ability to play off of contact, however, is a big limitation to game and needs further development/attention.

Feet/COD: Feet are heavy out in space. Has a hard time when tasked with planting and driving to stay on the hip of a ball carrier, either after cut in the backfield or when trying to stay over top of a route run out of the backfield. Non-explosive athlete.

Flexibility: Tight throughout the hips. Build is somewhat frumpy and doesn't have the athletic ability to be a space defender in the NFL. Does not show well when tasked with hinging for depth away from the LOS, limited pass down abilities.

First Step Quickness: Lacks explosiveness. Is not going to be taking any OL by surprise as a second level blitzer in the run game. Missing needed second gear to kick in when closing against the run as a tackler.

## FILM ASSESSMENT

Games watched: Rutgers (2017), Stanford (2017), Washington State (2017), Pennsylvania State (2017)

Football Intelligence: Guilty of getting wires crossed at times while trying to gauge the mesh point. Spent a lot of time on an island in 2017 in the MOF and struggled to scrape and fill with appropriate angles and timing to keep gaps sealed.

Tackling: Can hit like a ton of bricks when able to align a clean challenge in the alley. Very rapid click and close ability to play down hill and challenge ball carriers if a clear and obvious pathway is provided. Needs to have feet set behind hips to finish tackles with consistency.

Block Shedding: Struggles to play off of blocks with consistency and does not possess the upper body strength to press and disengage once contacted. Does have ability to play down into blocks and seal gaps with forceful run fills.

Competitive Toughness: Plays fearless. Has no qualms about putting face in the fire and plugging up gaps with pads. Hustle and pursuit skills are strong to try to work back into plays if the football goes away.

Lateral Movement: Does not possess any notable sideline to sideline speed. Combination of processor, tight angles and tight hips, all of which combine for a player better suited to stay in run fits between the tackles if possible.

Coverage Skills: Poor peripheral vision and struggles when tasked with playing away from the LOS. Does not have a great deal of anticipation to feel route development into zone coverage and lacks stickiness in man to man against TEs and RBs.

Gap Shooting Ability: Terrific aggressiveness and quickness to play into a gap, is fearless of potential collisions with blockers in the hole. Diagnosis and ability to process where a gap will develop beforehand is something that requires more work.

Feet/COD: Overextends feet when playing in pursuit, can be cut off of and bite hard when trying to flow out into the boundary with a ball carrier. When taking in reads from flat footed platform has ability to spring and explode into a challenge.

Flexibility: Struggles to hinge the hips out in space and turn to get width with quickness. Instead is linear in pursuit and in angles, hip tightness is a huge restrictor from playing with more lateral range and being more effective as a scrape defender.

First Step Quickness: Has good acceleration out of read if given the green light to play into the LOS immediately. Has a quick burst off the second level and is able to beat OL to a gap spot if tasked with blitzing the pocket.

## FILM ASSESSMENT

Games watched: Oregon (2016), Virginia Tech (2016), Miami FL (2016), Indiana (2017), Louisville (2017)

Football Intelligence: Appears to get caught peeking at the mesh point too often, causing some late reactions to offensive line flow and developing creases to shoot. Peripheral vision is not especially strong. More of a reactionary chase defender than a play processor.

Tackling: Can struggle to finish plays when trying to chase down laterally; slipped off a number of tackles in the alley due to poor wrap up skills. Pads carry a lot of pop and when working into the teeth of the run is able to body ball carriers and finish with confidence.

Block Shedding: Offers very little in effectiveness to get off of blocks with hands. Is too complacent when challenged physically, opts to take the path of least resistance and fade away from the POA instead of rolling hips and attempting to anchor.

Competitive Toughness: Motor and pursuit are positive traits, does well to work back into position to clean up plays. Would like to see a greater aggression into the LOS on between the tackle runs to mitigate yards. Needs to be much better playing off of contact and blockers.

Lateral Movement: Has good ability to scrape over the top as a backside pursuit player. Capable of jumping across face with forward momentum to get into gaps and try to uncover to challenge the ball carrier. Straight line speed into sideline is functional but not especially strong.

Coverage Skills: Looks to play tight through the hips, struggling to get lateral width when routes are run through vicinity. Physical when planting and driving forward to challenge receivers at the catch point.

Gap Shooting Ability: Has proven capable of getting into the backfield with strong TFL production but is not consistent; although some of that may be scheme and play call related. Has a good first step but doesn't play off of contact well to push through small creases to challenge.

Feet/COD: Is not overly sudden in terms of backpedal or transition steps. Has good initial quickness when driving forward but lateral quickness and explosiveness is not a notable trait either.

Flexibility: Capable of dropping the pads low and getting underneath of ball carriers in tight spaces. When isolated in space is much more exposed to poor transitions, does not appear to have the needed lower body mobility to quickly get depth in zone.

First Step Quickness: When deciding to attack has good ability to beat offensive linemen to the spot, but often times initial quickness is handcuffed with eyes reading mesh point or waiting for plays to develop.

## FILM ASSESSMENT

Games watched: Georgia (2016), Stanford (2016), California (2017), Louisville (2017)

Football Intelligence: Patient along the LOS to allow backs to declare a gap before playing forward into pursuit. Does not have notable anticipation to scrape and fill forward to meet backs at the LOS. Struggles with peripheral vision to see developments ahead of time.

Tackling: Strong head up tackler. Brings a lot of pop behind pads to jar ball carriers. Has good awareness of where the football is and making a point to attack the ball while finishing the rep. Foot speed can be a limiting factor while blocking in space.

Block Shedding: Uses hands well to play off of cut blocks at feet. Has a good anchor and power to absorb a block on the second level and hold firm, capable of stacking head up. Will take path of least resistance and cut under blocks to the boundary, taking self out of play.

Competitive Toughness: Is a banger on the inside. Likes to buzz down and drop a pad to seal the pile. Pursuit in space at times does not carry the same urgency as when tasked with playing forward at the snap on penetration opportunities.

Lateral Movement: Does not appear to have the lateral flow ability to work sideline to sideline, limiting role as a MIKE. Most consistent working between the tackles as an overhang defender.

Coverage Skills: Is tight in the hips and struggles to carry receivers through zones. Will get handcuffed against more mobile passers, trying to split the difference between contain and zone. Can be exploited in the passing game as a result.

Gap Shooting Ability: As a run blitzer shows good timing and a nice ability to duck shoulder through contact to uncover. When scraping over the top of the play does not look to have ability to gain ground and flow with needed speed to hold contain.

Feet/COD: Does not have a lot of fluidity when tasked with planting and redirecting momentum. Lacks foot quickness to gear back up and regain pursuit speed if caught in over-pursuit and back makes cut off of hip.

Flexibility: Will struggle to get depth in pass drops due to tightness. More of a linear athlete than one capable of being successful and consistent in space against NFL competition. Anchors well with hip drop when challenged in linear situations.

First Step Quickness: Good burst when able to stick foot in the ground and drive on action away from face. Same cannot be said in coverage when reacting to a throw in general vicinity.

## FILM ASSESSMENT

Games watched: Clemson (2016), Kentucky (2016), North Carolina State (2017), Syracuse (2017), Virginia (2017)

Football Intelligence: Does not show a high end ability to diagnose with quickness, is more of a visual pursuit player instead of anticipating offensive flow to greet the football in the backfield.

Tackling: Poor habits when squaring up the ball carrier in the alley. Can overshoot landmarks and other times will completely whiff on contact. Does not translate a lot of power from pads into body of ball carrier, will slide off some attempts.

Block Shedding: More successful in space to cut around a blocker as compared to playing through contact with hands and lower body power. Needs to establish a punch onto blockers to offset initial momentum and give window to play laterally off contact.

Competitive Toughness: Needs to get tougher in traffic. Preference to play around traffic instead of through traffic will result in running self out of many plays. Doesn't set the tone with pads as a tackler or plug player. Hustle from the back side leave something more desired.

Lateral Movement: Natural movement skills are fine. Poor reps are a product of poor motor and effort off the back side or in space. Has mobility needed to contribute between the numbers.

Coverage Skills: Has a nice ability to flip open the hips and react as the QB's eyes lock onto a target. Natural transition out of backpedal and into a challenge of the ball. Does not have a great deal of turn and run athleticism to carry receivers down the field.

Gap Shooting Ability: Plays soft working down into the hole, doesn't charge with the intent to blow through contact and as a result will get uprooted and pushed off of spot to produce a crease for ball carriers. Needs to be more confident of pad power.

Feet/COD: Feet have some natural lightness. Is capable of playing in zone coverage away from the LOS. Has short area agility to undercut a block and try to reach the ball carrier in space.

Flexibility: Reasonable amount of fluidity. Has hip hinge needed to pivot with quickness and quickly react to the ball. Needs to stay aware of hip drop and get more grounded when taking on contact as a means of coiling through bodies with power.

First Step Quickness: Linear explosiveness has not been consistently showcased on film. Doesn't react with desirable burst and drive to close ground with quickness and prevent acquisition of additional yardage by opposing ball carriers.

N/A OBLB Combine Avg. (03-16):

Football Intelligence: Visual pursuit player outside the tackles. Has flashes of anticipation and willingness to step down into developing gaps between the tackles, but makes plays as more of a thumper than someone to play off of contact and find the football in pursuit.

Tackling: Struggles with mirroring in the open field. Will overrun tackle attempts when scraping laterally to the boundary due to tightness in the lower half and difficulty to re-collect momentum to come to balance prior to first contact.

Block Shedding: Very stout at the POA. Shows impressive extension skills and desirable upper body strength to press defenders off of chest and uncover between the tackles. Has effective hand sweep to clear and resume in pursuit.

Competitive Toughness: Smash-mouth style of player. Effective largely in downhill situations to crash into blockers and use first step quickness to generate momentum and create push to seal interior gaps in the run game.

Lateral Movement: Does not have the needed range to play isolated in the middle. Instead is most effective in tighter spaces between the tackles. Lacking in the needed long speed and effectiveness once tasked with flipping hips into boundary to sit down and mirror runs.

## FILM ASSESSMENT

Games watched: Texas A\&M (2016), Clemson (2017), Georgia (2017)
Coverage Skills: Does not offer much in the way of mobility or range as a man or zone defender on the second level. Tight, lacking in range and shows tightness in the hips when tasked with turning and bailing away from the LOS.

Gap Shooting Ability: Good linear shoot to burst through a gap and uncover to challenge ball carriers in head up situations. Does well between the tackles to gather a full head of steam and press through contact to uncover and address the ball carrier.

Feet/COD: Feet are labored and does not offer a lot of twitch in tight spaces. Will be a one gap run defender to step downhill and address the LOS with pads square, isn't going to be able to shift late and keep hips and pads square on any ball carriers.

Flexibility: Has notable restrictions in space. Has issues with hinging and getting width with quickness after reading the mesh point on runs testing the boundary. Possesses natural pad level and leverage when square to the LOS thanks to squatty build.

First Step Quickness: Has initial quickness and is quick to generate momentum to pop into blockers. Is not overly swift when trying to step down from the second level and will struggle to beat blockers to a spot when looking to shoot gaps.

## FILM ASSESSMENT

Games watched: Southern California (2017), Wisconsin (2017), Pennsylvania State (2017), Oklahoma (2017), Iowa (2017)

Football Intelligence: Doesn't show a lot of trust in reads to deliver to the football after the snap. Is more of a visual player currently, must see the ball to break on the ball. Peripheral vision hangs him out to dry when working in space.

Tackling: Quick burst to close in and challenge the football. Carries speed well and is capable of coming to balance out of a run in order to align hits. Sturdy pads with some ability to boom the ball.

Block Shedding: Is ineffective with hands. Prone to trying to run around blockers instead of challenging head up and forcing blockers to truly address short area quickness and movement skills. Doesn't play with desirable length to extend away from blocks.

Competitive Toughness: Is too much of a finesse player in current form. Has flashes of physical play and doesn't play with any fear, but functional strength and power to roll into the POA doesn't always yield great results unless tasked with manning a single gap.

Lateral Movement: Good, strong range. Has worked from the back side of plays and scraped over the top to get involved in plays on the far side of the field. Carries pacing well but needs to improve diagnosis to play forward when working into the boundary and mitigate gains.

Coverage Skills: Has fluid hips and clean feet in order to shift and move effectively away from the LOS. Feel for routes developing behind zones is subpar and doesn't currently reach landmarks in drops to minimize windows over the top of his spot.

Gap Shooting Ability: Is more effective playing laterally as compared to playing down hill due to inconsistency to identify the play and drive forward into a gap. Doesn't gain ground when scraping laterally over the top of boundary running plays.

Feet/COD: Steps are smooth. Prior history as a space defender is useful, capable of collecting and redirecting weight with suddenness and good acceleration in a tight space. Needs to take better angles to avoid sudden adjustments in pursuit.

Flexibility: Shows the needed hinge through the hips to be effective in zone drops, even deeper drops or when tasked with carrying route stems farther up the field. Has nice pad level prior to tackling impact.

First Step Quickness: Has maintained pace and burst well despite transition to a different position. Visible acceleration out of flat footed reads helps to mask some slow reads and inefficiencies with transitions out of read steps into an attack of the ball.

## FILM ASSESSMENT

Games watched: Florida State (2016), Ohio State (2016), Pennsylvania State (2017), Ohio State (2017), Wisconsin (2017)

Football Intelligence: Does not appear to have confidence in reads. Will have eyes in the wrong spot and flow away from keys, opening prominent creases on outside run plays for ball carriers to tuck up inside of. More of a visual pursuit player than one who uses anticipation.

Tackling: Has good pop when able to align the hips and pads in tight spaces. Ability to move feet and adjust to cuts by ball carriers is not consistent. Does not have great length to wrap up and wrangle ball carriers low without risk of sliding off the play.

Block Shedding: Has a poor feel for how to attack linemen after engaging in hand fits. Will look to spin off of contact but does so turning back to the football. Does not have quickness in short spaces to duck underneath of blocks with finesse.

Competitive Toughness: Physically stout player who can deliver heavy contact in tight spaces and can be difficult to uproot from the line of scrimmage when tasked with plugging gaps. Pursuit away from the ball does leave something to be desired.

Lateral Movement: Lacks ideal movement skills to pursue off the weak side, doesn't have mobility to scrape over the top of plays. Will instead try to cut underneath the play but lacks the long speed and short area burst to get home on the ball carrier.

Coverage Skills: Stiff in space. Has a poor feel for routes developing and will get feet stuck in the mud when isolated in space. Labors to turn and get depth out of platform when tasked with reaching landmarks as a zone defender in hook/ curl area in the MOF.

Gap Shooting Ability: Does not have explosive step to get into a crease after seeing alley develop at the LOS. Is guilty of guessing gaps instead of forcing back to make a move and using reactive quickness to mirror and challenge at the line.

Feet/COD: Feet appear heavy and has build up speed. Does not have ability to plant foot in the ground and drive against momentum as a means of defending a cut back from ball carrier.

Flexibility: Very linear. Struggles to unhinge the hips and get any level of lateral mobility without having to get the shoulders aligned. Does not show short area lean to work through contact or finish potential splash plays, Either.

First Step Quickness: Has little burst when needing to accelerate and close ground quickly. Fails to win advantageous angles from either the second level or when walked up onto the line of scrimmage in the pre-snap.

## FILM ASSESSMENT

Games watched: Oklahoma (2017), Oklahoma State (2017), Memphis (2017)

Football Intelligence: Needs to be given simplified tasks in order to make an impact. Is currently not a read and react defender after spending majority of career on the other side of the football. Lacks anticipation and play recognition skills at this juncture.

Tackling: Has good aggressiveness in fills to run feet through the ball carrier. Plays full tilt, allowing for some big collisions with ball carriers but is all hustle and motor. Won't explode through contact and is more of a wrap up tackler than anything else.

Block Shedding: Gets glued to blocks due to poor awareness of hand usage and ability to stack up blockers. Is unaccustomed to pressing out on blockers to establish some free space and therefore often ends reps chest to chest with a blocker.

Competitive Toughness: One hell of a competitor to change positions prior to final season and play MLB after being team's starting QB. Flies around on the field, very likable hustle and mentality. Does not, however, play with functional strength.

Lateral Movement: Has modest straight line speed but lateral mobility should be restricted to within the box. Does not have a lot of pacing when having to scrape and stay square to the line of scrimmage.

Coverage Skills: Stiff in space. Would need to be implemented strictly as a short area zone defender, lacks hinge and fluidity out in space to successfully be a match-up worth assignment in pass coverage.

Gap Shooting Ability: Some of best reps come when afforded a chance to run blitz or green dog plays when left unoccupied. Has good functional balance to play through contact but does need to develop some hand sheds to ensure momentum is not influenced from the side.

Feet/COD: Does not have a lot of twitch or mobility in short spaces. Is built top heavy and does not illustrate a lot of lower body mobility to plant and drive with any notable burst.

Flexibility: Rigid. Upright mover when working down into the box and does not illustrate needed hinge to play with any range or depth away from the line of scrimmage.

First Step Quickness: Possesses more build-up speed than true twitch off of platform. Able to generate momentum between release on the second level and when reaching the LOS in order to press through light contact but won't win reps with pace or burst.

## FILM ASSESSMENT

Games watched: Louisville (2016), Georgia (2017), South Carolina (2017)

Football Intelligence: Slow processor, is not quick to diagnose the play and often times will scrape or fill late and lose angles on ball carrier as an end result. Does not showcase needed anticipation to meet ball carriers in the hole at the LOS.

Tackling: Is not a physical tackler, can be quick to close in space and can find way to the ball carrier if given a free pass through traffic but is not going to deliver a big hit or jolt ball carriers. More of a wrap and dead leg tackler than powerful hitter.

Block Shedding: Gets glued to blocks far too easily and is limited in skills and functional strength press and disengage from blocks. Swallowed up at the POA when trying to stick nose into an inside gap and rarely comes out the other side in pursuit.

Competitive Toughness: Does not showcase desirable functional strength, nor the ability to tolerate contact at the POA. Is frequently eliminated with even slight lateral contact from plays and needs to use hands with greater consistency to avoid blocks.

Lateral Movement: Does not have the needed burst or explosion in open field to cover up lapses in judgement and ability to read the play. Lacks true sideline to sideline range and flow.

Coverage Skills: Has a fair level of short area agility and movement skills, but gets tunnel vision when isolated out in space and does not shade his zone stems appropriately to take away throwing windows.

Gap Shooting Ability: Lack of anticipation removes any consistency with playing forward into the LOS and limited opportunities to make splash plays on the plus side of the line of scrimmage.

Feet/COD: Has a sharp cut out of flat footed reads to break and transition into pursuit of the football. Does show the ability to collect momentum with some quickness and cut underneath of a looming block when scraping over the top of a play.

Flexibility: Hinge, turn and run skills are present to be a viable pursuit defender. Does not play with needed leverage at the LOS when taking on blocks head on. Needs to show more hip drop and ability to sink pad level.

First Step Quickness: Light on first step when able to get down hill with quickness and attack the LOS immediately. Has the physical skillset to be more effective as a quick footed defender than able to showcase.

## FILM ASSESSMENT

Games watched: Texas Christian (2016), Miami FL (2016), Oklahoma State (2017), Oklahoma (2017), Utah (2017)

Football Intelligence: Is most effective playing forward, appears hesitant and less apt to break on a play when forced to sit on the island and read action in peripheral vision. Has linear thinking and linear skill to blow forward and plug gaps.

Tackling: Will get banged and knocked around, losing balance on high traffic tackle reps. Has good pop in the pads when playing forward and when the hips and pads have opportunity to align. Has needed physicality to stand up ball carriers one on one.

Block Shedding: Does not have a desired amount of length and furthermore complicates the issue by not using hands to stun blockers. Instead is content to hammer into bodies with pads, which is effective as a gap plug but won't cut it when tasked with disengaging and getting back into pursuit.

Competitive Toughness: Is a hammer stepping downhill in between the tackles, especially if not forced to diagnose at the snap. Otherwise loses confidence and is robbed of pretty solid functional power. Struggles to press and get off of blocks.

Lateral Movement: Must get hips open to transition into scrape. Lack of foot quickness prevents a quick shoot across the face of blocks in tight spaces. Lateral range is only modest and won't be able to fulfil the MIKE at the next level.

Coverage Skills: Doesn't offer a whole lot of value away from the line of scrimmage. Doesn't have the hip mobility to flip up the field and turn and run with receivers in man to man assignments. Doesn't have a lot of anticipation or feel for routes developing on the second level to flow in zone.

Gap Shooting Ability: Is best as a run blitzer. Will hold water just long enough to step forward and get gap to develop to shoot through as a between the tackles run defender.

Feet/COD: Feet are deliberate and not necessarily dynamic as it relates to being able to plant outside of the hips. Has a linear level of pursuit and needs to have clear pathways if able to scrape over the top of the play and get outside the numbers.

Flexibility: Has some notable tightness when trying to get away from the line of scrimmage. Balance is compromised more than anything, will lose footing and get rerouted easily with heavy handed defenders due to inability to extend feet and catch weight.

First Step Quickness: Capable of taking some protection schemes by surprise as a delay blitzer with a solid first step to explode forward out of read steps.

Man Cover Skills: Has terrific foot speed and transitions to flip hips up field and carry vertical route stems. Is comfortable playing with back to the football before locating late. Combative at the top of route stems but can get handsy at times against bigger receivers.

Zone Cover Skills: Spatial awareness and peripheral vision to divide spaces on the field and get in a position to break on a throw is terrific. Lack of length can diminish ability to influence throwing windows but foot quickness and route combo recognition skills are great.

Feet/COD: Natural foot quickness is excellent. Has ability to stay overtop of routes in up man coverage with backpedal, very smooth to drop off the LOS. Transition steps are crisp and efficient, is not wasteful when having to collect and drive on a route.

Ball Skills: Has been well coached to play the hands of the receiver. Has trust in ability to react to receiver's eyes and get hands vertical between hands of receivers to contest. Aggressive and accurate swipe when not in position to immediately break receiver's hands.

Flexibility: Hips are free and fluid. Has no issue in zone coverage to bail with speed and flip hips to get into pursuit of the ball. Has highly mobile body in general to contort and get small to slip contact or to reach and extend for the football.

Acceleration: Ability to get up to top speed with quickness allows for late recovery or burst to challenge ball coming out of primary zone. Has an effective click and close to drive across the face of receivers and undercut the throw in off coverage or when leveraged over stem.

Zone Spacing: Disciplined in space to hold water and wait for QB to declare a throw before breaking on the ball. Has found ball production from sinking out of primary area and overlapping to aggressively address the football. Effective in the flats but best value is as a deep third defender.

Competitive Toughness: Has eyes bigger than pads. Wants to step up and be engaged in everything. When driving on the catch point will jar receivers loose from the ball. As a head up tackler and challenging blockers, is limited by pedestrian lower body power and ability to absorb contact.

Run Support: Does well to get out of bail technique and step back up to beat blockers across face and use the boundary to leverage runs appropriately. Good attitude as a tackler. Does not illustrate ideal length or pop in hands to take on blockers and quickly discard.

Tackling: Boom hitter in zone coverage when driving on targets in front of face. Loses luster when buzzing down into the LOS to play the run, but is disciplined to play more conservative and allow teammates and pursuit to catch back up to the play.

## FILM ASSESSMENT

## Games watched: UCLA (2017), Southern California (2017), Utah (2017), Washington State (2017), Texas State (2017)

Man Cover Skills: Has great length and is quick to find positioning in phase with receivers down the field. Physical on route stems to stay sticky and keep a tight window. Does well to pin receivers into the sideline on vertical throws. Shows anticipation of route breaks.

Zone Cover Skills: Can get a bit nosey in some instances, will take the cheese on backfield action and get out of position vertically. True deep third reps in C-3 are strong to drop with control and smooth transitions. Has great feet for backpedal.

Feet/COD: Smooth. Has terrific control in backpedal to stay balanced and leveraged over the top of route stems and in a position to challenge the ball. Transition steps are clean and will show spring driving out of a backpedal and pushing forward to challenge the route.

Ball Skills: Does very well after locating the football to stay in position and win favorable space to contest. Has great length and needed mobility to extend for the ball.
Awareness of the receiver's hands and effort to dislodge is very good.

Flexibility: Hips are clean and free, has no effort swinging back across momentum to pivot and carry routes down the field. Has good upper body mobility as well, allowing for a large catch radius and influence of the ball.

Acceleration: Burst up the field is quality but not top notch. Has enough recovery speed to reconcile a false step. Can get pressured vertically by more speedy receivers. Noticeable acceleration when springing forward, has good plant and drive ability.

Zone Spacing: Ability to split the difference on multiple route stems is strong. Needs to make sure routes do not slip behind him out of peripheral vision, however. Utilization is largely down the field, not tasked with playing up in the flats.

Competitive Toughness: Physicality on the stem is impressive, not easily bumped out of position at the catch point. Effort is strong, even as a contain defender as a tackler. Plays through the end of the whistle on pass targets and 50/50 balls, attempting to break up late.

Run Support: Conservative as a tackler in the run game, will try to stay over top of the ball and allow pursuit to close in. Shows good length and ability to shuck blockers with hands, will discard quickly and step up with intent to close down angles.

Tackling: Is not especially physical, more of a roll tackler than a head up hitter. Shows presence of mind to attack the football in the pile in an effort to generate turnovers.
Wingspan is useful in wrapping up ball carriers as they turn up field and try to run by.

| -7.17: HOURTHROUNE | UNDERACHIEVER | U | UNDRAFTED FA |  | $<5.99$ |

Acceleration: Has good short area burst. Quick to explode off of foot in the ground and spring forward, capable of undercutting out patterns and challenging the football instead of the man. Has good burst in the open field but short area explosiveness is more effective than long speed.

Zone Spacing: Has had success with playing off and giving passers false reads in the secondary before reading the route and sticking foot in the ground to react. Has had success in hook/curl and flat areas to bounce off of platform.

Competitive Toughness: Wants to play bigger than size will allow. Has had some issues as a tackler and can get worked over by powerful receivers at the catch point. Lack of wingspan and size create difficulty trying to work around the body of receivers.

Run Support: Quick to put foot in the ground and drive forward into the LOS but tackling habits are a bit out of control, which forces some missed tackle chances. Needs to be more disciplined attacking blocks on the boundary as well.

Tackling: Can be too late to gear down and come to balance when trying to square up ball carriers. Will overrun the tackle opportunity and give up chunk gains outside. Will slide off of attempts when redirecting late and does not have functional strength to mask inconsistency.

Man Cover Skills: Does not have great length or physicality to dictate route releases at the line of scrimmage. Does have good hip flip and transition ability to play off man and work into the hip of receivers with suddenness.

Zone Cover Skills: Has the needed vision of the field and short area quickness to effectively drive out of a shallow zone and into path of the football. Does not have a great wingspan, nor length to protect vertically as a last line of defense player.

Feet/COD: Very smooth with feet. Effective at the line of scrimmage, with hips flipped up the field to carry vertically or when tasked with taking bucket step to drive forward and into the LOS to attack a run or shallow throw. Nimble feet allow for sudden COD.

Ball Skills: Lack of length can show up when tested over the top in zone coverage, has missed out on a number of contested throws due to lack of influence. But high point ability is strong none the less and hands are soft, helping to convert potential chances into turnovers.

Flexibility: Very bendy and pliable frame, making plays with length he doesn't appear to have. Will make the most out of wingspan. Has loose, fluid hips to turn and run with receivers up the field.

| - 7.17: FOURTH ROUND VALUE - |  |  |  |  | UNDERACHEVER | U | PRIORITY UDFA |  | 6.00-6.24 $<\mathbf{5 . 9 9}$ |

Man Cover Skills: Shows some very strong quality reps to play as a press defender. Lacks wingspan but length and willingness to wait out a receiver at the LOS results in successful re-route of the pattern. Will have growing pains if tasked with a lot of off man.

Zone Cover Skills: Is effective off of platforms and keying route stems. Does not have rapid click and close and will not beat receivers to the football if squatting on the route but should have no issues with arriving on time and able to jar loose the ball.

Feet/COD: Has some lag when trying to slide and mirror at the line of scrimmage, instead is prone to leaning and chasing the press. Does not show great ability to hinge and flip the hips up the field to get into the hip on vertical routes.

Ball Skills: Still new to playing the boundary, was a LB convert. Has to be more aware of chances to cut off the ball, instead likes to play the body and will break up the pass as a secondary action. Takes good angles to break into a target, however.

Flexibility: Does not have great hip hinge and lacks suddenness when getting lateral and realigning the hips out into the boundary. Explodes into hits with good coil of the body to generate notable power as a tackler.

| - Tackles/ Start: | $N / A$ | - Interceptions/ Start: | $N / A$ | - Passes Broken Up/ Start: | $N / A$ |

41
$N / A$

Start.

Acceleration: Does not have great burst and is lacking in makeup speed if tested vertically. Plays most effective when up in the face of receivers and able to bully at the LOS, but gets into trouble if he fails to get hands on firmly and has to chase.

Zone Spacing: Does not have a great deal of burst or explosion out of transitions and would not be a desirable fit to cover large areas of turf all by his lonesome. Deep third spacings would be fine, has needed athletic ability to fulfil that role adequately.

Competitive Toughness: Impressive play strength. Has desirable hitting power to be an enforcer in coverage, worth consideration at Safety in addition to reps at CB. Utilized on kick coverages and able to contribute on more than just base packages.

Run Support: Assertive run defender, willing to charge the box and put the pads into a ball carrier peeking out of the pile. Aggressive charges are paired with good angles, works to get overtop of the run first before looking to square up a hit.

Tackling: Terrific tackling efforts in one on one reps.
Patient, willing to let ball carrier declare before reacting and showing good wrap up grip strength and foot mobility to stay framed on tackles.

Man Cover Skills: Shows very good patience at the line of scrimmage to punch and disrupt route releases. Stickiness against bigger receivers can be compromised due to lack of length, size and play strength. Needs to be more effective with hand to feel route breaks coming.

Zone Cover Skills: Has discipline dropping off of the LOS and peeking back to the passer, getting into throwing windows effectively to stop and undercut a pass in his vicinity. Good short area quickness and agility to react to a throw in front of face.

Feet/COD: Shows good footwork at the LOS. Is not quick to bail out and will stay patient before stabbing to jam. Has fluid feet and little issue with stopping on a dime, even if ability to restart does not possess the same level of spring in stem.

Ball Skills: Former receiver, illustrates excellent hands to convert opportunities into turnovers. Has a feel for extending to greet the football. Awareness to attack in pile situations as a tackler as well.

Flexibility: Has a pretty loose set of hips, able to hinge and work eyes back to the ball while still carrying speed vertically when tested. Has needed hip hinge to pivot and turn to run with defenders. Shows great pliability in the lower half to plant and catch momentum with quickness.

## FILM ASSESSMENT

Games watched: Wisconsin (2016), Southern California (2017), Michigan State (2017), Buffalo (2017)

Acceleration: Does not have anything more than average burst or long speed. Shows some nice short area quickness courtesy of compact steps and low frame but long speed is an issue when tasked with protecting against vertical throws.

Zone Spacing: Has a fair level of leaping ability and short area click and close to react to the ball and takes great angles out of a break to charge the throw and get in front of the body of receiver.

Competitive Toughness: Contributor in the return game in addition to productive secondary play. Scrappy in all the right ways, can play pesky at the catch point. Will get bodied off of landmark in contested situations and can have trouble recovering.

Run Support: Is not great at fighting off of contact, limited by a lack of length. Effort and charge up the field is strong and will get around some blocks quickly just by using open field athleticism and recognition.

Tackling: Does not offer a notable amount of hitting power. Can be tentative stepping up to challenge backs on the boundary and isn't especially keen on trying to throw the body into contact as a way to chop down ball carriers swiftly.

several clutch plays on the football by reacting late and still getting hands on the ball. Lack of wingspan shows up in contested situations but as an off cover defender does well to drive through the body of receivers and jar the ball.

Flexibility: Tight hips when trying to transition and carry hips up the field while trying to work into position in phase. Struggles with feet to spin or pivot with a notable range of motion, causing turns and pivot steps to be rounded and delayed. backfield to read play developing in front of face. Has good reaction skills and anticipation to break on the football when keying passer.

Feet/COD: Backpedal appears a bit labored in up coverage and as a result can be forced to commit early in reps. Has some delayed and soft transitions due to foot quickness, needs to stay physical in early portions of routes to avoid conceding on breaks.

Ball Skills: Terrific hand-eye coordination. Has made

Man Cover Skills: Can be a bit soft at the top of route stems, failing to stay leveraged and hold ground on sharp breaking routes. Has only modest length to challenge from the trail position. Very physical in press situations at the LOS.

Zone Cover Skills: Has good patience on platform in zone coverage, will collision routes and work eyes back into the

## PSAR METRIC

NFL Combine

- Measured Height:
- Measured Weight: 6002 - Measured Hand Diameter: $9.38^{\prime \prime}$ - Measured Arm Length: $32.75^{\prime \prime}$ - 40 Yard Dash: 4.63 CB Combine Avg. (03-16): - 10 Yard Split: 4.49 B Combine Avg. (03-16): - Bench Press ( 225 lbs ): CB Combine Avg. (03-16): - Vertical Jump:

CB Combine Avg. (03-16): - Standing Broad Jump: CB Combine Avg. (03-16): - Three Cone Shuttle: N/A CB Combine Avg. (03-16): N/A

- Short Shuttle: CB Combine Avg. (03-16)

Man Cover Skills: Effective habits at the line of scrimmage to disrupt route releases. Has a bit of a lag in off coverage at the top of route stems and can play in breaking patterns a bit soft. Effective turn and run coverage from in phase positioning.

Zone Cover Skills: Terrific instincts in Cover 3. Plays bail technique with the best of them, able to hinge and flip the hips up the field and stay leveraged overtop and sustain integrity. Reactionary quickness in these reps is effective and useful in contesting a lot of throws.

Feet/COD: Feet are efficient with transition steps, able to get vertical and flip the hips without much of a delay. Has good but not great short area quickness if looking to work across the face of a receiver or accelerate to the football while carrying a route across the MOF.

Ball Skills: Highly productive ball defender throughout one year as a starting CB. Has a great nose for locating the football and consistently puts length and wingspan to good use to extend and contest a throw. Has very active free hand to strip and tear at ball at the catch point.

Flexibility: Loose through the shoulders to optimize influence and ability to extend and greet the football. Has needed hip hinge to step over foot when transitioning up the field and flip to play with speed. Coils into contact effectively to play with some pop.

## FILM ASSESSMENT

Games watched: Arkansas (2017), Auburn (2017), Clemson (2017), Georgia (2017)

Acceleration: Does not have great long speed. Ineffective with straight line reps to hold leverage, must be provided with insurance overtop in order to protect from vertical throws. Good quickness to step forward and get into the line of scrimmage.

Zone Spacing: Wingspan is notable, allowing for a large area of influence if squatting in the shallows. Would like to see a little more aggressive spacing in the shallow areas, can give up some easy receptions short.

Competitive Toughness: Plays with bigger eyes than muscles. Impressive tenacity to step up and either jam bigger receivers at the LOS or to set a firm edge against the run. Will get worked over by bigger players but does not let size act as deterrent from technique and responsibility.

Run Support: Has a great attitude about stepping up into the LOS. Has a good amount of length to stack blocks and can be effective to extend and lock out of receivers. Holds ground firm despite being light in the trunk.

Tackling: Will throw full frame into tackle attempts. Has gotten beaten down by some bigger backs out of the backfield. Good habit at the catch point to extend for the ball but ensure that up field arm is hooked to prevent a missed tackle after the catch.

ingles to get back off of the LOS and be able to keep feet in motion without untying from the ground and struggling with reactive quickness within the 5 yard contact window.

Zone Cover Skills: Eyes are disciplined in the flats, shows good scrap and ability to drop off of route stems when carrying a receiver and passing off to a teammate vertically. Shows desirable skills to supplement short area reps as a Cover 2 defender.

Feet/COD: Feet are lacking in high end short area quickness, will struggle in rapid fire reps to collect and redirect downhill. Technique and footwork when having to play turn and run coverage often features lethargic transitions due to poor foot speed.

Ball Skills: Had only a select looks at contesting throws but will often times struggle to stay in the hip and provide a chance to contest a throw. Has sub-optimal length to help mask when tracking the ball and extend to reach at apex at the catch point.

Flexibility: Has only modest mobility throughout the hips and fails to showcase desirable skills to step over break side foot to rotate hips with suddenness and accelerate up the field and into the trail position.

## FILM ASSESSMENT

Games watched: Notre Dame (2017), Clemson (2017), Virginia Tech (2017)
Acceleration: Does not have great long speed, can be tested vertically by technicians who create a false step when conceding space. Will struggle to recover if tested on a deep throw and has not shown the ability to effectively play on an island.

Zone Spacing: Field vision when dropping off of the LOS and pivoting to challenge a secondary route is strong, good timing to uncover and make a break on potential targets to stay combative in coverage.

Competitive Toughness: Physically stout player thanks to a thick build and effective habits when looking to square up hits as a tackler. Shows good ability to leverage a route if boxed into a tighter window and not stressed laterally at the release.

Run Support: Does well to drop off of zone in Cover 2 and step up into the flats. Effective charge and good reactive quickness to step up without delay and ensure that ball carriers to not reach the boundary and are able to turn the corner.

Tackling: Has provided effective support, both on the boundary and as a rally defender in the field. Has patience when squaring up tackles and is not going to leave feet prematurely or lunge without showing awareness to wrap up ball carrier.

## FILM ASSESSMENT

Games watched: Wisconsin (2016), Pennsylvania State (2017), Western Kentucky (2017)

Man Cover Skills: Plays transitions a bit too loose, would like to see more deliberate intent to squeeze route stems early and stay attached at the hip sooner. Will struggle to stay locked onto a receiver down the field once soft initially in coverage.

Zone Cover Skills: Has some physical play at the line of scrimmage, which would be useful if playing Cover 2 flats. Has ability to squat overtop of route combinations and sift through the trash to find the ball and challenge.

Feet/COD: Does not have high end lateral quickness and can get worked at the line by more shifty receivers looking to break out of a press attempt. Does spring off flat footed platforms well but struggles to gear down and collect momentum if carrying weight up the field.

Ball Skills: Illustrates good hand/eye coordination to put hand on the ball when afforded an opportunity to contest. Struggles to stay in the hip pocket will limit opportunities to contest the throw.

Flexibility: Shows some tightness and restrictions in the hips, preventing a clean hinge from overhead to take an aggressive angle and work into place to pursue and challenge the ball.

Acceleration: Lacking in desired long speed and struggles to stay glued down the field. Has very limited range in the longer portions of the field, cannot be relied upon to play turn and run without Safety help in all instances.

Zone Spacing: Modest short area movement skills but does offer some click and close ability. Will not do well if tasked with playing long coverage down the field and will not be able to prevent receivers from stacking his deep zones without conceding massive space underneath.

Competitive Toughness: Has a well built, sturdy frame and the needed physicality with hands to successfully re-route releases off the line. Hustle is strong to work into the play when the ball breaks away.

Run Support: Has desirable length to challenge ball carriers and reps featured as a flat defender would serve well in placing him near the LOS and allow him to utilize length as a means of setting the perimeter.

Tackling: Needs to show more activity in the lower half in an effort to corral ball carriers, will dead leg tackle attempts and allow for some additional real estate to be surrendered when trying to wrestle down the ball.

|  |  |  |  |  | Ілорексенетия | U |  |  | < 5.99 |

Man Cover Skills: Does not have great long speed or burst to stay with receivers when tasked with carrying a vertical route stem. Can be jumpy and overaggressive in press reps and miss the jam.

Zone Cover Skills: Effective Cover 3 defender, plays with bail technique and offers a strong level of route recognition skills to understand the route coming. Can get flooded and overwhelmed if having to handle multiple stems or crossing routes in front of face.

Feet/COD: Footwork is clean. Shows a good ability to come to balance in reaction to route breaks and has some effective COD to mirror less athletic receivers on the boundary and have success. Lack of burst is a notable issue, however.

Ball Skills: Ability to read the ball in the air in strong. Had notable ball production as a first year starter in 2017 and several other close calls that were out of bounds or negated. Has proactive extension to challenge the ball.

Flexibility: Has some visible tightness present through the hips, particularly in bail technique. Struggles to get the hips opened up the field and still keep the eyes present and locked into the backfield, will lose some pacing as a result.

Acceleration: Lacking in explosive qualities to supplement strong footwork. Will not explode out of a bucket step and if targeted in zone on come back patterns does not have the spring to work back into the place from an leveraged position.

Zone Spacing: Lacks the burst to make the most of opportunities to drive on the ball. Needs to be closely contested to the route in order to get hands on and influence throws.

Competitive Toughness: Would like to see less interest in undercutting traffic and trying to find a cheap outlet to the football. Has good habits at the catch point to address the body of the receiver first.

Run Support: Ability to sift through contact and find uncovered challenges are irregular. Flashes are present but would like to see better hand usage and quicker fill from the
secondary to harden the edge for opposing ball carriers.

Tackling: Has had flashes of strong form tackling on the boundary, particularly in pass defense. Ability to tackle running backs on the edge is present but needs to be more consistent to work the pads in front of looming collisions and not look to deliver body blows.

Cornerback (+0.10)

Games watched: Virginia Tech (2017), Oklahoma State (2017), Oklahoma (2017)

## FILM ASSESSMENT

Games watched: Auburn (2016), Washington (2016), Clemson (2016), Florida State (2017), Mississippi State (2017), Arkansas (2017), Texas A\&M (2017)

Coverage Spacing: Does very well to stay aware of route combinations in vicinity to split difference and leverage adequately to contest any target. Will plant and drive with confidence once throwing motion of QB is initiated to cover ground.

Acceleration: Straight line speed is surprising. Will catch defenders from behind trying to chase in the open field. Can win even at disadvantageous angles. Recovery speed is strong. Side to side range is above average when tasked with playing center field.

Tackling: Physical player with abnormally built frame for position. Will overwhelm smaller ball carriers at the line of scrimmage or receivers at the catch point. Confident stepping up and filling the D-gap and tackling. Can be a touch late to break down in the open field on occasion.

Zone Coverage IQ: Disciplined both at the LOS and as a deep defender. Has good grasp of route combinations and shows good anticipation to shade towards developing route breaks and collision as needed on either targets or knocking receivers off pathway.

Ball Skills: Ability to pick up the football in air is top notch. Quick reaction and hand eye coordination allows hands to get on balls and prevent from getting eaten up. Soft hands and good ability to finish turnover opportunities. Violent hand swipe to break triangle of receiver's hands.

Competitive Toughness: Mean, nasty demeanor. Can fill the role of a tone setter buzzing down into the LOS. Has had some violent collisions when able to build up a head of steam and get into the body of offensive players. Hustles. Fought to play through hamstring tweak vs. LSU (2017).

Flexibility: Lower body mobility is high quality, enabling speed to carry through deep route coverage and not surrender leverage vs. the route. Ability to get low to coil for tackles is present. Can contort body to extreme angles trying to bat at the ball.

Feet/COD: Pure foot quickness is strong for size and length. Has an explosive drive out of bucket step and ability to spring with quickness. Lateral ability is more predicated on length and width of stride but still effective in mirroring in space.

Man Cover Skills: Fully capable of walking up on the line of scrimmage and disrupting release before flipping hips into trail position. Has adequate foot quickness to transition and stay sticky at the top of route stems and challenge down the field.

Versatility: Defensive chess piece capable of being moved around the entire field. Effective pressure player from the slot. Capable of locking up in man to man against most comers. Vertical zone coverage and comfort in a robber role are all plus qualities.

## FILM ASSESSMENT

Games watched: Mississippi (2016), Alabama (2017), North Carolina State (2017), Miami (2017), Syracuse (2017), Clemson (2017), Florida (2017)

N/A
$40.00^{\prime \prime}$
35.63 '

11'00" N/A ,

Ball Skills: Underrated aspect of game. Soft hands, long wingspan and a good read on locating football early and contesting with length. Is aggressive in challenges to reduce angles of opponents trying to finish contested catches. Length diminishes size of throwing windows into zone. structure of teammates around him. Explosive hit power.

Zone Coverage IQ: Can get a bit greedy in some instances looking to shade towards early developing route, especially when tasked with playing on the back end. Encouragement to stay patient and trust eyes/length is needed to reach high ceiling in this role.

Coverage Spacing: Highly effective in the middle of the field in "robber" role thanks to length and quickness. Does well to stay leveraged over vertical stems when route concepts attempt to isolate and create drift. Movement skills allow for quick reaction and challenge.

Acceleration: Range and acceleration skills are visible both in linear and lateral instances. Has good side to side mobility thanks to dynamic first step and loose hips to transition quickly and get into a sprint. Will cover large ground and catch would be blockers off guard to win spot.

Tackling: Can be a bit overeager to step forward and deliver a big blow. As a result can be slipped in the open field if tasked with playing last line of defense. Habits on the second level are strong to come to balance within

Competitive Toughness: Plays with a big presence and intent to deliver big contact to skill players. Does well to play through contact and illustrates desirable usage of hands to keep body clean or transition out of contact and into pursuit mode.

Flexibility: Highly pliable frame in all occurrences, be it a boundary blitz to flatten and find target as a tackler or adjusting wingspan to attack the football in the air. Has loose hips and ample ability to hinge and get depth when pressed vertically with route stems.

Feet/COD: Change of direction skills are sudden and visible in comparison to teammates. Especially special considering the size and stature of frame. Short area agility is there to slip blocks in run support or plant and drive to attack a quick throw in front of face.

Man Cover Skills: Will find success when assignment is a bigger player. More fleet footed receivers and polished route runners will be able to create false steps when route is challenged at the line of scrimmage. Can play off man and click/close with needed burst.

Versatility: Tremendous presence both in the secondary and as a nickel defender walked up to the line of scrimmage. Has skill as a rusher off the edge. Value is highest as a Strong Safety, where influence in the run game can be present and opportunity is still there to play deep half in C2.

## FILM ASSESSMENT

Games watched: Southern California (2017), Notre Dame (2017), Texas Christian (2017), San Diego State (2017), Utah (2017)

Coverage Spacing: Has very good discipline to stay true to assigned landmarks, has good anticipation and peripheral vision to peel off of an initial carry and work back into position to drive on the throw if a following receiver is pushing into zone.

Acceleration: Has desirable burst and acceleration skills. Long speed is not a primary trait but has very nice initial burst and takes good angles to find favorable positioning to help mask. Would not recommend a frequent single high role, however.

Tackling: Terrific tackler. Strong habits to step up into the LOS and square up ball carriers in the hole. Takes a hard charge and puts pads behind hits when challenging receivers at the catch point. Has wrap up ability and big hit skills to jar loose the football.

Zone Coverage IQ: Route anticipation and vision in the field is effective in setting up baited throws. Really came into own as a Senior to find ball production and was a reliable piece of the back end.

Ball Skills: Added to resume with 5 INTs in 2017. Is more prone to play the body of a receiver instead of the actual ball when attacking throws in zone coverage. Would like to see more aggressive angles at times to try to contest the ball prior to arrival.

Competitive Toughness: Has a big time ability to blow up an opponent. Flies up at a million miles an hour as a run blitzer or when shooting into the catch point from a flat footed read. Very physical, effective both at the LOS and as a tackler.

Flexibility: Has ability to optimize frame and length as a tackler and has a very high tackle radius. Shows good weight distribution and control of momentum with dynamic lower body and low hips.

Feet/COD: Feet are effective in press coverage reps from the slot to turn and carry routes up the field, showing good transitions to turn and run smoothly. Has a hard plant and drive to spring out of flat footed read and get into favorable position to contest a throw.

Man Cover Skills: Offers physical play at the line of scrimmage and clean footwork to turn and run and carry a receiver up the field. Shows good habit to pin hand to hip and press the receiver into space. Long speed can be problematic if pressure reps don't get home.

Versatility: Can fill any role in the secondary aside of boundary CB with some level of success. Has three down abilities and should be a scheme diverse defender with universal appeal, regardless of base defense. Can play through traffic or in one on ones.

## FILM ASSESSMENT

Games watched: Southern California (2017), Oklahoma (2017), Oklahoma State (2017), Kansas State (2017), Maryland (2017)

Coverage Spacing: Can get caught in between zones against running threats, will get held by the mesh point. Length is effective to influence plays even if not immediately on the body of receivers. Is most disciplined on vertical responsibilities.

Acceleration: Has good linear burst to react to throws and get into position to clean up an errant throw. Has good long speed for stature but shouldn't be regarded overall as a burner by any means. Illustrates a fair amount of range on the back end.

Tackling: Is a boom hitter with a heavy set of pads. Would like to see some more dedication to wrapping up to finish plays, has bounced off of some potential tackles. Overall plays with confidence to go toe to toe with any comers and is an asset as a tackler.

Zone Coverage IQ: Currently has greater polish away from the line of scrimmage. Will do well to stay vertical and protect from deep plays down the field. Has a good awareness of targets coming into vicinity in zone.

Ball Skills: Terrific ability to finish potential turnover plays. Has soft hands and strong fingers to squeeze the ball, even at the end of wingspan to create big plays. Has a notably large catch radius as well, which can come in handy on overthrows in the intermediate.

Competitive Toughness: Enforcer type in the middle of the field, looks to drop a shoulder on ball carriers when buzzing down into the pile. Effort level to stay in pursuit is strong. Has a great level of physicality to play off blocks and stand strong on tackles when wrapping up.

Flexibility: Struggles with late redirection when scraping laterally to flow with ball carriers, will get cut back inside. Ability to adjust late to deflected throws and attempt to make catches is excellent. Can be a touch stiff trying to flip and carry vertical routes up the field.

Feet/COD: Does well on deep zone work to react quickly and stay overtop of the target. When buzzing down into the box with get overaggressive at times and will not be able to pivot and stay balanced on ball carriers. Does a great job with feet to run through contact.

Man Cover Skills: Has the movement skills and length to play turn and run coverage with tight ends or bigger receivers in the slot. Has not spent a lot of time playing turn and run coverage, so expectation is there will be development needed there.

Versatility: Three down player with value in the box as a run defender and ability to play deep zone coverage.
Athletic ability can add man to man skills as well. Effective buzzing in off the edge as a blitzer too, can flatten down as a free rusher.

## PRODUCTION SUMMARY

324 total tackles, 10 interceptions (INT), 17 passes broken up (PBU)

## Kyle Crabbs 2018 NFL Draft Report <br> Armani Watts, Safety \#23

## FILM ASSESSMENT

Games watched: UCLA (2017), Alabama (2017), Auburn (2017), Louisiana State (2017)

Coverage Spacing: Effective in deep portions of the field, showing good discipline to play over the top as a deep zone defender. Acceleration skills flash in tight spaces to cut into the pathway of the football as an underneath zone defender.

Acceleration: Very quick and sudden in all instances. Regardless of being tasked to hinge open and get sudden depth on deep targets or collecting to drive forward at targets in front of face, has great burst and secondary acceleration, very good range all around.

Tackling: Has to continue to focus cleaning up tackling habits prior to first contact. Is guilty of leaving feet at times and other times will take poor angles to the football all together. When balanced is a terrific wrap tackler and a strong presence at the LOS.

Zone Coverage IQ: Has had greatest success as a deep defender in zone, where range and acceleration skills can be illustrated. Takes good angles as an overtop defender to meet the football at the receiver.

Ball Skills: Has a great nose for the football, as evidenced by ball production as a defender. Quick reaction skills and has been able to flash hands late to react to a ball getting into area unexpectedly. Aggressive angles pay dividends to undercut the football.

Competitive Toughness: Capable of some terrific hits stepping up into the flats as a D-gap defender, very likable aggressiveness and ability to boom ball carriers. Can get outworked by bigger receivers when trying to challenge at the catch point.

Flexibility: Makes the most of full range of motion. Little issue with diving or extending to make most of length and challenge the football. Plays with leverage consistently as a tackler and has no problem dropping the pad level down to deliver a hit.

Feet/COD: Very fluid. Does well to redirect and challenge the football in tight spaces to burst to a favorable angle of the football as needed. Ability to buzz out of the box with a clean backpedal allows for effective disguises of coverage in the pre-snap.

Man Cover Skills: Size is going to be primary concern for reps in man to man. Lacks length, size and overall physicality when not playing forward into the line of scrimmage. Has feet and movement skills to be effective but is still a bit handcuffed, would need to cover small WRs.

Versatility: Has ability to positively impact the pass game as a deep middle defender and as a run defender charging from the flats. Poor tackling habits can be a bit risky to leave as a last line of defense, however.

## FILM ASSESSMENT

## Games watched: Arkansas (2016), Washington (2016), Louisiana State (2017), Auburn (2017), Clemson (2017), Georgia (2017)

Coverage Spacing: Does a terrific job getting onto the hash or numbers and hitting landmark before pressing hard for depth in deep coverages. Capable of closing to the football with enough suddenness to challenge throws in holes against zone.

Acceleration: When able to open strides and gain a lot of ground will accelerate with suddenness after initial transition. Has modest range and enough smoothness and short area quickness to flow and get out of a backpedal with rapid reaction.

Tackling: Nasty hitter as a downhill plug player. Will jolt the ball carrier with hips and pads aligned into target. Slips and slides off of tackles when trying to wrap up with just upper body or attacking the ball laterally late. Needs more upper body strength to finish reps.

Zone Coverage IQ: Highly polished as a back end player. Hits needed landmarks consistently. Has patience to hold water and let routes develop first before then driving on flat footed targets.

Ball Skills: Most prominent skill is length. Is very long and effective to reach and high point the football to make a play aggressively. Good reaction time and has effective address of the football with hands to cleanly pull in potential turnovers.

Competitive Toughness: Loses some of the pop in hitting power when unable to attack tackles straight on. Has good combativeness at the catch point and when working receivers down the field on their route stems. Gives honest effort to flow into pursuit.

Flexibility: Has a likable amount of mobility through the hips to hinge and carry zone drops with quickness, although pad level does get caught high on such plays. Has surprising confidence in feet away from hips, allowing for some sudden redirections.

Feet/COD: Foot quickness is not an exceptional strength, backpedal and cleanliness buzzing off of the line in man to man coverage are strong. Has good cadence in backpedal and zone drops to stay leveraged and balanced when working on the fly.

Man Cover Skills: Can be a bit grabby and overly physical with eyes flipped back to the ball. Needs to relax and become more subtle with hand check and tug on the numbers. Has needed hip mobility to hinge and gain depth at the snap.

Versatility: Has length to play the trail position and is physically capable of playing turn and run coverage on TEs up the seam. Sudden second level blitz player, shows good ability to carry speed off the edge as a nickel blitzer. 2 Deep or Robber role ideal in coverage.

## FILM ASSESSMENT

Games watched: Oregon (2016), Miami FL (2016), Boise State (2017), Indiana (2017), Louisville (2017)

Coverage Spacing: Is more effective as responsibility works closer to the line of scrimmage. Deep skills are hindered by lack of high end athletic ability. Can be a terrific option in the intermediate areas to split route stems and mirror the eyes of passer.

Acceleration: Underwhelming range when tasked with playing side to side. Does have build up speed and once able to open strides has enough burst to stay in the hip pocket of ball carriers, particularly when runs bounce to the boundary. Can get tested vertically in deep coverage.

Tackling: Terrific open field tackler. Effective buzzing down into the LOS and is self aware of when opportunities are present to shoot gaps and when conservative stalk of ball carrier is needed instead. Highly productive run defender with good pop in pads.

Zone Coverage IQ: Has consistently leveraged against route combinations to allow for plays on the ball. Opportunistic and disciplined player in space, not often suckered into false steps or reckless splits between routes. Will break with anticipation on throws.

Ball Skills: Hand-eye coordination is strong to see ball into hands. Does not have great dynamic athleticism when needed to address the ball but discipline and positioning often leads to opportunities to make a splash play as an opportunistic defender.

Competitive Toughness: Has a big presence at or near the line of scrimmage. Has enough physicality to step up and challenge blockers, knows how to displace area and slip past a block with hand usage and length. Team leader and shows great effort.

Flexibility: Notably tight in the hips trying to flip open when isolated in deep middle role, limiting range. Has good ability to drop the hips and come to balance as a tackler in the open field. Optimizes tackle radius with loose shoulders and effective tilt.

Feet/COD: Steps are deliberate and calculated. Does not often waste steps while working into a pursuit role, does well to transition and mirror ball carriers. Is not blessed with overly quick feet relative to peers at the Safety position.

Man Cover Skills: Is not going to show well when asked with playing man to man against receivers in the slot. Does not possess the hip mobility or the foot speed to transition out of a backpedal and carry routes down the field with speed.

Versatility: Has modest back end ability, much more effective in the shallows and as a robber defender in zone coverage. Has ability to play man coverage with tight ends, has physicality to stay tight on the hip whist carrying route stems up the field.

## FILM ASSESSMENT

Games watched: Mississippi State (2016), Mississippi (2017), Oklahoma State (2017), Louisiana Tech (2017)

Coverage Spacing: Has effective spacing when paired with strong anticipatory feel for route development has good ability to drive and challenge throws. Conservative vertically to ensure leverage is kept against deep targets and long developing routes.

Acceleration: Does not illustrate great burst but does have enough quickness with transitions to be a factor driving forward. Does not have great long speed, lacking in the needed second gear to fly open late and bait passers in zone.

Tackling: One of the more sure tacklers in the DB class as a whole. Aggressive, closes ground quickly and does well to run the feet at contact and push back ball carriers with notable oomph. Compact frame translates power from the pads into opposition consistently.

Zone Coverage IQ: Heady player who makes a lot of plus plays on the football with recognition skills and anticipation to shoot forward. Has a great feel for pressing into the body of WRs and timing challenges effectively to optimize effectiveness of ball hand.

Ball Skills: Length is concerning. Has found success playing the ball despite lack of length but should still be noted that wingspan and hand size are notably small, will get outworked by big bodies (TEs).

Competitive Toughness: Fearless player, not afraid to stick nose in the pile and mix it up in the trenches when dropping down as a pressure player or a nickel defender. Tackles extremely well for size and offers notable pop in the pads in open field.

Flexibility: Free moving athlete with good ability to drop the pads and hit with clean form tackling. Is a touch tight in the hips of big hinges up the field, but play at Safety helps to mask issues; should not be a prominent issue at the next level.

Feet/COD: Clean pedal and drop step, looks the part of a true technician working out in space when isolated in one on one coverage out of the slot. Confident in plant and drive ability, both vs. pass and when scraping over the top as a run defender.

Man Cover Skills: Has a history at CB and shows continued success as a man to man cover player in the nickel. Should have little issue with continuing that role against slot WRs at the NFL level.

Versatility: Multi-tool player. Effective as a blitz rusher from the nickel. Can play man to man in the slot. Has good deep skills and also shows effective play as a D-gap run filler when playing from the box. Can be a 3 down player and versatile piece in all packages.

## FILM ASSESSMENT

Games watched: Pennsylvania State (2016), North Carolina (2017), Virginia Tech (2017), Miami (2017)

Coverage Spacing: Is conservative on the back end to ensure sustained leverage when tasked with holding deep portions of the field. Strong efforts as a deep MOF defender in Cover 3 to be positioned to challenge and developing routes in MOF.

Acceleration: Straight line burst is strong. Capable of building notable speed in long pursuit situations but click and close to step forward on plays in front of face is just as good. Has nice twitch out of backpedal to recollect and gain forward momentum.

Tackling: Highly effective tackler, be it as a D-gap fill player at the LOS, in the open field after the catch or when addressing receivers at the catch point. Powerful hits create violent collisions, is a true tone setter in the secondary with power.

Zone Coverage IQ: Frequently used in the MOF, has a good eye for staying behind routes and letting things develop in front of face. Can make the most of skills from an overhang position to identify routes after the break and contest.

Ball Skills: Underwhelming ability to make the most of frame and physicality to jostle for positioning on targeted routes. Would like to see additional ball production courtesy of combative hand and optimizing body length to extend for the football.

Competitive Toughness: Very strong pursuit defender, can be seen flying in from the back side of a run in the secondary to challenge the ball carrier on the far side of the field. Physical defender who imposes will on opposition with heavy pads.

Flexibility: Does not have the most dynamic hips, can be more of a straight line athlete than a fluid open field rangy defender as a Cover 1 player. Will drop the pad level down at first contact and has no issue coiling into tackles.

Feet/COD: Feet are compact. Does well to stay balanced on base, although does not have the dynamic range of motion to step away from underneath feet and gather self with true high end suddenness. Transitions out of a backpedal to address the ball are very clean, optimizing movement.

Man Cover Skills: Foot speed in backpedal and some tightness in the hips will limit effectiveness to lock down receivers in the slot. Has good anticipation of route breaks from overtop and has physicality to develop into press reps at the LOS. Would require development.

Versatility: Has the feel of a true MOF Cover 3 Safety.
Range laterally could limit upside in additional coverage as a single high. Physical run defender. Can be tasked with blitzing off the edge. Has seen some prominent offensive reps in college, natural athlete.

SAF Combine Avg. (03-16): 6.98

- Short Shuttle: N/A SAF Combine Avg. (03-16):

Coverage Spacing: Has irregular results out in space. Will at times get nosey with eyes in the backfield and get feet stuck in the sand. Overly conservative in deep thirds, often times not a part of plays that take place in front of face away from LOS.

Acceleration: Very good burst and acceleration skills. Has the ability to get involved with plays in a hurry while driving into the LOS. Has a fair amount of range, most notable on the second level or with lateral mobility to go sideline to sideline.

Tackling: Booming hitter. Impressive acceleration through body of ball carrier. Wrap up efforts are strong. Fearless at the point of first contact against any and all comers, consistently drives ball carriers backwards in head up situations.

Zone Coverage IQ: Will need patience and development. Will take the cheese on play fakes and fake routes in the flats, is jumpy and eager to bounce down inside and try to make a play near the LOS. Is more effective in shallow zones as a free defender.

Ball Skills: Has missed a number of potential turnovers with poor ability to place the hands cleanly onto the football. Has not been put in position to make a high number of plays on the ball courtesy of conservative approach in deep zone.

## FILM ASSESSMENT

Games watched: Texas (2016), Texas Christian (2016), Oklahoma State (2017), Texas (2017), Iowa State (2017)

Competitive Toughness: Terrific pursuit and effort. Flies full tilt out of drop step to get into the action. Has made a number of hustle plays from the far side of the field with pure "want to". Physically impressive specimen, especially when striking on ball carriers.

Flexibility: Can struggle with transitions when tasked with hinging and opening on steep angles. Has great ability to coil and unlock hips through contact, both as a tackler and as a blocker.

Feet/COD: Feet are quick in straight line opportunities to accelerate. Needs to work on COD on the fly as a means of adjusting pursuit angles, can work too flat to ball and put too much trust in closing burst; losing contain as a result. Has ability to cut underneath blocks in the box.

Man Cover Skills: Modest off ball coverage ability. Does not have the needed mobility through the hips or footwork to be consistently locked up with slot receivers. Does have confidence in disrupting routes within the 5 yard area at the LOS.

Versatility: Is an impressive piece in the box. Effective blitzer from the nickel and high value run defender off the edge. Limited upside playing man to man as a nickel DB and will need patience and development to play more deep coverages with consistency and desired spacing.

## FILM ASSESSMENT

Games watched: UCLA (2017), Utah (2017), Purdue (2017)

Coverage Spacing: Has a good deal of range in the shallow areas of the field. Good feel for when to flow towards a route in the middle of the field in an effort to squeeze and remove a window. Possesses experience largely in a flex/ slot role.

Acceleration: Has good juice to play turn and run coverage if tasked with playing man to man with receivers out of the slot, impressive burst and long speed for a player of this stature. Has clean recovery balance as well if challenged and trying to work back into hip of receiver.

Tackling: Does not show reliable tackling habits in spite of strong production. Will be late to drop the pads and on numerous occasions has slid off of challenges of the ball carrier at the line of scrimmage. Would like to see more effort to align hips and pads and tackle square.

Zone Coverage IQ: Can take the cheese on routes flashing across face in some occurrences but when peripheral vision does well to regather eyes and find the proper placement. Would not task with usage as a deep player or last line of defense.

Ball Skills: Can struggle to locate the ball when tracking over the shoulder but has awareness to attack the hands of the receiver. Soft hands when able to get eyes cleanly on the football and has been effective as a buzz defender in the intermediate areas to convert turnovers.

Competitive Toughness: Is not a physical presence in the box, plays hard and with good pursuit to the football but does not have booming pads and often times will look to take the easy way out against blockers in one on one situations.

Flexibility: Body is loose but untamed. Has been caught trying to swim over blocks instead of coiling and using range of motion to explode or thrust into blockers. Has a clean hinge in hips to play turn and run and carry receivers vertically.

Feet/COD: Feet are a strong point. Has patience at the LOS and is effective in press coverage to stay in the face of the receiver without turning and bailing too quickly. Has good athleticism in traffic and ability to duck down and shoot a gap.

Man Cover Skills: Effective press man defender. Has the speed to turn and run, carrying receivers vertically with great effectiveness. Has good short area COD and can stay sticky on breaks mean to snap off separation into the middle of the field.

Versatility: Is a nickel hybrid defensive back. Does not have the run game skills to be called upon to effectively play near the LOS. 3rd Safety for more spread offensive packages would allow for optimal usage.

## FILM ASSESSMENT

Games watched: UCLA (2017), Wyoming (2017), Colorado State (2017), Senior Bowl (2018)

Coverage Spacing: Conservative back end defender with effective ability to stay leveraged overtop of routes in deep halves or third of the field. Does not have ideal single high range to play as a FS in the middle in Cover 1.

Acceleration: Does not have a great level of burst, fails to inspire with ability to kick into another gear when challenging the football over the shoulder or trying to work outside the numbers on deeper shots down the field. Non-aggressive playing up into the LOS as well.

Tackling: Wrap up tackler, is conservative as a back end player to ensure that he doesn't run out of position to finish a play or miss the tackle. That said, struggles to move feet in short areas and as a result will slip off of tackle attempts trying to mirror the ball.

Zone Coverage IQ: Disciplined on the back end. Has been tasked with rotating coverages and has shown the ability to stem coverage before the snap before hinging at the snap and bailing for a deep coverage to disguise and cross up QBs after the snap.

Ball Skills: High ball production, has converted a high number of opportunities into turnovers. Tracks the ball best when overhead of the throw and able to approach the pass while square to the line of scrimmage.

Competitive Toughness: Very physical at the line of scrimmage, was effectively implemented in press coverage the LOS to disrupt route releases. Shows good tackling strength when stepping up to tackle in the D-gap or on the edge.

Flexibility: Shows good hip mobility to open into the field or the boundary and carry routes while sustaining hands on receivers inside the contact window. Has a modest ability to play with maximum length but is not super pliable to create a high catch radius.

Feet/COD: Feet at the line of scrimmage are clean and effective, will shadow route releases from slot receivers (specifically vs. TEs) well. Does not have a great deal of explosion on redirection cuts or when tasked with mirroring ball carriers on shallow routes or runs.

Man Cover Skills: Can play physical press coverage against Tight Ends at the line of scrimmage. Has enough movement skills to stick with a majority of TEs. Would not recommend playing vs. slot WRs however, given limited lateral quickness and burst in short areas.

Versatility: Is a traditional Cover 2 strong safety prospect with the ability to step up into the box and attack blocks and wall off TEs in coverage. Has been utilized as a blitzer as well and does a good job of getting hands vertical to occupy throwing lanes.

## FILM ASSESSMENT

Games watched: Texas A\&M (2016), Clemson (2017), Missouri (2017), Georgia (2017), Central Florida (2017)

Coverage Spacing: Resides primarily on the second level as a robber and overhang run defender, not frequently tasked with playing out in space and being a deep coverage defender. Does not look to have the burst or range to reliably hold down a half of the field.
Acceleration: Does not have great long speed and acceleration in tight spaces is modest. Won't win by defeating blocks with quickness, rather needs to anticipate ball carrier flow and take strong angles to preemptively meet opposition down the field or in the hole.
Tackling: Terrific tackler, hits like a linebacker and shows great confidence to run the feet through contact and jolt the ball carrier. Often wins tackles by pushing back the ball and wins coming forward, but lateral tackle attempts can be hit or miss with finishing ability without pads behind effort.
Zone Coverage IQ: Is more of a visual pursuit player against the pass, must see the ball in delivery or see the route in front of face. Does not showcase a desirable level of route anticipation to flow laterally and squeeze throwing windows in the secondary.

Ball Skills: Tightness through the core and shoulders will limit ability to flip eyes back to the football with momentum carried away from the LOS. Lack of burst is problematic in springing into pathway of the football. Has a pleasant ability to finish turnover opportunities despite small hands.

Competitive Toughness: Impressive mental toughness, played through prominent shoulder injury in 2015 for full season. Very physical tackler and has ridden down much bigger receivers and ball carriers after first contact. Has pop in hands to jolt and shuck blocks.
Flexibility: Fairly linear as a pursuit player, struggles to show a dynamic base to suddenly change direction and shift across the face of a blocker. Shows tightness trying to hinge and bail off of the line of scrimmage when tasked with playing up in the slot.

Feet/COD: Is not an overly sudden or twitchy athlete, won't showcase a lot of burst out in space to take a bucket step and spring forward into the pathway of the football and contest throws in front of face.

Man Cover Skills: Has a fair level of physicality and is capable of getting up in the face of big receivers in the slot. Turn and run ability is compromised by only modest foot quickness and long speed.

Versatility: Is a nickel LB prospect but won't offer a lot in base personnel or as a deep back half defender. Is a bit too lethargic with range to warrant consideration as a high upside defender in the deep half or as a Strong Safety at the next level.

## FILM ASSESSMENT

Games watched: Ohio State (2016), Alabama (2017), Virginia Tech (2017), Miami FL (2017), Syracuse (2017)

Coverage Spacing: Effective usage in deep third and as a robber down in the box. Willing to fly close to the sun and stay tight to route stems, trusts transitions and speed to flip and carry if tested vertically. Has good short area quickness to accelerate to a throw.

Acceleration: Has a fair amount of juice when playing forward. Long speed is present to take advantageous angles and catch some ball carriers on chunk plays. Short area burst is good to quickly work to a spot and beat a blocker in run support.

Tackling: Overall has terrific tackling skills. Lapses are present in brief instances to stop the feet and eat a ball carrier with facemask but is a stout tackler when playing forward, is effective and takes good angles in the open field and is a notable presence at the LOS.

Zone Coverage IQ: Has patience in the MOF to hold water and not get snookered by first route to flash, illustrates eye discipline to stand firm and read the Quarterback. Should be allowed to prowl MOF in intermediates and split difference of routes before attacking throws.

Ball Skills: Has not found a lot of opportunities to play the ball in the air. Is typically a rally defender who arrives late, has little exposure to having to contest catch points and play through the hands of receivers. Several flashes have come on deep targets (Alabama vs. Calvin Ridley).

Competitive Toughness: Fearless buzzing down into the box. Does not, however, always keep the feet moving as a tackler and can give soft ground on the second level.
Physical to play through contact and fight way into a the play as a tackler.

Flexibility: Is not super bendy but offers ample mobility in the lower half to plant and drive with some steep angles. Capable of dipping the pad level down effectively to get leverage as a tackler.

Feet/COD: Effective COD defender to mirror ball carriers in the open field. Has shown very strong lateral quickness to shift weight and stay in front of a targeted receiver or a ball carrier emerging through the hole. Has good spring off of bucket step to drive forward.

Man Cover Skills: Has noted physicality to step into the LOS and disrupt within the contact window. Has some fluidity to turn and run but can be shaken effectively without eyes in the backfield. Will need to stay leveraged overtop of the route.

Versatility: Has successfully handled role as a deep Safety and MOF defender. Two way defender of the pass and run and illustrates great rally to the football and help clean up plays. Physically stout with a fair level of range and burst.

## FILM ASSESSMENT

Games watched: Tennessee (2016), Clemson (2017), West Virginia (2017), Miami FL (2017)

Coverage Spacing: Will get caught flat footed and struggle to carry routes if playing further away from the football. Does not have a great deal of short area quickness or lateral fluidity to hinge and pivot to contest a target if thrown across his face.

Acceleration: Does not have any particular burst or explosiveness, when driving on a throw or when stepping down from a deeper portion of the field to attack a run. Has build up speed and a respectable long gear but no burst to close spaces quickly.

Tackling: Very good tackler, particularly when down inside the box, shows good balance to take on ball carriers head up. Would like to see better initial angles from further pursuit launch points to find a more direct pathway to the football.

Zone Coverage IQ: Has had route adjustments blow past area of influence with too much frequency. Will see routes developing but offers little to no anticipation as to how to mirror or counter as route stems work through space and into a vacant area.

Ball Skills: Has collected a fair amount of ball production and has good habits when pressed on the hip of receivers. Shows good extension and ability to contact receivers at just the right time. Issues stem from movement skills to stay in an attacking range of throws.

Competitive Toughness: Strong presence in between the tackles, effectively stepping down to squeeze and square up ball carriers between the hashes. Physical at first contact and shows ability to tightly contest receivers at the catch point as well.

Flexibility: Very tight through the hips and core. Struggles to work head back around to locate the football when asked to play turn and run coverage. Transitions in off ball platforms result in labored hinge up the field and conceded separation.

Feet/COD: Feet are not especially quick, particularly in coverage. Steps and transitions are labored and cannot redirect momentum when dropping away from the LOS with suddenness. Has good habits to shuffle and stay square to the LOS scraping over the top of runs.

Man Cover Skills: Sporadically flexed out into the slot or boundary but does not have the short area quickness to hinge and run on route breaks. Was regularly targeted in 2017 games where locked up in man to man coverage.

Versatility: Is not going to offer a lot of value on the back end, looks like a box safety and package specific defender, at least early on. May stand a better chance to transition to LB due to a subpar range of mobility to turn and mirror receivers in space.

## FILM ASSESSMENT

Games watched: Iowa (2017), Michigan State (2017), Pennsylvania State (2017)

Coverage Spacing: Limited in range and ability to change directions with suddenness. Has difficult time reaching landmarks and as a result must cheat deep and will be stretched for throws attacking the seam or in between levels in the intermediates.

Acceleration: Non-explosive, will not provide ability to fill vs. the run if tasked with playing deep portions. Struggles to turn and run and carry deep routes as a deep defender as well, is stuck between levels as far as athletic abilities will allow.

Tackling: Stiff tackler in tight spaces but run fills from deep portions are skewed by inability to close down with quickness. Struggles to shift and slide weight laterally, will be slipped from a balanced posture if squaring up tackles too soon.

Zone Coverage IQ: Has poor peripheral vision, often times caught guessing where receivers are by reacting to something developing directly in front of face. Has to be more aware of surroundings and route pattern concepts to feel passing windows.

Ball Skills: Has good linear vision and times leaps well. Showcases good extension, however leaping ability is limited to high point throws over head. Struggles with click and close to drive on the football from a leveraged platform.

Competitive Toughness: Respectable pursuit effort and does illustrate good strength with challenging ball carriers in head on situations. Ability to push off blockers is effective out in space.

Flexibility: Very tight dropping off of the LOS, has issues with hinging the hips and gaining depth into the backfield with pace. Will be forced to take eyes off passer or labor significantly trying to buzz off of initial platform and find desired landmark.

Feet/COD: Lethargic feet. Has issues with gaining ground on first step, requires several steps to transition weight and get momentum moving forward. Laterally slow and has issues with scraping overtop as a pursuit defender.

Man Cover Skills: Is too tight and restricted with mobility to be tasked with playing turn and run coverage on slot receivers or tight ends. Will struggle to hold on and mirror down the field on route breaks.

Versatility: Compromised by unathletic skillset. Needs to be protected vertically and laterally, likely confined to nickel LB interior reps on defense as a specialist but will need to find way to make impact with ST.

## ESPN3 -

ESPN3 provides NDT Scouting with available broadcasts cached on demand and also provides alternate video views of game action.

What a year this has been. The continued growth we experience as we journey our way through the NFL Draft media sphere is surreal each and every time I stop to think of it. I, of course, would not be able to say NDT Scouting stands where it does now without the help and support of many, many people. I'd like to recognize them here.

To my staff (Jon, Ben, Jonah, Scott, Brandon): Thank you. Meeting people in life with a passion that is equal to mine has reaffirmed that I have found my calling. Working with you to shake up the landscape and challenge everyone to provide better coverage and content is a blast. We are just getting started.

To my friends, family and loved ones : Your willingness to allow me to go AWOL for six months out of the year is incredibly selfless and does not go unnoticed. Ultimately, there's no way I can get to where I want to be professionally without this commitment, which you encourage to no end.

To John Owning: You took a chance on me with FanRag Sports, which has led to an immeasurable amount of growth in the past 18 months. You've challenged me to be more than a scout and accept what media can do for me. I hope I've answered that call and met your vision for me.

To FanRag Sports: You all were the first outlet to see what we do and think that it could be something worth investing in. Not asking us to write for you, but rather truly invest in us with your time and capital. Thank you.

To Joe Marino: The only person I know who works harder than I do. You impress me with your tenacious work ethic, enthusiasm and the ease for which you present information. I can't think of another person who I'd rather have hitched my wagon to in order to make our way to the top of the Draft world. It's only a matter of time, my friend.

To you, the readers: I'd be nowhere without the people who have become so enthralled with our work. It would have been incredibly easy for me to barge onto the Twitter-sphere, chat up prospects, attempt to start a block and fall back into my comfort zone. But the amount of people who were so quick to encourage me reinforced this passion, allowing me to cultivate this vision and dream.

## Thank you. Until next year,

$\qquad$
